DURANITE MOLDED TUBULAR CAPACITORS • TYPE P-88

Toughest capacitors ever offered for radio-electronic equipment. DURANITE capacitors are entirely new—in design, impregnant, processing, and casing. New technique glove-fitting contact and seal throughout. DURANITE provides a permanent, non-varying, rock-hard casing, does not dry out, does not develop cracks or fissures. Pig-tail leads firmly imbedded, won't pull out, won't work loose. Moisture-proof; operate from sub-zero to over 212°F. Exposure to temperatures of 250°F. will not impair life or performance, no deterioration on the shelf.

LO-VOLTAGE TYPE 84

Lo-voltage, type 84 units are wax-impregnated, wax-sealed capacitors in paper cases. These capacitors are available with HYVOL H impregnation for operation at temperatures from 70°C. up to 85°C. For over 600 VDC, and 85°C. operation units are available with HYVOL M impregnation. Units are obtainable with a radial mounting band on request at extra cost.

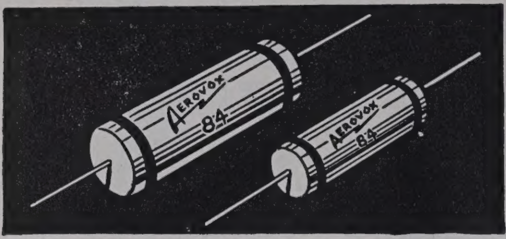
CAPACITORS AEROVOX RESISTORS

HI-VOLTAGE • TYPE 84 • TUBULAR PAPER CAPACITORS



Hi-voltage type 84 oil impregnated, tubular capacitors are compact high-grade units. Overall wax dipped for high resistance to humidity.

Units rated from 2500 VDCW and up are designed to meet the elevated peaks and transients encountered in television and other cathode-ray tube applications and to reduce the effects of corona.

These high-voltage units are encased in cardboard tubes with tinned wire leads, and have an improved end-seal for longer life under operating conditions to which they are subjected. Supplied with radial mounting band at no extra cost.

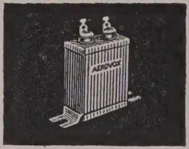
Compact, immersion-proof unit, of minimum size and weight. Corrosion-proof metal container. Special immersion-proof terminals for severe atmospheric and climatic conditions. Type 16CT is standard, but Type 16CB (terminals on bottom) units also available.



COMPACT HYVOL* CAPACITORS • TYPE 18CB

Compact, immersion-proof unit. Different base sizes make units adaptable for duals and triples. Even on single sections, different base sizes make units fit in particular applications where Type 16's do not fit. Type 18CB is standard, but Type 18CT (terminals on top) also available.

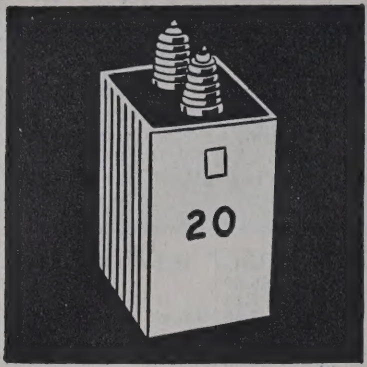
A compact superior-grade oil-impregnated, oil-filled, drawn-metal case capacitor. Hermetically sealed, immersion-proof. Built for severe operating conditions as in aircraft, police, broadcast, public address and other types of communications equipment. The Aerovox-designed terminals are constructed with "doublerubber bakelite" insulators permanently riveted to the case, and make a sturdy, absolutely immersion-proof assembly.

TYPE 20 • HIGH VOLTAGE TRANSMITTER CAPACITORS



High quality oil-capacitors designed to meet the exacting service requirements of communications and electronic equipment, and general DC applications in industrial equipment. Single capacitors or parallel grouped capacitors available in ratings from 6000 to 50,000 VDCW. These units consist of precision wound, adequately insulated sections connected in parallel and assembled in heavy, welded copper bearing steel tanks, designed to expand or contract with changes in temperature. Finished in long lasting dark grey lacquer. Heavy duty, wet process porcelain insulator assemblies are gasketed, pressure sealed, and oil-filled to prevent internal creepage and corona. The assembled units are heat vacuum dried, vacuum impregnated with Aerovox Hyvol and hermetically sealed for long life under exacting, operating conditions. Single units rated at 30 KV or less are normally supplied with the capacitor element insulated from ground. Type 20 units not carried in stock but are built to order. Submit full application information when ordering.

Aerovox type P123ZNG Aerolene impregnated metallized-paper capacitors housed in tubular metal cases with vitrified ceramic terminal seal. Operating temperature range -55°C to +100°C at full rating with operation to +125°C at 75 per cent of voltage rating.

NOTE: For insulated section (insulating terminal at both ends) — specify type P123ZN — add 1/16 inch to lengths listed above.

For mounting bracket add Suffix "B" to type designation.

For threaded terminal mounting add Suffix "T" to type designation.

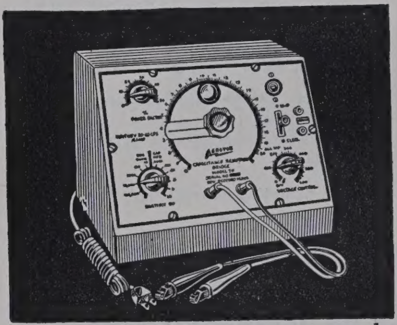
TEST INSTRUMENTS



Aerovox Capacitance and Resistance Bridge

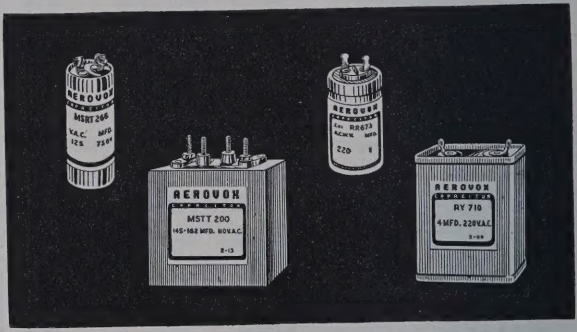
AEROVOX MODEL 76 Resistance Capacitance Bridge is the new postwar general-utility instrument combining simplicity of operation, remarkable degree of accuracy, and modest price. Extreme ruggedness makes it equally suitable out on the job, in the shop, or in the laboratory.

Sloping panel 10" x 6". Aluminum, etched and anodized. Steel cabinet, black crackle finish. All readings taken from main 4" dial. Same calibrated scale eliminates trouble and chances for errors in reading. Linear scale, also an exclusive feature, means no crowding at high end to make readings difficult and inaccurate. Both the resistance and the capacitance readings are covered by six overlapping ranges, as against two or three in usual service instruments, for maximum sensitivity and accuracy. Positive "magic eye" indicator.

Here is what Model 76 bridge does: (1) Measures capacitance from 100 mmf. to 200 mfd. in six ranges. (2) Measures resistance from 10 ohms to 20 megohms in six ranges. (3) Measures power factor from 0 to 50%. (4) Provides D.C. polarizing potential for leakage measurements, from 0 to 600 V.D.C., continuously variable and calibrated in volts. (5) Checks leakage or insulation resistance.

Instrument is provided with shockproof, color-coded test leads fitted with banana plugs for panel jacks, and with clips. Instructions. Measures 10" x 7¾" x 8¼". Weight 8 lbs. 3 oz.

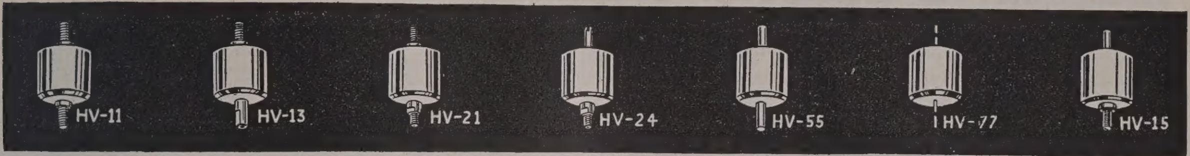
Aerovox *Motor-Starting* Capacitors



A TYPE FOR *EVERY* APPLICATION

Aerovox motor capacitors are available in two general categories: (1) Exact-Duplicate Replacements, precisely matching the mechanical and electrical features of the original equipment; and (2) Universal Replacements, for a minimum stock of numbers taking care of the maximum range of motor applications. Exact-Duplicate Replacements do the "same-as-new" service job insisted upon by critical customers. Universal Replacements mean maximum convenience with minimum investment. And of course Aerovox also supplies the hardware, housings, caps, mountings.

HI-Q HIGH VOLTAGE CERAMIC CAPACITORS • TYPE HV



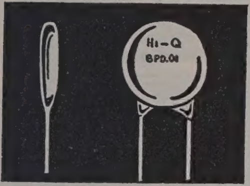
TYPE	MMFD.	VOLT	LIST
HV	500	10,000	$1.75
HV	500	20,000	2.25

These Hi-Q high voltage capacitors of the slug type (thick disk dielectrics) are thoroughly tested units capable of assuring dependable service while withstanding high voltages.

The piercing pressure of the dielectric material is greatly decreased by a meticulously exacting jacketing procedure in conjunction with a newly developed plastic with excellent arc resistant properties. Terminals are silvered brass and integrally soldered to the silver electrodes which are fired directly to the ceramic dielectric.

The HV capacitors provide an excellent working parameter when used in conjunction with high voltage horizontal output transformers.

HI-Q DISK CAPACITORS • TYPE BPD



Hi-Q disk capacitors are available in 7 sizes for by-passing, blocking and coupling applications. Hi-Q disks are also available for temperature compensating where high Q and stability of capacity are essential and there is also a line of Hi-Q disks where extended temperature compensating applications require a very large gradient of capacity versus temperature.

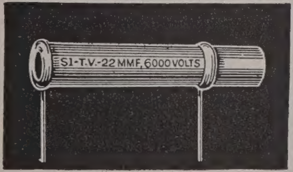
SI-TV HIGH VOLTAGE CERAMIC CAPACITORS



A new addition to the already complete line of Aerovox Hi-Q Ceramic capacitors. Especially adapted to television applications this capacitor is available in two sizes. For capacities from 4.7 mmf. to 30. mmf. the size is .312 x 1.125. For 47. mmf. the case size is .385 x 1.850. All units referred to here are 6000 Volts.

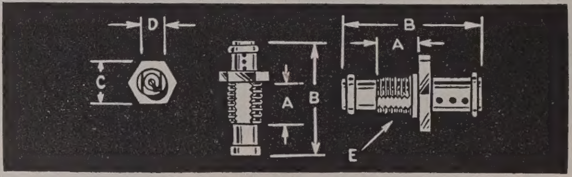
HI-Q FEED-THRU CAPACITORS



Hi-Q Feed-Thru Capacitors provide means to transmit thru shields or ground potentials and simultaneously by-pass unwanted frequencies. A good mechanical connection is provided by the silver-plated bushing. These are excellent dependable units even under severe mechanical vibrations as in aircraft, missiles and automotive requirements. The minimum standard tolerance for feed-thru capacitors is ±20%. All units are flash tested at 1000 volts D.C.

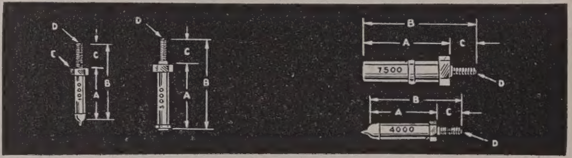
HI-Q STAND OFF CAPACITORS



Hi-Q "stand-off" capacitors are tubular with a screw fixture for mounting to the chassis or common ground. Close coupling and their unique construction make them an excellent choice for by-passing R.F. in the high frequencies.

The multiple tapped model is a compact, by-passing unit when mounted next to tube sockets. Three capacitors can be supplied as one unit, with capacity ranges available up to 2000 MMF per section. When fewer than three taps are required, it is possible to obtain higher capacities. Standard capacity tolerance is ±20% and GMV for "stand-off" capacitors and —20%, +30% and GMV for multiple tap units. Closer tolerances are available on the lower capacity units wherever economical manufacturing permits.

All units are flash tested for 1000 V.D.C., power factor is under 3% maximum and the insulation resistance is above 7500 megohms. All units are coated with a polymerized high temperature enamel, stamped for capacity and supplied with a nut, if desired. Leads are 20 gauge and a minimum of 1½″ long for CS units and 1¼″ for CIS units.

HI-Q TUBULAR CERAMIC CAPACITORS

STYLE SI: Style SI provides a radial lead unit for applications requiring an insulated capacitor. Performance is comparable to that of insulated capacitors manufactured in accordance with JAN and REC specifications.

STYLE CI: Tubular ceramic capacitors, in three standard sizes, insulated with a ceramic (Steatite) cover-tube sealed with a special end seal which allows the wax, vacuum impregnant to enter and thoroughly fill all voids inside the cover tube. Axial leads in three sizes to meet all requirements of the JAN C20A specifications for insulated capacitors.

STYLE CN: Style CN is not listed but is available. It identifies the non-insulated tubular ceramic capacitors as established by the Armed Services Electronics Standards Agency (JAN C20A) and (RMA, REC107) specifications. This style capacitor has radial leads and is coated with a high moisture proof, low factor, non-hydroscopic styrene resin.

HI-Q ZERO TEMPERATURE COEFFICIENT CAPACITORS

The temperature coefficient of ceramic capacitors is an inherent characteristic of the ceramic body. By controlling this coefficient, the use of ceramics has been extended to countless applications in the electronic and communications fields. Temperature coefficient is determined by the ceramic mix and therefore certain tolerances are standardized. Following is a list of standard recommended tolerances used in this listing:

Temp. Coef.	Tolerance—PPM
NPO	± 30
NO80	± 30
N750	±100

The tolerances shown are maximum deviation. The actual average temperature coefficient usually runs close to nominal.

NPO TYPE SI

The zero temperature coefficient capacitor is the most stable ceramic commercial capacitor available. The type SI is a tubular ceramic insulated with a synthetic coating (Durez) and impregnated with a high-melting point, Low-loss, micro-crystalline wax.

When ordering the above units, designate type and MMFD fully. For example: NPOSI-1-1.5 MMFD.

For full information on coding and characteristics refer to ASESA chart on page 25.

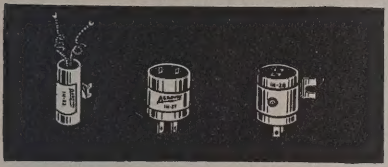
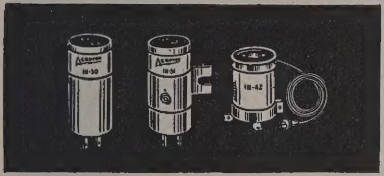
INTERFERENCE FILTERS



TYPE IN-23. Especially used for neon sign fixtures. Convenient mounting bracket. One filter for each fixture. Flexible leads. Also used on small motors. Size 1 x 2⅛ inches. **List $1.05**

TYPE IN-27. Simple, inexpensive, plug-in unit where interference is slight. Size 1⅜ x 1½ inches. **List $1.50**

TYPE IN-28. For use where ground is at considerable distance. Most efficent when mounted on appliance. Bracket supplied. Size: 1⅜ x 2 inches. **List $2.00**



TYPE IN-29. Effective plug-in unit for local noise sources of variable character but strong intensity. Especially suited for shavers and other vibrating devices. Size: 1⅜ x 3 inches. **List $1.75**

TYPE IN-30. Similar to IN-29 but with greater inductance to handle more severe noise interference. Size: 1⅜ x 3 inches. **List $2.50**

TYPE IN-31. Bracket mounted unit with high inductance. Size: 1⅜ x 3 inches. **List $3.00**

TYPE IN-42. Heavy duty unit for serious interference from power transmission lines, etc. Plugs into outlet. Appliance or radio plugs into receptacle in filter. Mounting ring provided. Rating: 110/220 v. AC; 6 amps. Size: 2½" dia. x 3¾". **List $7.50**

UHF — INTERFERENCE FILTERS

These latest filter units provide maximum attenuation from 150 KC well up into the UHF range. And they are extra-rugged, extra-compact, extra-efficient, by any comparison with previous filters.

Primary applications are in r.f. noise suppression work in military or commercial aircraft and for vehicular low-voltage d.c. applications. Also, for special applications such as battery or low-voltage d.c. filters, for shield room applications, and for critical equipment.

Available in seven standard types meeting a wide variety of applications. For extraordinary requirements, special filters can be developed and built to your order.

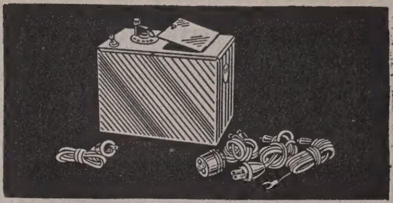
INTERFERENCE ANALYZER

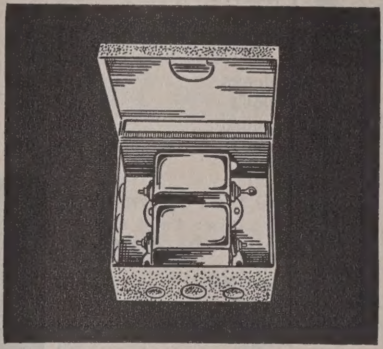
TYPE ANL-37

The Aerovox Filter Selector eliminates the guess work in determining the proper filter to use. Plugs between interfering device and outlet. Adjust selector switch until noise is eliminated or minimized. Dial then indicates type filter (IN27 thru IN42) to be used.

Unit in handsome, sturdy metal cabinet. Compartment contains necessary attachment plugs and clips. Size: 5½ x 5½ x 8 inches.



HEAVY DUTY INDUSTRIAL FILTERS



Heavy duty, industrial-type interference filters consisting of one or more highly efficent radio noise filter elements. Enclosed in black painted steel surface cabinet for permanent installations of power equipment. One element per line. Cabinets meet Underwriters' requirements, and have standard knockouts. Rating: 250 v. AC —25 to 60 cps. or 600 v. DC.

TYPE IN-109. Balanced network filter for severe r-f noises from small appliances. Metal container and four insulated, stranded wire leads. Case common for grounding. Rating: 125 v. AC or DC; 2.5 amps. Size: 1⅞" x 3" x 1⅜" high. **List $3.80**

TYPE IN-133. Hermetically sealed, metal cased unit — bracket mounted. Delta-connected capacitor combination for connecting across line. Excellent for use in areas near radio stations. 6" insulated stranded wire leads. Can common for grounding. Rating: 125 v. AC or DC. Size: 1⅞" x 1 5/16" x 15/16" high. **List $1.75**

BUILT-IN FILTERS

High attenuation type, hermetically sealed units for use where severe interference is encountered and dependability is required. For permanently mounted applications.

Aerovox special "Pi type" construction insures efficient radio noise reduction over low frequency broadcast, shortwave, and television bands. Suitable for Army-Navy or aircraft equipment where immersion and severe humidity tests must be met.

For single wire unbalanced applications. For two wire filtering use one filter in each line. Filter case must be securely bonded to the filter appliance and ground for maximum efficiency. These filters when used on high-voltage AC should be used only on permanently grounded equipment.

These radio-noise suppression capacitors have been especially designed for use in military or commercial, aircraft and vehicular applications. Primary application is as an r-f bypass capacitor from line to ground in low voltage dc supply lines. Units are especially treated to assure extremely long, noise-free life.

Operating temperature range is minus 55 degrees C to plus 95 degrees C. For full 150 volt rating the operating temperature range is minus 55 degrees C to plus 50 degrees C. Units may be used at operating voltages up to 120 vdc over a temperature range of minus 55 degrees C to plus 71 degrees C; and 60 vdc over a range of minus 55 degrees C to plus 95 degrees C.

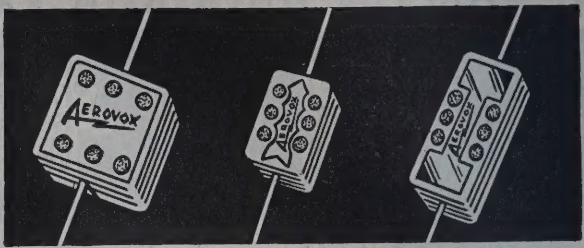
CAPACITORS AEROVOX **RESISTORS**

SILVERED MICA CAPACITORS



AEROVOX silvered mica units for most critical applications where precise capacity values are required. Encased in red low-loss bakelite. Similar in external appearance to standard bakelite molded mica units.

Available with temperature coefficient and retrace characteristics as defined by characteristics A to F inclusive of REC-115 and JAN-C-5 specifications for molded capacitors. Exceptionally high "Q." Mechanically protected against physical damage and changes in electrical characteristics due to varying atmospheric conditions. Wax impregnated externally. Ideal for circuits where inductance and capacity product must remain constant under all operating conditions.

AEROVOX RESONANT CAPACITORS

Again the radio-electronic art imposes still more critical capacitor requirements. This time it's adequate bypassing of IF circuits in order to keep IF frequencies from entering such circuits and causing troublesome squeals and howls. And Aerovox comes up with the new AEROVOX RESONANT CAPACITORS.

AEROVOX RESONANT CAPACITORS, Series RC, are now available in conventional paper tubular design, wax impregnated and wax sealed as follows:

CAT. #	MFD.	WVDC	O. D.	LIST
RC2	.05	400	½ d. x 1⅛	$.50
RC3	.1	400	½ d. x 1⅝	.65

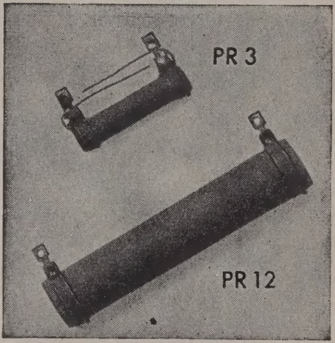
WIRE WOUND FIXED RESISTORS



To satisfy the most exacting needs of the Radio and Electronic Industries, Wirt Fixed Wire-wound Resistors are regularly furnished in PHENOCOTE protective coatings, developed and steadily improved over a period of many years in the Wirt Laboratories. The resistor wire is space wound on low loss ceramic tubes. The PHENOCOTE covering is an exclusive organic cement coating offering maximum protection to the resistance winding against the detrimental effects of moisture, humidity and electrolysis. Absolutely inert chemically, it will not effect the most delicate windings. It is particularly recommended for fine wire sizes and all applications where the maximum temperature of the unit will not exceed 300° F. These Resistors are universally used in the Radio, Electronic, Instrument, Public Address and Test Equipment fields.

WIRE WOUND ADJUSTABLE RESISTORS

WIRT Adjustable Resistors are space wound on low loss ceramic tubes to which the resistance wire is bonded, resulting in dependability and long life. Protection of the windings is afforded by the PHENOCOTE covering which is described fully on the preceeding page. One adjustable Slider Band, screw driver type, is furnished as standard. Bakelite knob type bands can be furnished on special order at slightly higher prices as shown below. These bands are made with small contact buttons located on the inside of the band so that a number of taps may be made without shorting out excessive resistance.

AUTO RADIO IGNITION SUPPRESSORS

Wirt Suppressors are made with moulded black bakelite housings. All metal parts are made of rugged unfinished brass. Terminals are securely fastened to casings and sealed with special moisture and heat resisting dielectric cement. Resistor pills are sprayed with zinc and then double impregnated with a special moisture-proofing compound. Resistance value of all standard types is 10000 ohms ±20%; for FV8 types 50000 ohms ±20%. The distributed capacity is less than 1.5 mmf. Resistance values will not change more than 7% after being submerged in water for 100 hours. Test by sparking 1800 times per minute at 10,000 volts for 100 hours produces resistance change of not more than 3%. Wirt Suppressors are impervious to heat, oil, moisture and mild acids, and will not change in resistance more than 10% in 50,000 miles of operation.

WIRT SLIDE SWITCHES

General: All Wirt Slide Switches are compact and sturdy. Housings are made of steel and are cadmium plated. The physical dimensions of the switches have been standardized, width 35/64", length 1-13/32" and mounting centers 1⅛". Standard buttons are of black bakelite. All contacts and terminals are silver plated. Switches SW723 and SW725 are supplied with a dot which indicates the "On" position. These switches are used in the Radio, Signal, Phonograph and Instrument industries.

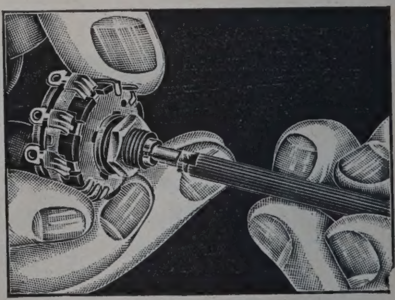
PICK-A-SHAFT CONTROLS



★ Clarostat Pick-A-Shaft, as shown at left may be used with any AM, AT, AK, or AG control. Easily attached in the field. Merely insert and tap lightly. Shaft locks securely and permanently.

Choice of Pick-A-Shafts

★ A choice of Pick-A-Shafts (shown at right) covers all requirements, as follows:

Cat No.	Description
(1) SS-⅜" length	(Male) to take female fitting
(2) RS-2	Round shaft, 2" long
(3) KSS-3	Knurled, split shaft 3" lg.
(4) RS-5	Round shaft, 5" long
(5) FS-5	Flatted shaft, 5" long
(6) KSS-5	Knurled, split shaft, 5" lg.
(7) FS-3	Flatted shaft, 3" long
(8) RS-3	Round Shaft, 3" long
(9) DFS-½	Double flatted Philco Type ½" long
(10) FKS-¼	Fine knurled slotted shaft ¼" long

List price of each shaft..............................$0.30

One selected shaft furnished FREE with each Pick-A-Shaft control.

SERIES SWB AD-A-SWITCH FOR "G," "AG," "K" AND "AK" CONTROLS

For the first time a switch is offered for installation in the field to popular-sized 15/16" controls. Now the serviceman does not have to stock all the popular controls in duplication—with switches and without switches.

These switches add to all Clarostat Series K, AK, G and AG controls in a matter of seconds for a permanent, excellent assembly. All are rated at 5 amperes at 125 Volts A.C.

★ Handy, inexpensive, ceramic-cased midget wire-wound resistors for tight spots, especially with point-to-point wiring. These tiny resistors take the place of more cumbersome and costlier bracket-mounted units. This "junior" version of the well-known Greenohm power resistors features a wire winding on fibre-glass core, 1½" axial pigtail leads, and a steatite protective casing sealed with exclusive Greenohm cold-setting inorganic cement. This resistor will not blister, crack, or change shape. Type C7GJ, 1¾" long by 5/16" dia., rated at 7 watts. Smaller Type C4GJ, 1" long by 5/16" dia., rated at 4 watts. In characteristic Greenohm green, with printed values on casing.

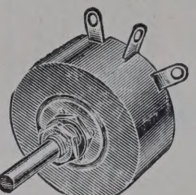
POWER RHEOSTATS



★ Exceptionally rugged. Trouble-free design. Withstands severe overloading without smoking, burning, charring. Element imbedded in cold-setting cement. Resistance winding supported on insulated metal core for maximum heat conduction and radiation, even at partial rotation settings. Single-hole mounting. Adjustable locking pin firmly anchors unit against bodily rotation. Shaft and bushing insulated from current-carrying arm for safety. 25 and 50 watt sizes.

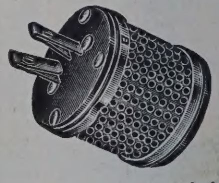
CLAROSTAT SPECIAL ITEMS

★ Clarostat Mfg. Co. Inc. is now the leading manufacturer of precision wire-wound and composition-element controls. This type of item is not listed herewith. However, engineering bulletins and technical data are available upon request.

Clarostat Mfg. Co., Inc. is now engaged in a miniaturization program and controls of either wire-wound or composition element as small as ⅝" diameter are available.

Clarostat precision controls are available as single units or multiple units. Special mechanical requirements such as bushings, water-tight bushings, slip-drives, etc., can be met by Clarostat. The Clarostat engineering department will give prompt and full attention to any control problems you may wish to submit.

AUTOMATIC LINE-VOLTAGE REGULATORS



★ A device that minimizes line-voltage surges or increases up to 140 volts. Does not raise voltage. At the normal 110-volt line voltage the resistance of the unit is low and the voltage drop across it is negligible. However, as the line voltage increases, the resistance of the unit increases proportionately, with a constant increase in voltage drop across it. This control operates on the ballast action principle.

Dimensions are 1¾" dia. x 1¾" long.

Standard female and male receptacle.

Standard packing—Ten (10) to a carton.

db steps are 3, 6, 9, 12, 15, 18, 21, 24 and 30. Absolutely noiseless and distortionless in operation.

★ Developed to meet the need for a constant-impedance attenuator capable of handling considerable power without measurable insertion loss, Series CIB attenuators provide linear attenuation with ample power-handling capacity.

These units are rated at 10 watts when used on DC or constant frequency signals. However, they have successfully been used up to 30 watts on audio circuits.

Compact, capable of safely handling the rated wattages at any setting of the dial, these units are recommended as an output level control for power amplifiers or as an input attenuator for individual or group speakers in a public address system. Linear attenuation is provided in steps of 3 decibels up to 30, with final step to infinity.

Unit is furnished in black baked-enamel metal casing, 2" in diameter by 2¾" long, equipped with dial plate and bar knob. Not available with power switch. One-hole mounting ⅜" diameter bushing. Shaft 1" long.

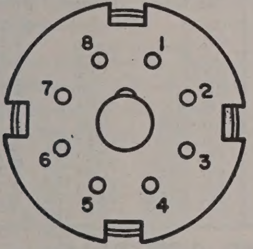
CLAROSTAT RTV PROGRAM

★ Clarostat has made available through their distributors the most comprehensive and complete program for identification and supply of television controls and resistors. This program includes the availabillity of over 99% of all controls used in 2500 different TV receivers.

These exact-duplicate replacement controls are factory-assembled, ready-to-install units.

Complete cross-reference manuals and supplements are available through Clarostat distributors. Listings as to the frequency of use of the various units are included to prevent the overstocking of the less popular models.

TUBE-TYPE WIRE-WOUND RESISTORS



★ Clarostat developed and pioneered the tube-type resistor for voltage-reducing purposes and for supplying needed voltage for pilot lamp operation in AC-DC receivers. Strictly non-inflammable, with the resistance element wound on a mica form firmly secured in the metal tube and connected with the base prongs, the Clarostat construction is notably superior to others.

To simplify servicing of receivers using tube-type resistors, Clarostat has selected the most popular values for so-called Universal numbers serving most replacement needs. Standard resistor tubes of the most popular types are also listed below.

In connection with listings, the following nomenclature applies: Prefixes: K denotes 6.3 volt 150 ma. No. 40 pilot lamp.

L denotes 6.3 volt 250 ma. No. 46 pilot lamp.

M denotes 6.3 volt 200 ma. No. 51 pilot lamp.

The numeral indicates total voltage drop across resistance unit.

Suffixes designate:
A—No pilot lamp taps.
B—1 pilot lamp tap for 1 lamp.
C —1 pilot lamp tap for 2 lamps.
D —2 pilot lamp taps for 2 lamps.
E —3 pilot lamp taps for 3 lamps.
E1—1 pilot lamp tap for 3 lamps.
F —1 pilot lamp tap for 1 lamp.
G —1 pilot lamp tap for 2 pilot lamps. (Tapped sections isolated from main reducing body.)

H —2 pilot lamp taps for 2 pilot lamps. (Tapped section isolated from main reducing body.)

The letter "J" following any of the suffixes denotes a shorted connection between 2 prongs of the tube, i.e., K-67-BJ, the short is located between Nos. 3 and 4 prongs.

Care must be exercised when replacing any tube whose number ends in "J", as the shorted pins are not always as in above example. Some are between Nos. 6 and 7 prongs, and others between 5 and 3.

When replacing any plug-in resistor tube with a Clarostat Universal type, note prongs missing on replaced tube and cut off corresponding prongs on the Universal Replacement tube.

The numeral indicates total voltage drop across resistance unit.

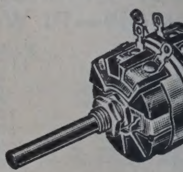
CONSTANT IMPEDANCE CONTROLS

★ Self-compensating volume controls or attenuators known as L-pads and T-pads are essential in eliminating the distortion that arises from the mismatching of impedances in broadcast transmission, sound recording or public address systems. With Clarostat constant-impedance L-pads and T-pads the input and output impedances of associated equipment in a circuit can be kept within the limits of a constant required value.



These pads have a continuous range from 0.5 to 30 decibels attenuation in 90% of rotation, the last 10% affording infinite attenuation. Employable at either the source or the load in a circuit (see diagrams) these units are readily one-hole mounted. They afford a wide range of uses as mixers, faders, multiple-speaker controls, etc. Such controls can be used as individual volume controls for multiple-speaker systems, without affecting or changing the source impedance.

These units are rated at 2½ watts when used on DC or constant frequency signals. However, they have successfully been used up to 10 watts on audio circuits.

SERIES 10 WIRE-WOUND CONTROLS

★ Series 10 wire-wound controls rated at 4 watts. All units are of linear taper. Molded bakelite case same dimensions as Series 58 with the exception of depth which measures 31/32″. Switch units attached at factory. Can be ordered in any ohmage from 1 ohm to 100K ohms. For example if a 4-watt 100-ohm control is desired it would be ordered as a 10-100 ohm. For prices on Series 10 add 60c to the list on the Series 58 control. For Series 10S controls, add the price of the switch to the price of the Series 10 controls. In accordance with RTMA standards, overall tolerances are plus/minus 10% for all values.

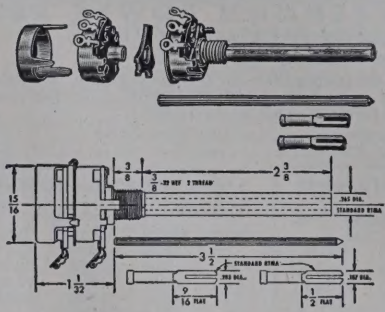
Dual Midgetrol Volume Controls and Accessories



Mallory Midgetrol Volume Control Parts and Accessories enable the serviceman to duplicate the physical and electrical characteristics of hundreds of Concentric Shaft Dual Carbon Controls, Single Shaft Dual Carbon Controls and Concentric Shaft Dual Wire-Wound Carbon control combinations for fast replacement in TV, home and auto radio sets. Supplied as separate front and rear control sections, these parts are easy to assemble, practical and economical, and eliminate delays while waiting delivery of manufacturer's original controls. UF is 15/16" diameter carbon front section; UR is 15/16" carbon rear section; WF is wire-wound front section. A kit of standard assembly parts is supplied with each front section. For accessory fittings and switches, see page 2, Mallory Resistors and Controls Section, this catalog. Average mounting depth behind panel for a carbon dual is 1⅛"; with switch, is 1⅝".

Explanation of Mallory Tapers

Taper Number 1 is a modified logarithmic left hand taper in the carbon type of control and an approximation to this logarithmic taper in the wire-wound type. This taper should always be used in shunt circuits, as in usual antenna and audio circuits, or where only the center and left hand terminals are used.

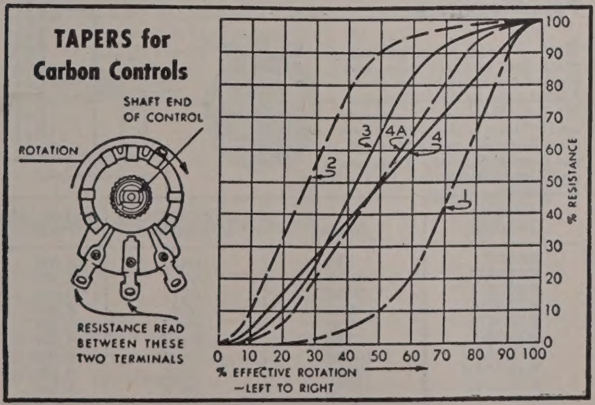
Taper Number 2 is a right hand logarithmic taper in the carbon and an approximation in the wire-wound type. Used in series circuits, as in cathode voltage controls, or where only the center and right hand terminals are used.

Taper Number 3 is a combination left and right hand taper. Has a limited use in circuits where the control must perform both as a shunt and as a series circuit control as in combination antenna shunt plus bias circuits. This is the most common use for such a taper.

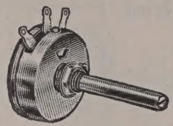
Taper Number 4 is a linear taper. Strictly speaking it is not a "taper" although commonly referred to as such. A linear "taper" is used wherever a control should be such that voltage change is proportional to the degree of rotation.

Taper Number 4A is a modification of the regular linear taper Number 4.

Taper Number 7 is made only in the wire-wound type of control and is a form of left hand taper. This taper is desirable for the antenna shunt plus bias control, wherein greater attenuation is obtained by increasing the bias voltage. The slight left taper then suffices to gradually reduce the signal to zero volume by the shunting action in the antenna circuit.



TV Focus Controls



These 1 5/8″ diameter units are designed especially for focus control replacement in TV sets. They are 4 watt, wire-wound, and have a special taper. One control, plus accessories and complete instructions per display carton.

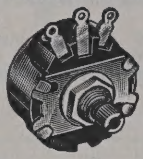
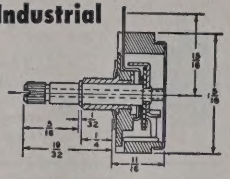
Variable Wire-Wound Potentiometers and Rheostats

Two Watt Wire-Wound TV and Industrial Potentiometers





For replacement of positioning, hold and focus controls in TV. Also ideal for industrial circuits up to 1500 volts AC. Completely enclosed in 1⁵⁄₁₆″ diameter phenolic case. Thumb-knurled ¼″ diameter, ⁵⁄₁₆″ long, screw driver, slotted, insulated shaft. All have linear resistance change.

For special 3″ extension shaft, DS-36, see page 2, Mallory Resistors and Controls Section, this catalog.

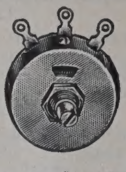
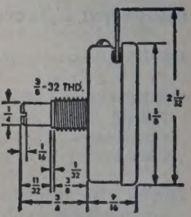
Four Watt Wire-Wound Potentiometers and Rheostats





Four-watt, wire-wound controls designed especially for low voltage TV, test equipment, industrial and electronic applications. These controls are supplied with a ⅜″ long bushing and have ¼″ round screw driver slotted shafts ⅜″ long. Overall case diameter is 1⅝″. Mounting radius, including solder lugs, is 1¼″ and mounting depth is ⅝″. Rheostat styles have "off" position. All have linear resistance change and insulated shaft. For Dial Plate No. 395, see page 4, Mallory Resistors and Controls Section, this catalog.

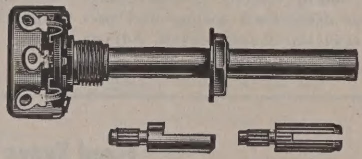
NEW MALLORY MIDGETROL

SINGLE SECTION

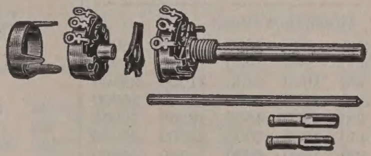


Now the *time-proved* Mallory Midgetrol offers two important new time-saving features.

This sturdy 15/16" control is supplied with a *permanently fixed, tubular brass shaft* that can be adapted for split-knurl or flatted type knobs in a few seconds by inserting one of the two steel shaft-ends packaged with every Mallory Midgetrol. It gives you utmost convenience—without sacrificing a stable, permanently secured shaft.

Also, switch attachment is made simple and sure by positive indexing. Switch locks securely in position without removing the control housing.

DUAL SECTION



This revolutionary new control can be assembled in five easy steps, in less than five minutes—permits you to match a wide range of combinations immediately from convenient distributor stocks, and without high "time" costs.

The "exploded" view above illustrates the parts and assembled control sections supplied. Extremely simple instructions show you how to assemble them quickly and surely—without soldering—with only the simplest of tools.

Both front and rear sections are *factory-assembled and carefully inspected.* You can be sure that your final dual assembly will give the performance you want!

The Mallory Midgetrol gives you fast, sure, simple installation—with precision-controlled carbon element, smooth taper, quiet operation, accurate resistance value and less drift in TV sets.

INSULATED RESISTORS

Preferred for Performance

ADVANCED TYPE BT
INSULATED COMPOSITION RESISTORS

IRC Advanced Type BT Resistors are supplied in 4 miniature units from ⅓ to 2 watts. They are particularly suited to television requirements. Extremely low operating temperature and excellent power dissipation are assured. All types, except BTR, are clearly stamped with value and wattage, plus color code.

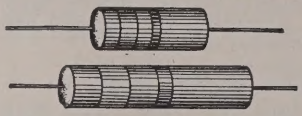
INSULATED CHOKES



IRC Insulated Chokes are available in two sizes designated as types CLA and CL-1. Both types are fully insulated in molded phenolic housings for full protection against high humidity. The insulated housing also guards the winding from abrasion and physical damage, and prevents any possibility of shorting to chassis. Color coded for easy identification.

The wide range of size and characteristic combinations available permits accurate replacement with respect to space and electrical requirements.

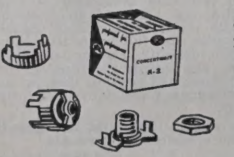
NEW, SIMPLIFIED CONCENTRIKITS FOR LESS-THAN-A-MINUTE ASSEMBLY OF TV CONCENTRIC DUALS

Two new, four-piece CONCENTRIKITS of improved design—plus a full line of Exact Duplicate Shafts, Base Elements and Switches—provide less-than-a-minute assembly of concentric dual replacements. Both carbon and wire-wound replacements are covered for more than 5,000 TV models—at a fraction of the cost of factory assembled controls. Assembled CONCENTRIKIT replacements are IRC Exact Duplicate Controls.

No other device on the market gives such wide replacement coverage at such low stock cost. Each control you assemble requires only two Base Elements, and a pair of Shafts plus CONCENTRIKIT. (In some instances, a switch also is needed.) IRC's Replacement Listing by Trade Name Part Number (Form SO12—available on request) gives complete listing of parts needed for each manufacturer's part number.

K-2 CONCENTRIKIT



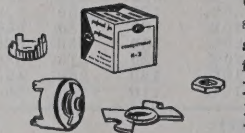
For assembly of concentric dual controls having two carbon sections. Contains four parts: Panel Cover, Rear Cover, Bushing and Mounting Nut. Assembly instructions included. Requires following additional parts, depending upon specification desired:

2—Base Elements (Type B)
1—Outer Shaft (Types P1 or P2)
1—Inner Shaft (Types R1, R2, R3, or R4)
1—Switch—when needed (Types 76-1 or 76-2)

LIST $.80

(KS-2 Universal Shaft Kit may be used with K-2 CONCENTRIKIT in place of Special Replacement Outer and Inner Shafts.)

K-3 CONCENTRIKIT



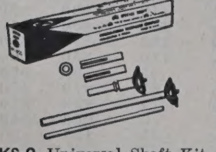
For assembly of concentric dual controls having wire-wound panel section and carbon rear section. Contains four parts: Panel Cover, Rear Cover, Ground Plate and Mounting Nut. Assembly instructions included. Requires additional parts, depending upon specification desired, as follows:

1—Panel Base Element (Type W)
1—Rear Base Element (Type B)
1—Outer Shaft (Types P3 or P4)
1—Inner Shaft (Types R1, R2, R3 or R4)
1—Switch — when needed — (Types 76-1 or 76-2)

LIST $.80

(K-3 Universal Shaft Kit may be used with K-3 CONCENTRIKIT in place of Special Replacement Outer and Inner Shafts.)

UNIVERSAL SHAFT KITS FOR CONCENTRIKIT



For use with CONCENTRIKITS in place of Exact Duplicate Shafts. Require shaft modification to desired specification. KS-2 Shaft Kit with K-2 CONCENTRIKIT are equivalent to former K-1 CONCENTRIKIT. Shaft Ends E-187 and E-202 are included in both Shaft Kits.

NEW EXACT DUPLICATE SHAFTS FIT WITHOUT ALTERATION

IRC Exact Duplicate Shafts are ready for assembly into completed concentric duals. No filing, slotting, soldering or cutting required. No special tools needed. Shafts are supplied in proper lengths and with factory-tooled ends for satisfactory fit. Accurate specifications are assured. Both inner and outer shafts are of one-piece construction with contactors attached.

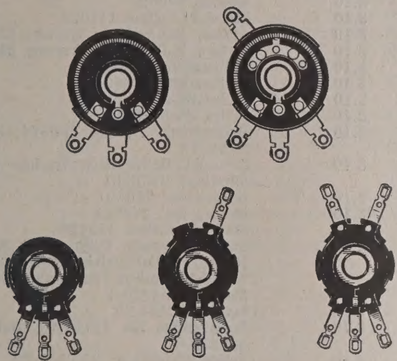
BASE ELEMENTS FOR CONCENTRIKITS



New Base Elements for CONCENTRIKITS are a revolutionary advance in concentric dual replacement. A relatively small stock at low investment provides wide coverage of electrical requirements in many concentric duals. Each unit is a complete molded control base with element, terminals and collector ring installed. There are no loose parts. Two Base Elements are required for each concentric dual.

Two types of Base Elements are available: Type B for panel or rear carbon sections and Type W for wire-wound panel sections.

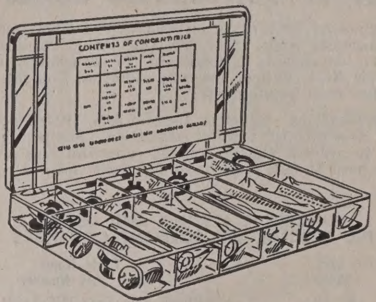
NEW CONCENTRIPAKS COVER MAJOR TV SETS



IRC CONCENTRIPAKS are practical assortments of CONCENTRIKITS, Base Elements, Exact Duplicate Replacement Shafts, and Switches selected to meet concentric dual requirements of specific brands of TV sets. CONCENTRIPAKS afford wide coverage of replacement needs at a fraction of the cost of factory-assembled controls for the same coverage.

Contained in an extra heavy plastic stock box with 11 compartments and sturdy hinged top, each CONCENTRIPAK includes complete replacement data, showing manufacturer's part and stock numbers, IRC parts required for control assembly, pricing guide.

CONCENTRIPAK FOR PHILCO — KC-1

Replaces any one of 13 Philco concentric duals plus specific controls of 11 other widely sold makes. Contains both K-2 and K-3 CONCENTRIKITS, 9 selected Base Elements, 18 Exact Duplicate Shafts and Switch and replacement data. **List $17.00**

CONCENTRIPAK FOR RCA — KC-2

Replaces any one of 14 RCA concentric duals plus 36 part number listings among 15 other makes. Contains K-2 CONCENTRIKIT, 10 selected Base Elements, 8 Exact Duplicate Shafts and Switch and complete replacement data. **List $12.40**

CONCENTRIPAK FOR ADMIRAL — KC-3

Replaces any one of 14 Admiral concentric dual controls plus additional controls for Packard Bell, Sparton and Stromberg Carlson. Contains K-2 CONCENTRIKIT, 10 selected Base Elements, 8 Exact Duplicate Shafts and 2 Switches. Replacement data included. **List $13.00**

NEW DEALER CONCENTRIKIT STOCK CABINET — ASSORTMENT #14

Wide-coverage, low cost dealer stock of CONCENTRIKIT parts. Provides coverage of 240 concentric dual listings — equivalent to 149 different concentric duals. Contained in sturdy four-drawer, all metal stock cabinet with 28 prominently labeled compartments. Full replacement data on stock coverage is included. Contains 30 selected Base Elements, 34 Exact Duplicate Replacement Shafts, 4 K-2 CONCENTRIKITS and 3 Switches. **Coverage:** Supplies replacement coverage among 59 trade names, including RCA, Emerson, Admiral, Philco, Crosley, G.E. and many others. **List $44.60**

295 FACTORY-ASSEMBLED EXACT DUPLICATES FOR WIDEST COVERAGE OF TV CONCENTRIC DUALS

Specially engineered for servicemen who want factory-assembled control for replacement work, these new IRC Exact Duplicate Controls provide broad, dependable coverage of TV concentric duals. Sets covered include RCA, Philco, Emerson, Admiral, Dumont and almost all of the other most popular sets.

Accurate Specifications. Made for specific sets, IRC Exact Duplicate Replacement Controls fit without alteration. Shafts are accurately dimensioned to prevent slip or wobble. Specifications are precise—so there's no need to cut, split or spread shaft ends.

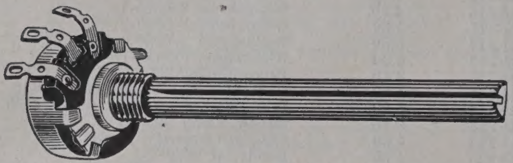
VOLUME CONTROLS

Preferred for Performance

NEW TYPE Q



RADIO TECHNICIAN'S VOLUME CONTROL

A new volume control engineered to meet the needs of modern radio and TV replacement. Compact $\frac{15}{16}$" design is augmented with shorter bushing, only ¼" in length. This tiny control will meet all small set requirements, and yet is capable of handling large receiver replacements. "Cushioned turn" rotation and quiet element combine to provide a modern control of the highest quality.

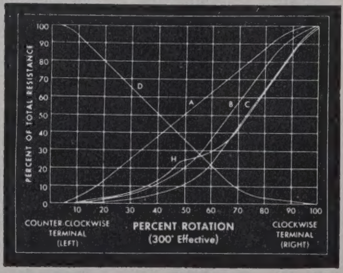
KNOB MASTER FIXED SHAFT. This is the standard Q shaft. It is a FIXED shaft, and handles most knob requirements. Knurled, flatted and slotted, it fits knurled and spring-type push-on knobs or set-screw knobs. 3" long with ample cross-section to prevent bending.

INTERCHANGEABLE FIXED SHAFTS. Quick replacement of standard fixed shaft to fit any of 13 Interchangeable Fixed Shafts provides ready conversion to "specials." This revolutionary feature is made easy by the new IRC Resilient Retainer Ring. These special FIXED Shafts offer all of the advantages of Tap-in Shafts with the added security of fixed shafts. Widest replacement coverage is made possible with a minimum stock. These special shafts are illustrated and explained on the following page.

5 STANDARD TAPERS

A—Used as potentiometer or rheostat in any circuit where uniform resistance change is required.

B—A semi-logarithmic curve used as tone control or audio circuit control.



C—A logarithmic curve. Used as audio circuit control or antenna shunt control.

D—Tapered at both ends to provide control of grid bias and antenna circuit. Used where control of grid bias is of prime importance in controlling volume.

H—A tapped logarithmic curve used as audio level control for automatic bass compensation.

NEW IRC TV CONTROL MANUAL

IRC's TV Control Manual includes comprehensive listing of both standard and concentric dual replacements for TV Controls. Also lists concentric dual replacements for home and auto radios. Manufacturer's Part Number Listing includes both the new IRC CONCENTRIKIT and IRC EXACT DUPLICATE CONTROL replacements. Form S086A. Available from your IRC Distributor. **Price $.50**

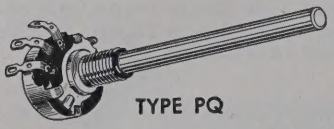
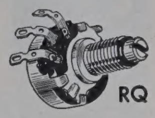
DISTRIBUTOR CONTROLS FOR INDUSTRY



TYPE PQ



RQ

IRC Distributor Controls for Industry offer commercial users a wide selection of resistance values and two industrial shaft types. Shafts are fixed. This combination of wide selection of values and speedy Distributor delivery holds many advantages for industrial purchasers. These Industrial Controls are adaptations of the new, compact $\frac{15}{16}$″ Q Control. Power rating is ½ watt, 500 volts maximum. Electrical rotation is the same with or without switch. ⅜″ bushing is brass and held to close tolerance for snug shaft fit.

Terminals are heavily tinned for easy soldering, and may be bent without becoming noisy. Two locating lugs are provided, either or both of which may be bent down if not needed. Molded base. Both Types PQ and RQ are supplied in standard tapers.

TYPE PQ. Full round ¼″ shaft, approximately 3″ from mounting face, with ⅜″ long bushing. 19 stock available in 33 stock values as shown. Regular IRC stock numbers are used with prefix PQ.

List $1.25

TYPE RQ. Very short screw-driver slot shaft, ¼″ diameter and approximately ½″ long from mounting face with ⅜″ long bushing. Available in 33 values as shown. Regular IRC stock numbers are used with prefix RQ.

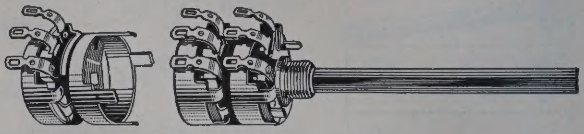
MULTISECTIONS FOR STANDARD DUALS



IRC MULTISECTIONS are complete control sections that can be added like a switch to any Q, PQ or RQ Control. With these units, the Radio Technician or Engineer is provided with an endless variety of dual, triple or even quadruple controls. Duals assembled from IRC MULTISECTIONS will accommodate Type 76 switches. Availtble in a selection of 20 values, as shown in following table. Each MULTISECTION adds $\frac{19}{32}$″ to basic control.

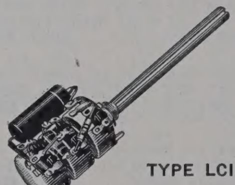
CONTINUOUSLY VARIABLE LOUDNESS CONTROLS



TYPE LCI

IRC Type LCI Continuously Variable Loudness Controls actualy bring high fidelity tone to commercial audio systems — even at whisper level! Only three connections are needed to install the new Type LCI Loudness Control. No special taps or complicated circuits are required. Type LCI's eliminate the need for tapped volume controls, stepped-type loudness controls, bass and treble boost circuits. Type LCI's do what these other devices have failed to do.

IRC Loudness Control also can be easily assembled with a standard IRC Type Q Volume Control and two Multisections. Simple assembly instructions are included with each Multisection. All parts, etc.

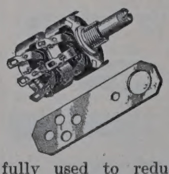
NEW IRC TV ATTENUATOR
Type QJ-3 — FOR ADJUSTMENT OF SIGNAL INPUT



Where excessive signal strength causes poor reception, IRC's Type QJ-3 TV Attenuator readily permits adjustment of signal input at the set. This new attenuator has been successfully used to reduce or correct such undesirable conditions as: Adjacent channel interference — Background pictures on weaker stations — Horizontal or vertical patterns in picture — Poor picture definition — Annoying hum or buzz — Picture and sound breakover. Type QJ-3 is easily installed in any TV set.

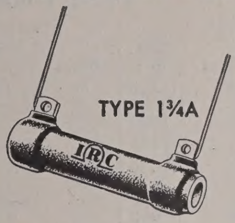
IRC

IRC FIXED AND ADJUSTABLE POWER WIRE WOUND RESISTORS

TYPE 4½EA



TYPE 1¾A

IRC Power Wire Wounds are rugged resistors specially engineered for dependable heavy duty performance. They are full size, thus continuous operation at full rated power can be maintained. Derating at high resistance values is unnecessary. Special IRC cement coating is noted for its rapid heat dissipation, and protection against humidity. Operating temperatures are lower, thus assuring long life.

All terminals are hot tin dipped for easy soldering. 10 and 20 watt sizes use combination lead and lug terminal from which lugs may be cut for tight space applications. Clear, permanent markings show type, size, watts and resistance. Tolerances: Fixed Types—standard ± 5% for 50 ohms and over, ± 10% below 50 ohms. Adjustable Types—standard ± 10%.

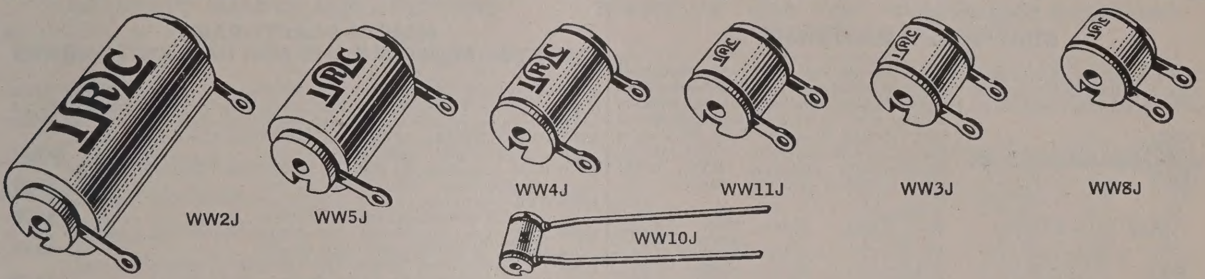
NEW PRECISION WIRE WOUND RESISTORS



An all new line of precision wire wound resistors for both old and new applications. Completely interchangeable with the long established and familiar types WW-2, WW-3, WW-4, and WW-5 plus new sizes all surpassing JAN-R-93 characteristic B specification.

New Winding Technique developed by IRC engineers provides winding control that substantially eliminates the effect of the human element thus eliminating possibility of shorted turns or winding strains. All wire used in the construction of precision resistors is subjected to rigid insulation tests of the enamel coating. Particular attention is given to insure transfer of wire to winding form without strain or break in insulation. Many production tests insure high quality in the finished resistor.

New Concept of Insulation — The winding is multiple vacuum impregnated with a new compound developed by IRC chemists, which has the unique characteristic of remaining approximately the same consistency throughout the entire range of temperature to which the resistor may be subjected. It is neither glassy hard nor tacky soft under any condition so that wire strains are minimized. This is conducive to a higher degree of stability and freedom from noise. This impregnant also provides a very excellent humidity protection to, insure long life under all environmental conditions.

Tolerance — 1% is standard. For special tolerance on all types except WW-10J, add to prices shown as follows: Add 10% for ½% tolerance (2 ohms and over); add 15% for ¼% tolerance (5 ohms and over); add 25% for 1/10% tolerance (20 ohms and over). On Type WW-10J, add 10% for ½% tolerance (65 ohms and over); add 15% for ¼% tolerance (200 ohms and over); add 25% for 1/10% tolerance (1500 ohms and over).

Temperature Coefficient — Minimum temperature coefficient of .003% per degree C, from 0°C to 100°C, is standard on all IRC Wire Wound Precision Resistors.

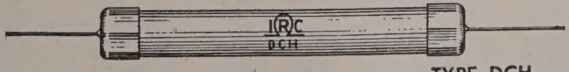
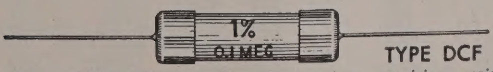
CLOSE TOLERANCE PRECISTORS



TYPE DCH



TYPE DCF

New IRC PRECISTORS are deposited carbon precision resistors offering a unique combination of close tolerance, stability and economy. Pure crystalline carbon is bonded to selected ceramic cores producing a resistor ideally suited to the requirements of instrumentation, advanced electronics and critical television circuits. Guaranteed accuracy ± 1%. DCF is rated at 1 watt. DCH is rated at 2 watts.

IRC PRECISTORS are specially packaged in plastic tubes for protection.

CONTROLS

BLUE SHAFT RADIOHMS

The newest, most widely accepted line of 15/16" modern carbon type controls. Switch types are factory assembled and tested, for smoothest action and instant usefulness. Distinctive blue, anodized aluminum shafts, 3" long with universal fluted full length mill. Rating ½ watt. Type BSK units have 2⅛" brass split knurl shafts. Switches are universal DPST, easily wired for SPST or 3 wire usage.

MODEL "V" AND "VK" WIREWOUND RADIOHMS 3 WATT LINEAR TAPER

Model "V" smooth action wirewound controls, are regularly furnished without switches. Attachable switches are available, as listed in Column 1. 1 7/16″ diameter, 9/16″ depth behind mounting surface. Shafts: "V"; 3″ fluted mill; "VK"; ⅜″ fingertip knurl and slot. "VK" series not adaptable to switch type.

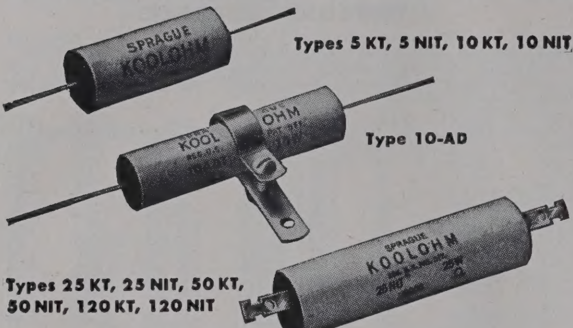
KOOLOHM® WIRE-WOUND RESISTORS



Types 5 KT, 5 NIT, 10 KT, 10 NIT

Type 10-AD

Types 25 KT, 25 NIT, 50 KT, 50 NIT, 120 KT, 120 NIT

- Wound with wire which is insulated **before winding** with a flexible ceramic coating. This coating is impervious to heat as high as 1000°C.
- Each resistor is "tropicalized" by a glazed ceramic outer coating and new type end seals which offer complete protection against moisture or any other climatic conditions
- May be mounted anywhere—even flat against chassis or grounded parts
- Extremely high insulation resistance—10,000 volts from surface of ceramic jacket to inner resistance elements
- Insulated wire permits winding higher values in layers, which means much smaller physical sizes for each wattage rating
- Insulated wire permits true "non-inductive" wound designs

NOTE: ALL NIT TYPES ARE NON-INDUCTIVE

Continental's "Carbomite" type M resistors meet all the requirements for a fixed, stable and rugged resistor. The insulated bakelite shell has a 1000 volt breakdown test and will not short out when stacked together. Instant solderability with a touch of a soldering iron is another of the features of this resistor. They are packaged in boxes of 10 and 50 in the ½ watt and 1 watt sizes and 10 and 25 in the 2 watt size. Standard RTMA Color Coding is marked on each unit. Both 5% and 10% tolerance resistance values are carried in stock.

Continental's type WM resistors are wound evenly to prevent shorting of turns. A minimum of .0015 inch wire is used for the winding. The terminals are securely and permanently connected to the winding. They are resistance to moisture. The WM resistor is recommended for circuits requiring very low resistance which is not ordinarily available in the carbon style. Packaged in boxes of 10 or 50 each.

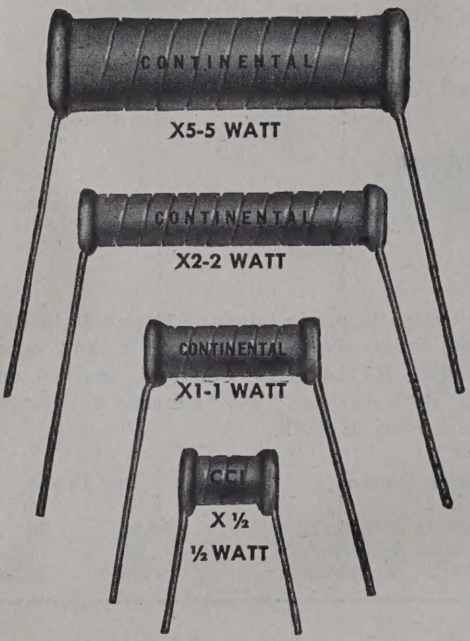
"Nobleloy" X-Type Resistors

Trade Mark Reg.



- **Not Wire Wound**
- **Not carbon!**
- **Stability of Wire Wound and Equivalent**

After several years of research work CONTINENTAL engineers have developed a new resistor involving the metal film principle, having the accuracy of a wire wound unit. Absolutely no carbon whatever is used in the fabrication of these resistors. The metallic resistance film is formed on the surface of a low loss ceramic tube using a patented pyrochemic process.

The metal film thus formed is hermetically sealed by a layer of vitreous enamel specially developed and patented by CONTINENTAL. The ceramic tube with its associated film is then spiralled to give a long resistance path and to accurately calibrate the unit to value.

Since the ceramic tubes are hollow they allow a larger surface for heat radiation, thus permitting the resistor to withstand overloads of 200% or better.

The copper-tinned lead terminals are soldered to extremely low resistance metal contact films which in turn are integral with the resistance film, thereby reducing contact resistance to a minimum. This type of construction produces a resistor unit having not only excellent resistance stability but also a negligible noise characteristic.

Small Size

- **Accurate Fixed Non-Wire Wound**
- **Metal Film (Not Carbon)**
- **Axial Leads**
- **Stability of Wire Wound**

A miniature type precision resistor for use in applications calling for initial accuracy and good stability has been developed for the Components and Material branch of the Signal Corps Labs., Fort Monmouth, New Jersey, under contract. This resistor, designated as Continental type NF, employs a Nobleloy film resistance element deposited on a low loss ceramic carrier. The film is protected by a layer of vitreous enamel thus insuring protection against unusual atmospheric conditions. The axial type leads are securely fastened to the ends of the resistor thus assuring positive contact. The resistor is calibrated to value by means of spiralled grooves cut into the film to increase the resistance path. The NF resistor, having good stable characteristics, is particularly adaptable to circuits requiring close tolerance, and is recommended for uses where paired composition resistors are now used.

SUPPRESSORS

ALL SPARK PLUG SUPPRESSORS AND DISTRIBUTOR SUPPRESSORS EACH LIST PRICE $0.30

CONTINENTAL SUPPRESSORS have been subjected to years of laboratory development and actual road service. They effectively remove noise interference from spark discharge at the plugs and high-tension distributor—yet do not in any way affect the motor car ignition system.

They have mechanical strength to stand the most severe service. The resistance value of 10,000 ohms has been scientifically determined. Sparking across the terminals is eliminated by careful shaping of the electrodes and cases.

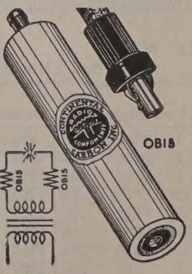
OIL BURNER SUPPRESSOR



Filternoys Suppressor OB15, carbon element type, intended for use only with the high tension spark ignition of oil or gas burning heating systems. Must be connected in series with each line to the spark gap. Size of the suppressor 3½″ x ¾″ diameter. Universal connections at both ends for solderless contact.

OB15............List Price $1.80

VITROHM RESISTORS

Wire wound resistors, sturdy construction, using low temperature coefficient materials. Coated with Ward Leonard's own crazeless Green Enamel.

AXIOHM RESISTORS

5 WATTS – TYPE 5X
10 WATTS – TYPE 10X

Vitreous enameled wire-wound resistors with 1½″ tinned copper leads for self-mounting.

The same fine materials used in the manufacture of Ward Leonard Vitrohm Resistors are used in making Axiohms.

Order by Type Number and Resistance Value.

OTHER STOCK RESISTORS

Plaque Type — Available in three sizes, 25-watt, 50-watt, and 150-watt.

Disc Type — Available in 24-watt size.

Non-Inductive Type — Available in three sizes, 35-watt, 80 watt, and 160-watt.

For complete information on all our stock resistors ask for our Catalog D-130.

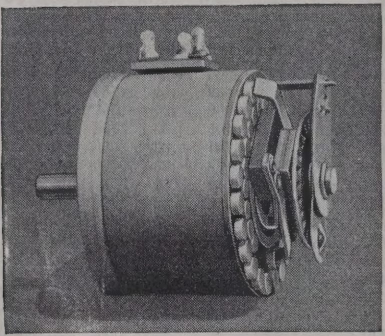
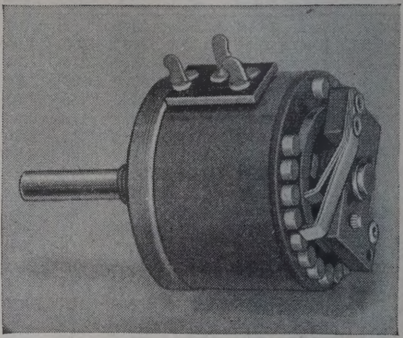
SHALLCROSS AUDIO ATTENUATORS



◄ SHALLCROSS ATTENUATOR NO. 420-2B2

SHALLCROSS ATTENUATOR NO. C720-2A3 ►



These Shallcross Features Mean

✓ BETTER PERFORMANCE
✓ BIGGER VALUE

- ✓ Off position attenuation well in excess of 100 db.
- ✓ 25% to 50% fewer soldered joints.
- ✓ Noise level ratings that are factual. (130 db or more below zero level).
- ✓ Non-inductive Shallcross precision resistors used throughout assure flat attenuation to and beyond 30 kc.
- ✓ Types and sizes engineered for all needs. Attenuation accuracies of 1%, resistor accuracies of 0.1%, on special order.

Shallcross Audio Attenuators are available in either variable or fixed units, the former often being referred to as a "control" and the latter, as a "pad".

Controls are available with as few as 5 steps or as many as 52 steps with an attenuation as small as 0.1 db per step. The total attenuation for a single control does not exceed about 125 db since such high attenuation approaches the noise level of the switching mechanism.

The complete story of Shallcross attenuators may be found in Shallcross Engineering Bulletin #4, copies of which are available on request. Specifications and prices are given below for a few of the most popular variable attenuators.

IMPEDANCE: 150, 500, 250/500, 600 ohms, except potentiometers, which are 100,000 and 250,000 ohms.

RESISTORS: All non-inductively wirewound, ±5% tolerance, except types preceded with "C", which are composition selected to ±5%.

ATTENUATION: Increases for counter-clockwise rotation of knob end of shaft.

FREQUENCY RESPONSE: Flat over entire audio range.

SWITCH MECHANISM: Multi-leaf wiper arms, collector rings and contacts available in tarnish resistant silver alloy or brass. Noise level −130 db.

DETENT: Indexing mechanism available on any unit for $0.75 list. Back of panel depth is then increased 5/16″.

DIALS: $1.50 list each additional.

KNOBS (VA-16906): $0.60 list each additional.

120-2A3 **$ 9.50 silver** **10.50 brass**	Ladder attenuator, 20 steps, 2 db per step, tapered on last 3 steps to off. MOUNTING: single hole, ⅜″-32 threaded bushing or two hole, 6-32 screws, 1⅜″ centers. DIMENSIONS: 1¾″ diameter, 1¾″ back of panel depth. CONTACT SPACING: 15°.
C720-2A3 **$ 9.50 silver** **10.50 brass**	Potentiometer, 20 steps, 2 db per step, tapered on last 3 steps to off. MOUNTING: single hole, ⅜″-32 threaded bushing or two hole, 6-32 screws, 1⅜″ centers. DIMENSIONS: 1¾″ diameter, 1¾″ back of panel depth. CONTACT SPACING: 15°.
132-1.5B3 **$16.50 silver** **18.00 brass**	Ladder attenuator, 32 steps, 1.5 db per step, tapered on last 3 steps to off. MOUNTING: two hole, 6-32 or 8-32 screws, 1¼″ or 1½″ centers. DIMENSIONS: 2⅛″ diameter, 1¾″ back of panel depth. CONTACT SPACING: 10°.
430-1C1 **$29.00 silver** **27.00 brass**	Bridged T attenuator, 30 steps, 1 db. per step, 30 db total. MOUNTING: two hole, 6-32 or 8-32 screws, 1¼″ or 1½″ centers. DIMENSIONS: 2½″ diameter, 1¾″ back of panel depth. CONTACT SPACING: 11¼°.
430-1.5C3 **$29.00 silver** **27.00 brass**	Bridged T attenuator, 30 steps, 1.5 db per step, tapered on last 5 steps to off. MOUNTING: two hole, 6-32 or 8-32 screws, 1¼″ or 1½″ centers. DIMENSIONS: 2½″ diameter, 1¾″ back of panel depth. CONTACT SPACING: 11¼°.

C820-2B2 **$21.50 silver**	Dual potentiometer, each section 20 steps, 2 db per step, attenuation linear with off on last step. MOUNTING: two hole, 6-32 or 8-32 screws, 1¼″ or 1½″ centers. DIMENSIONS: 2⅛″ diameter, 1¾″ back of panel depth. CONTACT SPACING: 15°.

SHALLCROSS V.U. METER RANGE EXTENDING ATTENUATORS

IMPEDANCE: Available with input impedances of 3900-7100-7500 ohms. Output impedance is 3900 ohms to match Weston Type 30B or General Electric Type DO 61 V.U. meters.

TOLERANCE: ±1% except "C" types which are ±5%.

INSERTION LOSS: Zero.

DETENT: All units supplied with indexing mechanism; back of panel depth includes detent.

C35-4A4 **$16.00 silver** **15.00 brass**	T attenuator, 0, +4 to +20 V.U., 5 steps, 4 V.U. per step. MOUNTING: single hole, ⅜″-32 threaded bushing. DIMENSIONS: 1¾″ diameter, 2-1/16″ back of panel depth. CONTACT SPACING: 30°.

NOTES

1. BX impregnated resistors will be furnished unless order specifies "without BX".
2. Letters in separate price columns above indicate resistance wire alloy, as follows:
   - a. "L"—manganin.
   - b. "J"—iron-free nichrome.
   - c. "N"—iron-bearing nichrome.
   - d. "E"—high resistivity nichrome.

TYPES BX183A AND BX193—±1% IN COMMON VALUES—IN STOCK

In addition to the popular standard types listed here, Shallcross Akra-Ohm Resistors are made in a complete line of standard and special designs for precise electronic equipment demanding great stability and long life even under difficult conditions of temperature and humidity.

Shallcross achievements include the development of really practical hermetically-sealed units; BX processed resistors "tropicalized" against moisture and fungus; the use of spun glass insulated wire for applications where considerable power must be dissipated; bifilar wound resistors, 1000 ohms or less, for exacting instrument use; heavy-duty surge resistors; accurate heavy-duty power resistors, and various others. Write for Shallcross resistor bulletin R3-B for complete information.

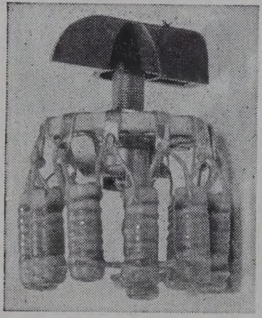
UNMOUNTED DECADE RESISTANCES



In response to a demand from engineers, manufacturers and physicists who design and construct their own electrical measuring instruments, we have made the Shallcross Unmounted Decade Resistances available. They are of the same construction as those used in the popular Shallcross Resistance Decades described above and consist of ten Shallcross Resistors mounted on a ceramic instrument switch.

SHALLCROSS AKRA-OHM PRECISION RESISTORS

for "Miniaturization" applications

UNUSUAL ACCURACY IN SMALL SPACE

These new Shallcross Akra-Ohm Wire-Wound Precision Resistors have been designed to meet the needs of modern, miniature equipment. Standard tolerance is 1%. Closer tolerances can be furnished on special order.

The units offer unusually high and accurate resistance values in small space and are light enough to be suspended by their own tinned copper leads, or may be secured with mounting screw.

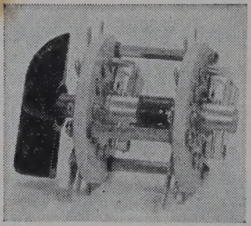
SHALLCROSS ROTARY SELECTOR SWITCHES



Like other Shallcross instrument components, these Rotary Selector Switches are designed to cover a very wide field of application in both shorting and non-shorting types, and can be modified to control a variety of circuits. Details on any type for practically any application on request. Suffixes B and S denote Brass and Silver contacts and contact arms. Write for Specification Sheet SS-6.

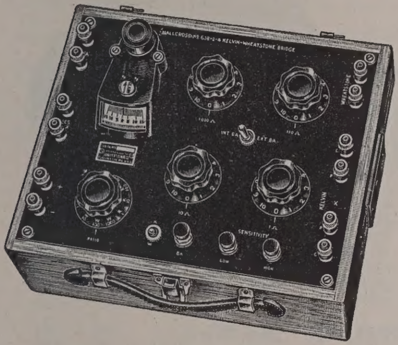
SHALLCROSS D-C BRIDGES



No. 638-R

KELVIN WHEATSTONE BRIDGE

Resistance range 0.0001 ohm to 11.11 megohms

SPECIFICATIONS

ACCURACY—0.3% between 1.0 ohm and .1111 megohms. Below and above this range—2%.

GALVANOMETER—Built-in—sensitivity 1 micro-ampere per millimeter division.

RHEOSTAT ARM—Four decades—1.0 ohm steps in Wheatstone and 1.0 micro-ohm steps in Kelvin ranges.

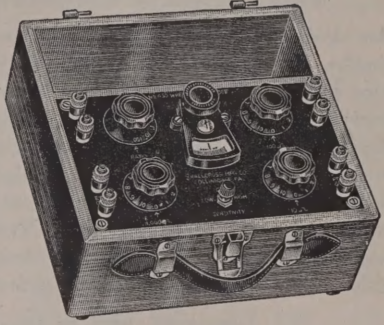
RESISTANCE BOX—Binding posts allow using rheostat as Resistance Box.

PUSH BUTTONS—Provided for battery and galvanometer circuits.

CASE—Carrying type with removable cover (not illustrated) and compartment for 4½ volt battery (not supplied) for Wheatstone range measurements.

DIMENSIONS—Length 12½″, width 10½″, height 6¾″.

WEIGHT—Approx. 9 lbs. Price $260.00.



No. 630

WHEATSTONE BRIDGE

Resistance range from 0.1 ohm to 11.1 megohms

SPECIFICATIONS

ACCURACY—1.0% between 10 ohms and 1.0 megohm—2% over 1 megohm.

COMPONENT RESISTORS—0.1% accurate except 1 ohm, which are 0.25%.

RHEOSTAT ARM—Three decades—variable in 10.0 ohm steps.

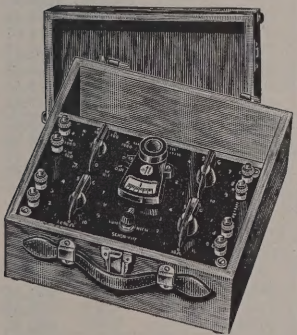
RESISTANCE BOX—Binding posts allow using rheostat as Resistance Box.

CAM SWITCHES—Provided for battery and galvanometer circuits.

CASE—Carrying type with removable cover and compartment for batteries and leads (not supplied).

DIMENSIONS—Length 10″, width 9¾″, height 6″.

WEIGHT—Approx. 6 lbs. Price $145.00.



No. 637

KELVIN WHEATSTONE BRIDGE

Resistance range 0.001 ohm to 11.1 megohms

SPECIFICATIONS—Same as No. 638-R except:

ACCURACY—1.0% between 1.0 ohm and 1.0 megohm; 2.0% above 1.0 megohm; and 3.0% below 0.1 ohm.

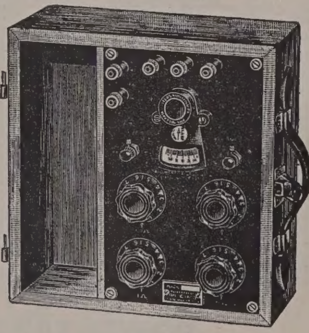
GALVANOMETER—Sensitivity 1.0 micro-ampere per millimeter division. Built-in.

RHEOSTAT ARM—Three decades—10 ohm steps in Wheatstone and 10 micro-ohm steps in Kelvin ranges.

CANNOT be used as Resistance Box.

DIMENSIONS—Length 10″, width 9¾″, height 5¼″.

WEIGHT—Approx. 7 lbs. Price $185.00.



No. 627

FAULT LOCATION BRIDGE

Resistance range 0.1 ohm to 11.11 megohms

SPECIFICATIONS

COMPONENT RESISTORS—0.1% accurate except 1.0 ohm, which are 0.25%.

GALVANOMETER—Built-in—sensitivity 1.0 micro-ampere per mm. division.

RHEOSTAT ARM—Four decades—1,111 ohms—variable in 0.1 ohm steps.

RATIO—Unity ratio makes rheostat setting indicate resistance directly. Operator then uses charts in lid to convert readings into fault distance.

CAM SWITCHES—Provided for battery and galvanometer circuits.

CASE—Carrying type with removable cover, concealed compartment for battery (not supplied).

ACCURACY—0.3% for 1 to 1,111 ohms—2% for 0.1 to 1 ohm.

DIMENSIONS—Length 10″, width 9¾″, height 5¾″.

WEIGHT—Approx. 6 lbs. Price $145.00.

OHMITE RHEOSTATS

All-Porcelain — Vitreous-Enameled

The design and construction of these sturdy, compact Ohmite Rheostats insure permanently smooth, gradual, close control. The wire is wound over a porcelain core, bonded to porcelain base, and permanently locked in place by special Ohmite Vitreous Enamel. Nothing to smoke, char, shrink, or shift. Dissipates heat rapidly. Insulated shafts and bushings. Copper graphite contacts. Ratings are for "free air" use. Time-proved through long trouble-free service in countless installations the world over. Underwriters' Laboratories Listed.

OTHER OHMITE RHEOSTATS

Ohmite Rheostats are also available in Model G, 75 Watt; Model P, 225 Watt; Model R, 500 Watt; Model T, 750 Watt; and Model U, 1,000 Watt units, in many resistance values. Special Rheostats with tapered windings, etc., can be supplied; also Special Rheostats for Model Train Control. Cages and other accessories also available.

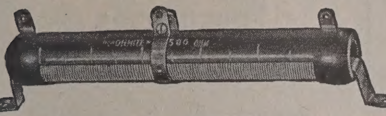
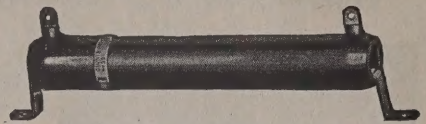
OHMITE DIVIDOHM RESISTORS



OHMITE FIXED RESISTORS



All-Porcelain

Vitreous-Enameled

You can adjust the resistance or secure odd resistance values quickly with these Dividohms; easily put on more taps where needed. Ideal voltage dividers. With one adjustable lug and with mounting brackets.

Extra-sturdy, wire-wound, all-porcelain resistors with the permanent protection of Ohmite Vitreous Enamel. Widely used for heavy duty applications to assure continuous trouble-free service. With mounting brackets.

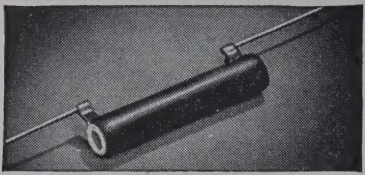
Popular OHMITE "BROWN DEVIL" RESISTORS



High quality, small size, wire-wound resistors ideal for voltage dropping, bias units, bleeders, etc. They're extra-sturdy, all-ceramic, vitreous enameled. They give time-proved protection against shock, vibration, heat and humidity. Their long record of continuous trouble-free service—their wide use in all climates of the world—prove their complete reliability and economy. All units can be conveniently mounted by means of their 1½" tinned wire leads.

The all-welded construction of the 5 watt unit makes it possible to extend the resistance range to 10,000 ohms, an unusually high value for a vitreous enameled stock unit.

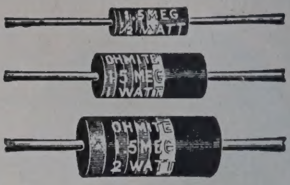
OHMITE "LITTLE DEVIL" RESISTORS

Individually Marked



Ohmite "Little Devils" are full ½ Watt, 1 Watt and 2 Watt Insulated Composition Resistors and can be used at their full wattage ratings at 70° C. (158° F.) ambient temperature. They meet requirements of specification JAN-R-11. All units are color coded. Each resistor is marked with the resistance value, wattage rating and the Ohmite trademark. "LITTLE DEVILS" are available from stock in ½, 1 and 2 watt sizes with ±5% or ±10% tolerance. The standard RMA values, 10 ohms to 22 megohms can be furnished. In the 1 watt size, ±10% tolerance values as low as 2.7 ohms are available from stock.

Stocked in RMA Values ±5% or ±10% Tolerance

(Figures in bold type are ±10% RMA values. All values except (*) available in ±5% tolerance.)

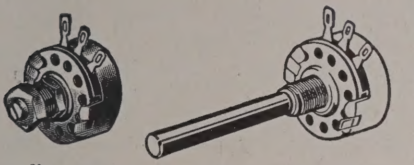
2 WATT MOLDED COMPOSITION POTENTIOMETER—TYPE AB



The Type AB Potentiometer is an exceptionally high quality unit designed especially for industrial, laboratory, radio service and other uses where reliability is particularly important. Because the resistor element is molded, the unit has an exceptionally large safety factor. The power rating of 2 watts is unusual for a unit of such small size. The unit has a very low noise level and low voltage coefficient. It will pass the Army-Navy 200 hour salt spray test, specification AN-QQ-S-91. The unit is 1-1/16″ diameter and extends 9/16″ behind the panel. The 2″ long round shaft (including the ⅜″ long mounting bushing) is available from stock on potentiometers with all three resistance tapers. The screwdriver shaft with locking-nut is available from stock on the linear taper units only. A SPST switch, to be attached to the back of the control, can be supplied extra.

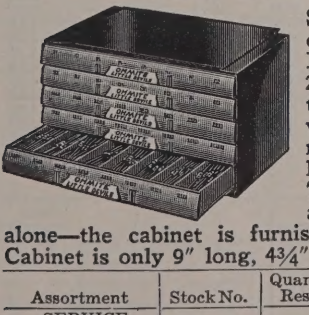
LITTLE DEVIL RESISTOR ASSORTMENTS FOR SERVICE USE



Serviceman's assortments of 125 Ohmite "Little Devil," ½-watt, 1-watt or 2-watt insulated composition resistors, in the 40 values (10 ohms to 10 megohms) most frequently used by servicemen. The assortment is offered at the price of the resistors alone—the cabinet is furnished without extra cost! Cabinet is only 9″ long, 4¾″ high, and 5¼″ deep.

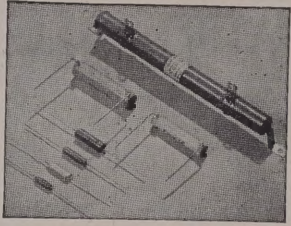
OHMITE R.F. PLATE CHOKES



This series of seven Ohmite single layer wound solenoid radio frequency plate chokes covers the entire frequency range of 3 to 520 megacycles. The four highest frequency chokes are wound on low power factor plastic cores while the other three units are wound on steatite tubes. Windings are insulated and protected by a moisture-proof coating. The single layer winding is designed to avoid adverse harmonic effects within the recommended operating range and also prevents breakdown from high r.f. potentials.

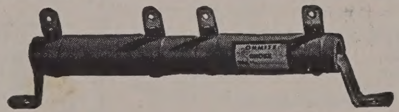
OHMITE POWER LINE CHOKES



Prevents high-frequency currents of radio transmitters, diathermy and therapeutic equipment from going out over the power lines and interfering with nearby radio receiving sets. Used as a filter in connection with two grounding condensers of 0.1 microfarad capacity each. The Z-20 Choke is also used at radio receivers to keep out interference. All chokes consist of two single-layer windings on a single ceramic core—insulated and protected by moisture-proof coating. Recommended for use in suppressing radio (not audio) frequency interference.

NEW OHM'S LAW CALCULATOR

Redesigned! This new, improved version of the famous Ohmite Ohm's Law Calculator—popular the world over with servicemen, engineers and students—now has scales for solving parallel resistance problems, AND a standard slide rule. More useful than ever! With one setting of the slide the calculator gives the answer to any Ohm's Law problem—reading directly in ohms, volts, amperes, and watts. Three of the new scales on the back provide a quick, one-setting means of solving parallel resistance problems. The slide rule scales will multiply, divide, find squares, and square roots.

LECTROHM

INCORPORATED • CHICAGO 30, ILLINOIS

VITREOUS ENAMELED RESISTORS

Adjustable Wire-Wound Types

The same high quality and construction are used for LECTROHM Adjustable Resistors as are incorporated in LECTROHM fixed units.

These resistors are used for replacing voltage dividers in radio receivers, for radio transmitter power supply, and for general experimental work.

SLIDEOHM WIRE-WOUND VITREOUS-ENAMELED ADJUSTABLE RESISTORS

Slideohm Resistors are for use in any application where it is necessary or desirable to have one or more intermediate resistance values; or in circuits that need to be changed from time to time to meet varying electrical conditions. Slideohm Resistors are built of the highest grade low temperature coefficient materials, and are coated with tough crazeless Vitreous Enamel.

Adjustable resistors combining adjustment to any resistance value within unit's range, with positive, permanent, non-fluctuating qualities of wire-wound resistor. Each Slideohm Resistor is provided with horizontal mounting brackets and one adjustable contact slider.

WATT RATINGS

Nominal Watt ratings for Slideohm Resistors apply when the entire resistor is in the circuit. For most practical purposes the watt rating for each part of the resistor is approximately proportional to the amount of the resistance that is in the circuit.

Mounting brackets are furnished with all Slideohm Resistors.

Price of resistor includes brackets and one adjustable band.

ADJUSTABLE BANDS

One screw-driver type adjustable band terminal is supplied with each "Slideohm" resistor. Order additional bands, screw-driver or knob type as illustrated by resistor type number for which band is to be used.

WIRE-WOUND VITREOUS ENAMELED FIXED RESISTORS • TYPES 931-933

Compact genuine wire-wound, vitreous-enamel. Correctly designed, highest quality materials used throughout. Note these features:

1. Crack-proof refractory tubing for the support. Adequate heat dissipation.
2. Quality resistance wire precisely spaced, tension wound.
3. Copper terminal band clamped to tubing. Wire ends wrapped and brazed around raised ear.
4. Heavy vitreous-enamel coating for permanent seal against moisture, oxidation and mechanical damage.
5. Pig-tail of stiff wire 2 in. long soldered to terminal band for positive, non-breakable connection.

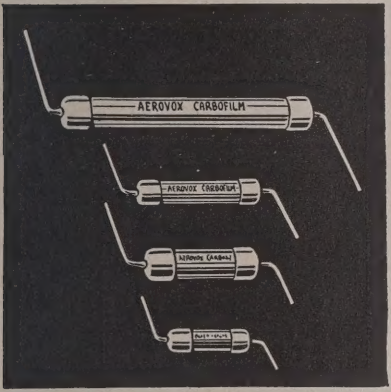
AEROVOX *Carbofilm* RESISTORS



PRECISION RESISTORS MADE WITH MATCHLESS ACCURACY

Made under licensed agreement with Western Electric, these precision resistors are the result of years of intensive research in developing components with extreme accuracy and stability. Carbofilm resistors are intended for circuits calling for the accuracy and stability of wire-wound resistors with the marked economy of carbon resistors. They serve a real need in test equipment and laboratory instruments. All in all, Carbofilm resistors meet the requirements of accuracy, stability and economy.

The Carbofilm resistors are a carbon deposit type and are available in the following standard or jobber stock sizes with the resistance value shown in the listing.

Packed and sealed in plastic tubes for your protection.

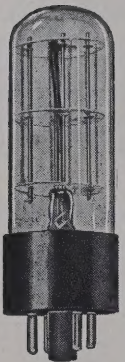
AUTOMATIC AMPERITE REGULATOR

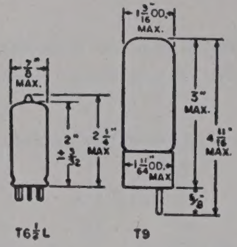
BALLAST TUBE FOR AUTOMATIC REGULATION OF CURRENT AND VOLTAGE

AUTOMATIC REGULATION



T9 BULB

AMPERITE is an automatic rheostat designed to keep the current in a circuit at a definite value, for example, 0.5 amps. ***Should the supply voltage increase, the Amperite will automatically increase in resistance enough to take up the increase in supply voltage—keeping the voltage on the load constant.***

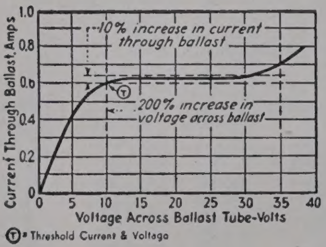


SIZES:

T-5½ L, Miniature. O.D. 11/16"; seated height, 2 3/16".

T-6½ L, Miniature. O.D. 13/16"; seated height, 2 3/16".

T-9, Octal base. O.D. 1 5/16"; seated height, 3".



CHARACTERISTIC CURVE

Characteristic curve of a typical Amperite. Approximate curve of any other Amperite can be obtained by multiplying or dividing the current or voltage scale by any number.

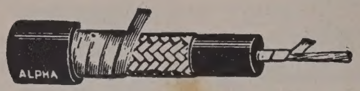
1249	20	26/34	30 mmf.	.245"	100 Ft. Spool



Construction: Single conductor, extra flexible stranded tinned copper, cotton serve, insulated with special low loss SIC rubber compound, braided tinned copper shield, cotton serve, tough black rubber jacket overall.

Alternate put-up use code:
D = 250 ft., E = 500 ft., F = 1000 ft.

SHIELDED MICROPHONE CABLE

GENERAL PURPOSE: Adaptable for all indoor and outdoor crystal, carbon and condenser microphones as well as public address systems.

Nos. 1256-7-8: Each conductor 20—10/30 stranded tinned copper, 1/64" rubber, waxed cotton braid, color coded, conductors twisted, tinned copper shield overall.

No. 1256V—Two conductors 20—10/30 stranded tinned copper, 1/64" plastic, color coded, conductors twisted, tinned copper shield overall.

Nos. 1262-3-4—Same as Nos. 1256-7-8 plus cotton braid over shield.

No. 1262V—Same as No. 1256V plus cotton braid over shield.

Alternate put-up use code:
D = 250 ft., E = 500 ft., F = 1000 ft.

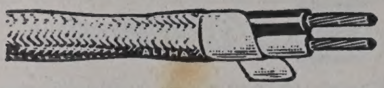
SHIELDED TWISTED PAIR CABLE

GENERAL PURPOSE: Where small diameter is required for sound recording, photo electric cell circuits, public address systems, etc.

No.	Conductors	Size	Strand	O.D.	Put-up
1261	2	24	16/36	.115"	1000 Ft. Spool

Construction: Two conductors 24-16/36 extra flexible tinned copper, 1/64" vinyl insulation, color coded, conductors twisted, very fine tinned copper shield overall.

NOTE: See Page S-13 for ALPHA Prices and Other Information.



Construction: Two conductors 18-16/30 stranded tinned copper, 1/32" "Hi-Tension" rubber, color coded, conductors twisted, paper wrap, close tinned copper shield overall.

No. 1266 same as No. 1265 except with waxed cotton braid over shield.

Alternate put-up use code: F = 1000 ft.

SHIELDED DUPLEX SPEAKER CABLE

GENERAL PURPOSE: For P.A. systems, photo-electric cell circuits, master control sound systems, etc.

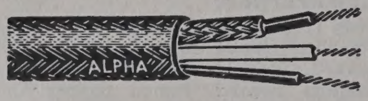
Construction: Two conductors parallel, 18-16/30 stranded tinned copper, rubber insulated, color coded, lacquered cotton braid, galvanized steel armor overall.

Alternate put-up use code: F = 1000 ft.

ARMORED DUPLEX SPEAKER CABLE

GENERAL PURPOSE: For P.A. systems, oil burner installations, automotive wiring, etc.

No.	Conductors	Size	Strand	O.D.	Put-up
1272	2	18	16/30	.132" x .182"	500 Ft. Spool



Construction: Three conductors 22-7/30 tinned copper, vinyl plastic insulation, color coded; tinned copper shield over one conductor, two conductors unshielded; cotton braid overall.

Alternate put-up use code: F = 1000 ft.

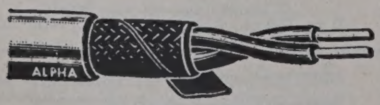
INTER-COMMUNICATION CABLE

3 CONDUCTORS

(1 SHIELDED — 2 UNSHIELDED)

GENERAL PURPOSE: This cable is ideal for general wiring from station to station where a shielded single conductor is essential to eliminate cross talk.

No.	Conductors	Size	Strand	O.D.	Put-up
1242	3	22	7/30	.155"	500 Ft. Spool



Construction: Two conductors 19 AWG solid tinned copper, 1/32" "Hi-Tension" rubber, color coded, conductors twisted, pure lead sheath overall.

LEAD SHEATHED CABLE

GENERAL PURPOSE: For P.A. systems, communications, traffic control, mines, railroads and many other uses where severe moisture conditions are encountered. For all outdoor use including underground and underwater.

No.	Conductors	Size	O.D.	Put-up
1271	2	19 Solid	.325"	1000 Ft. Reel

NOTE: See Page S-13 for ALPHA Prices and Other Information.

BRAIDED COMMUNICATION CABLE

(TWISTED PAIRS)

GENERAL PURPOSE: For interior use designed for connecting inter-communication systems, annunciators, telephones, etc.

No.	Pairs	Conductors	Size	O.D.	Put-up
1276/2	2	4	22 Solid	.185″	1,000 Ft. Reel

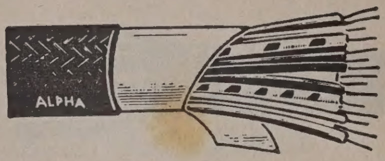
1277/25	26	52	22 Solid	.445″	1,000 Ft. Reel



Construction: Each conductor 22 AWG solid tinned copper wire, two cotton reverse serves paraffined, color coded, conductors twisted into pairs, then covered with an impregnated double paper wrap, and overall a cotton braid saturated with a moisture-proof, flame retarding, rodent-proof compound.

LEAD-COVERED COMMUNICATION CABLE

(TWISTED PAIRS)

GENERAL PURPOSE: For use indoors, outdoors, underground and in pipes for connecting inter-communication systems, annunciators, telephones, etc.

No.	Pairs	Conductors	Size	O.D.	Put-up
1289	6	12	22 Solid	.375″	1,000 Ft. Reel

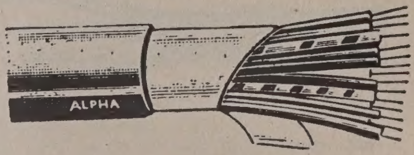
1295	26	52	22 Solid	.560″	1,000 Ft. Reel



Construction: Similar to Braided Communication Cable above, but with lead antimony sheath instead of cotton braid over the twisted pairs.

INTER-COMMUNICATION CABLE

(BRAIDED)

GENERAL PURPOSE: Designed for interior use for connecting inter-communication systems, annunciators, thermostat controls of oil burners, air conditioners, etc.

No.	Conductors	Size	O.D.	Put-up
1274	2	18 Solid	.150″	500 Ft. Spool

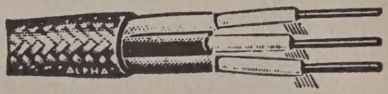
1275/5	5	18 Solid	.200″	500 Ft. Spool
1275/6	6	18 Solid	.220″	500 Ft. Spool

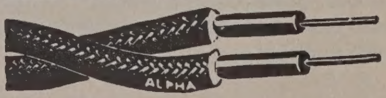


Construction: Each conductor 18 AWG solid bare copper wire, thermoplastic insulation, color coded, conductors twisted, waxed cotton braid overall.

OUTDOOR INTER-COMMUNICATION WIRE

GENERAL PURPOSE: For outdoor and indoor use or in any damp location, for connecting communication systems, telephones, etc.

No.	Conductors	Size	O.D.	Put-up
1279	2	19 Solid	.200″	500 Ft. Coil
1280	3	19 Solid	.300″	500 Ft. Coil



Construction: Each conductor 19 AWG solid tinned copper, 1/64″ telephone compound rubber, heavy cotton braid with specially treated compound to make it weather-proof for resistance against rain, snow, hail and cold.

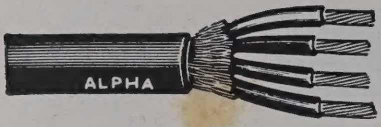
INDOOR INTER-COMMUNICATION WIRE

GENERAL PURPOSE: For connecting sound and communication systems, telephones, etc.

No.	Conductors	Size	O.D.	Put-up
1269	2	22 Solid	.125″	500 Ft Spool

Construction: Two conductors twisted, each 22 AWG solid copper, insulated, color coded.

NOTE: See Page S-13 for ALPHA Prices and Other Information.



Construction: Each conductor 20-26/34 extra flexible stranded tinned copper, cotton wrap, 1/32" "Hi-Tension" rubber, color coded, conductors twisted, cushioned with cotton fillers, cotton wrap, tough black rubber jacket overall.

Alternate put-up use code:
D = 250 ft., E = 500 ft., F = 1000 ft.

MULTI-CONDUCTOR FLEXIBLE CABLE

(RUBBER JACKETED)

GENERAL PURPOSE: For indoor and outdoor speakers, permanent or portable P.A. systems, sound recording and auto radios.

No.	Conductors	Size	Strand	Capacity Per Ft. Between Conductors	O.D.	Put-up
1244	2	20	26/34	22 mmf.	.250"	100 Ft. Spool

Construction: Each conductor 20-10/30 stranded tinned copper, 1/64" thermoplastic insulation, color coded, conductors twisted, brown cotton braid overall.

Alternate put-up use code:
D = 250 ft., E = 500 ft., F = 1000 ft.

MULTI-CONDUCTOR FLEXIBLE CABLE

(COTTON BRAID)

GENERAL PURPOSE: For connecting speakers, analyzers, remote control units, P.A. systems or wherever a multiple circuit hook-up is required.

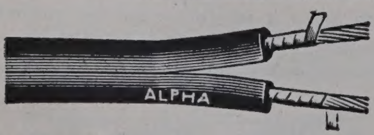
Available with Additional Conductors. Also other sizes.



Construction: Two conductors parallel, 18-41/34 extra flexible bare copper, color coded, cotton serve, 40% tough rubber jacket overall. Slit in jacket to permit "E-Z" separation.

E-Z STRIP LAMP CORD—TYPE POSJ

(UNDERWRITERS APPROVED)

GENERAL PURPOSE: For line cord on radios, lamps, electric clocks, food mixers and other small devices.

No.	Conductors	Size	Strand	O.D.	Put-up

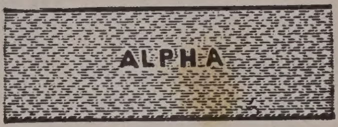
1234	36 AWG	3/4″	50 Ft. Spool
1235	36 AWG	1″	50 Ft. Spool



Construction: Composed of very fine soft annealed tinned copper wires braided and rolled flat.

Alternate put-up use code:
Q = 100 ft., D = 250 ft., E = 500 ft., F = 1000 ft.

SHIELDED PHONO AND GRID WIRE

GENERAL PURPOSE: Extreme flexibility and limpness make this an ideal wire for phonograph pick-up arm cable and grid wire.

No.	Conductors	Size	Strand	Insulation	O.D.	Put-up
1200	1	24	16/36	.010″	.080″	1000 Ft. Spool

1202	2	24	16/36	.010″	.115″	1000 Ft. Spool

Construction:
No. 1200: Single conductor 24-16/36 extra flexible stranded tinned copper, vinyl plastic insulation, fine close tinned copper shield overall.
No. 1201 same as No. 1200 plus cotton braid over shield.
No. 1202 same as No. 1200 except two conductors with shield overall.

SHIELDED LOW LOSS CABLE

GENERAL PURPOSE: For auto radios, lead-ins, short wave receivers and for grid leads in the input stages of P.A. amplifiers.

No.	Size	Strand	O.D.	Put-up
1241	20	10/30	.225″	100 Ft. Spool

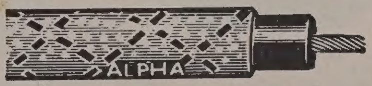
Construction: Single conductor 20-10/30 stranded tinned copper, heavy low loss insulation, white silk braid, tinned copper shield overall.

Alternate put-up use code:
D = 250 ft., E = 500 ft., F = 1000 ft.

7 MM LACQUERED CABLE

GENERAL PURPOSE: For high voltage leads in television receivers, cathode-ray tubes, oscilloscopes, etc.

No.	Size	Strand	Insulation	O.D.	Put-up
1981	16	19/29	3/32	.275″	100 Ft. Spool



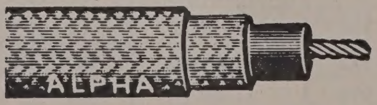
Construction: Single conductor 16-19/29 stranded tinned copper, rubber insulated, cotton braid highly lacquered.

Alternate put-up use code:
D = 250 ft., E = 500 ft., F = 1000 ft.

7 MM SHIELDED IGNITION CABLE

GENERAL PURPOSE: For automotive and aircraft ignition systems requiring grounding to overcome interference.

No.	Size	Strand	Insulation	O.D.	Put-up
1193	16	19/29	3/32	.300″	100 Ft. Spool



Construction: Single conductor 16-19/29 stranded tinned copper, rubber insulated, cotton braid highly lacquered, braided tinned copper shield overall.

Alternate put-up use code:
D = 250 ft., E = 500 ft., F = 1000 ft.

LACQUERED PRIMARY WIRE

GENERAL PURPOSE: For automobile head, tail, side, dashboard lamps, horn, spotlight, instrument leads and general high voltage and primary voltage applications.

No.	Size	Strand	Insulation	O.D.	Put-up
1989	18	16/30	1/64″	.110″	100 Ft. Spool

LACQUERED HOOK-UP AND LEAD-IN WIRE

(HIGH GLOSS LACQUERED BRAID)

GENERAL PURPOSE: For point to point soldering connections on transformers, amplifiers, panel hook-up, etc., where a low loss dielectric is required. It is not a pushback wire but will strip easily.

Construction: Single conductor stranded tinned copper, free stripping insulation, single braid highly lacquered.

STANDARD COLORS:

Sizes 20-18—Black, Red, Green, Yellow Blue, Brown, White.

Sizes 16-14-12-10—Black, Red.

Available in additional colors and tracer combinations.

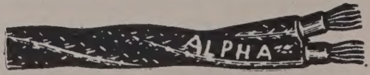
Construction: Single conductor 14-104/34 copper, paper serve, 3/64" ASTM performance grade rubber, double cotton braid, .040" oil resistant neoprene rubber jacket.

TWISTED PAIR TRANSMISSION LINE

(WEATHERPROOF BRAID)

GENERAL PURPOSE: For inter-com. hook-up. Also suitable for low loss coupling between antenna and receiver as doublet style twisted lead-in.

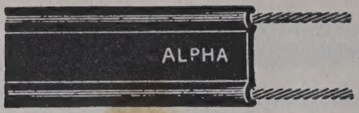
No.	Conductors	Size	Strand	O.D.	Put-up
1146	2	22	7/30	.175"	500 Ft. Spool
1135	2	18	16/30	.190"	500 Ft. Spool



Construction: Two conductors stranded tinned copper, 1/32" "Hi-Tension" rubber, color coded, conductors twisted, cotton braid overall, saturated weatherproof finish.

NOTE: See Page S-13 for ALPHA Prices and Other Information.

ALPHA WIRE CORPORATION



TELEVISION AND FM TWIN-LEAD CABLE

GENERAL PURPOSE: For use especially in television and FM as the lead-in from the antenna to the receiver.

No.	Impedance (Ohms)	Capacity Per Ft.	O.D.	Put-up
1150	300	4.5 mmf.	.070" x .395"	1000 Ft. Spool

FLEXIBLE VARNISHED TUBING AND SLEEVING

ALPHA
SPAGHETTI

RADIO VARNISHED TUBING — (Spaghetti). A sleeving with a heavy coat of varnish, in high gloss vivid colors. Average dielectric strength: 7,000 volts.

SATURATED SLEEVING — A fibre yarn sleeving saturated with high grade insulating varnish. Cuts clean and has a smooth interior wall. Average dielectric strength: 2,000 volts.

MAGNETO VARNISHED TUBING—The production of this type of tubing is under rigid control so as to insure a maximum in quality. It is thoroughly impregnated with a varnish of maximum insulating value. It is resistant to heat, oil, gas and acids. Colors are bright and vivid. Average dielectric strength: 7,000 volts.

3 to 13—plus or minus .004"
14 to 20—plus or minus .002"

Standard Color: Black. Other colors to order.

Sizes follow the B & S System of gauging wires. For instance, a No. 10 tubing will fit over a No. 10 bare wire or any wire with an insulation of which the O.D. is equivalent to No. 10 B & S gauge. If in doubt, it is best to submit a sample of the wire or product to be covered.

LENGTHS—STANDARD 36" **LONGER LENGTHS AVAILABLE**

SPAGHETTI TUBING

A superior varnished tubing for radio work. It will retain its dielectric and flexibility indefinitely. Takes up to No. 14 wire.

Colors: Black, Red, Yellow, Green and Brown

No. 2091 — 36" Lengths

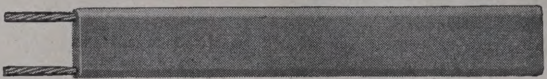
Intelin* TV Lead-in Cables by Federal

Transmission Lines for Every Television Application by America's Leading Manufacturer of Solid Dielectric HF Cables

FTR TV-1182 "Silver" Heavy-Duty TV Line—300 ohms



Insulated with Federal "Silver" polyethylene—the revolutionary development that provides greater resistance to weather, heat and sunlight. Unchanging electrical and physical characteristics assure long, trouble-free service. Installations are more attractive—silver insulation blends with any color scheme in home decoration.

BIRNBACH THERMOPLASTIC INSULATED HOOK-UP WIRE

105°C. — 600-VOLT RATING UL APPROVED

Especially designed for the chassis, sub chassis wiring of radio and television receivers and transmitters inside or outside the chassis. UL approved for 105°C. (221°F.) operating temperature. Has high electrical characteristics. All wires are annealed tinned copper.

TYPE WL — EXTRUDED NYLON JACKET HOOK-UP WIRE (Fungus Proof)

SPEC. JAN-C-76

Extensively used in electronic devices, aircraft instruments, lighting and power transmitters, radar, etc. Constructed of one conductor, copper tinned high heat vinyl insulation with an extruded Nylon jacket overall. This wire will not fray, crack or rot; it is non-combustible with extreme high chemical and abrasion resistance; extreme low moisture absorption and low dielectric leakage; extremely flexible over a wide temperature range it remains soft and pliable at reduced temperatures; it will absorb hard usage, frequent bending and twisting.

HIGH VOLTAGE & CATHODE-RAY TUBE LEAD CABLE

This High Voltage and Cathode Ray Tube Lead Wire is approved for 10,000, 20,000, and 40,000 volt applications. It is made of RULAN (flame retarding type Polyethylene) which is high heat resistant and moisture resistant. Approved by A.S.T.M. It has a dielectric constant of 2.7 and a power factor of .002.

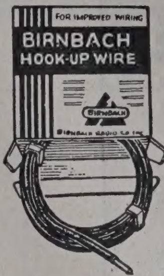
BIRNBACH RADEX SLIPBACK HOOKUP WIRE



It has a covering of .010 rubber over a cotton wrap and is then covered with a bright color cotton braid and dipped into paraffin. This construction will not cause the cotton insulation to fray or bunch up when pushed back. It has a high dielectric strength and will withstand all climatic changes without breakdown.

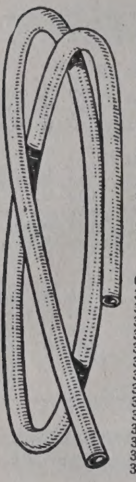
BIRNBACH BIRACO TUBING

(Extruded Vinyl)



Synthetic plastic tubing especially designed for electronic and electrical insulation work. Extremely flexible and high resistance to abrasion. Has high dielectric strength, average 10,000 volts and high tensile strength. Will not support combustion, soften up to 257°F. or crack at —75°F. Its dielectric strength: 1100 volts per mil at room temperature when dry and 1000 volts per mil when wet. Impervious to water, oil, alkalies, alcohol, solvents, etc. Meets all ASTM specs.

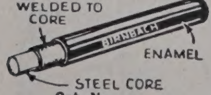
BIRNBACH COPPERWELD ENAMEL ANTENNA WIRE



Steel core covered with copper and heavily enameled. Will not elongate because of its high tensile strength . . . which is several times that of enameled copper wire. It has low R.F. resistance and is ideal for transmitting doublet and directional antenna systems as it will maintain the frequency characteristics of the antenna because of its stretchless qualities.

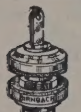
BIRNBACH STEATITE BUTTON



This specially designed steatite button is intended for use to simplify wiring and to be used as a binding post or a binding post insulator, or as a standoff insulator. Attention is called to the uniqueness of the design which prevents either section of the insulator from turning in respect to the special screw. The specially designed screw locks both sections.

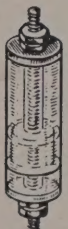
"LUCITE" FEEDTHRU INSULATORS



These feedthru insulators are ideal for bringing high frequency leads thru a panel. They are made of genuine DuPont Lucite. Because of its low loss at high frequency, it is well adapted to insulated elements of high frequency circuits. Smooth Polyethylene insulation resists water, alkalies, oil, acids and abrasions—superior in resistance to sunlight and moisture.

Cat. No.		St. Pkge.
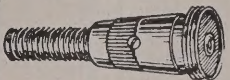
7028—	50 ft. coils	25
7029—	100 ft. coils	12
7030—	1000 ft. spool	8

No. 231-MC Microphone Connector



Made of milled brass and chrome plated. Wire secured by threading thru coiled spring and bending shield back on spring and soldering. Center conductor of cable is threaded thru eyelet of bakelite insulator and soldered. Set screw then tightened completing connection.

Cat. No.	Std. Pkg.
231-MC—Microphone Connector	100

No. 232-FC Microphone Connector

Milled from brass, chromium plated. Fits all standard male fittings having ⅝-27 thread.

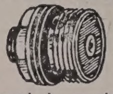
Cat. No.	Std. Pkg.
232-FC—Female Connector	100

BIRNBACH TELEVISION LOOM

⅜" Non-Metallic Loom used for the protection of Twin Lead and Coax Cable on television installations.

Cat. No.	Spool
1013	25 ft.
1014	50 ft.
1015	100 ft.

No. 233-CC CHASSIS CONNECTOR

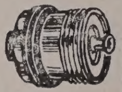


Milled of solid brass. Mounts in .385" dia. hole to ground shell directly to chassis. Mounts in ½" hole when insulation from panel is required. Supplied with shoulder and flat fibre and metal washers and hex lock nut.

Cat. No.	Std. Pkg.
233-CC—Chassis Connector	100

No. 234-CLC CHASSIS CONNECTOR

CLOSED CIRCUIT



Circuit is closed before cable circuit breaks. Prevents open grid circuit howls. Milled of solid brass, complete with shoulder and flat fibre and metal washers and lock nut.

Cat. No.	Std. Pkg.
234-CLC—Closed Circuit Jack	100

No. 235 PHONE PLUG ADAPTER

⅝-27 thread; screws into coupling ring of No. 232-FC Connector permitting cable to be plugged into standard phone jack. Made of brass and nickel-plated.

Cat. No.	Std. Pkg.
235-PC	50

Rome Hi-Temp . . . . A ROME CABLE PRODUCT

RUBBER INSULATED HOOK-UP WIRE

Underwriters' approved and labeled* for 75°C.—300 volts

The result of extensive laboratory development and proved by a decade of service—Rome Hi-Temp is offered for radio and electronic circuits where resistance to moisture and heat is required.

SPECIFICATIONS

Conductors: Annealed tinned, solid or stranded copper conforming to A.S.T.M. Specification B 33 and/or Underwriters' Standards.

In order to provide maximum flexibility and prevent unraveling of the strands a short lay stranding is used as follows:

No. 22 Awg. .33 inch max.
No. 20 Awg. .50 inch. max.

Insulation: Rome Hi-Temp—a high quality, free-stripping heat-resistant rubber insulation approved by Undedwriters' Laboratories.

Typical Test Results

Breakdown Voltage (1/32" Hi-Temp)....................10500 volts
Insulation Resistance....................Over 10000 megohms feet

*Only factory length reels are furnished with U/L's labels.

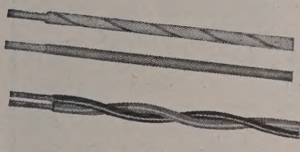
Rome Synthinol . . . . A ROME CABLE PRODUCT

THERMOPLASTIC INSULATED HOOK-UP WIRE



U/L Voltage Rating—300 Volts Max.
Single and Two-Conductor Twisted Cable: Color Coded

Rome Synthinol is a polyvinyl chloride type of thermoplastic insulation impervious to oils, acids, alkalies, moisture and flame, and possessing unusually high dielectric strength. Colors are of gem-like permanency.

Approved by Underwriters' Laboratories where exposed to temperatures not exceeding 80° Centigrade or where exposed to oil at temperatures not exceeding 60° Centigrade with ratings at 300 and 600 volts as indicated below. The Underwriters' approval seal appears on every factory length reel of Rome Synthinol.

Rome Synthinol is specially designed for the chassis and sub-chassis wiring of radio and television receivers and transmitters as well as all other types of electronic equipment. It has physical and electrical characteristics of unusual permanency.

SPECIFICATIONS

Conductors: Annealed tinned solid or stranded copper conforming to A.S.T.M. Specification B 33 and/or Underwriters' Standards.

In order to provide maximum flexibility and prevent unraveling of the strands, a short lay stranding is used as follows:

No. 22 Awg. .33 inch max. No. 20 Awg. .50 inch max.

Insulation: Rome Synthinol—Approved by and conforming to Underwriters' requirements and the performance specifications of A.S.T.M. D 734. Available in solid colors or with a surface applied contrasting colored spiral stripe.

Typical Test Results

Breakdown Voltage (1/64" Synthinol)....................over 10000 volts
Breakdown Voltage (1/32" Synthinol)....................over 18000 volts
Insulation Resistance (1/32" Synthinol)....................over 5000 megohms feet

FORMVAR WIRE—No. 2000

Covered with the new, tough, abrasion-resisting film. Takes up less space. Has these imporant qualities: No danger from stretching and bending during assembly. Tough at higher temperature. Resists abrasion better. Stable under heat aging. Does not fail after 2 hours at 105° C. Completely insoluble to petroleum solvents. Adequate acid and alkali resistance. Constant dialectric properties. Infinite resistance to water and moisture.

Use Single Formvar for low voltage coils, Heavy Formvar to replace Enamel Paper, Enamel Cotton, Enamel Silk, Double Cotton and Double Silk.

ON PROTECTA-SLEEVE SPOOLS.

COMPANIES

Popular, profitable specialty wire packaged for easy selling in radio - electrical, department, specialty and hardware stores.

Wide variety of sizes and insulations.

Keeps stock in perfect order, always saleable.

For all wire pages 16, 17, 18.

Supplied on Spool as Shown and in Heavier Weights.

Here is a handy and convenient way to stock small quantities of wire. It prevents wire from matting or tangling. The sleeve is accurately made and can be readily slipped out of the way when any length of wire is desired.

RESISTANCE LINE CORDS for AC-DC Radio Sets

The cords have a wide market for replacement on AC-DC radios with worn out cords; also on those formerly having hot resistance. Consists of a 6 foot cord with red and black rubber covered line cord wires and an asbestos covered resistance having separate terminal braid. Consolidated cords have an exclusive tinned copper terminal on the resistance cord that can be soldered. Colored cotton tracer designates ohmage.

VOLTAGE DATA

The table and example below indicate tube voltages and how to determine proper cord. Check the voltages of aech tube in the voltage table. Add all voltages together, allowing 10% variation, plus or minus.

TUBE VOLTAGES

6.3 volt tubes: 36, 37, 38, 39, 77, 78, 6B7, KR1, 6D6, 6C6, 6A7, 6F7.

12 volt tubes: 12Z3, 12A5.

25 volt tubes: 25Z5, 43.

EXAMPLE:
Radio Contains

1 77 tube—voltage	6.3
1 78 tube—voltage	6.3
1 43 tube—voltage	25.
1 25Z5 tube—voltage	25.
Total voltage	62.6

Radio uses 160 ohm cord.

VOLTAGE REDUCER CORD SETS

No. 2451

The Consolidated Voltage Reducer Cord Set can be used anywhere that it is necessary to reduce line voltage from 220 volts to 110 volts for radios, electric clocks, household appliances, electric dry shavers, etc. It has a special built-in resistor which reduces 220 volts AC or DC to 110 volts without any additional devices. It comes as a 6 foot cord with dark brown glazed cotton covering. Packed in attractive two-color box.

COPPERWELD GUY STRAND

Ideal for guying radio and television antenna masts and towers. It provides greater safety, permanent high strength and rust proof construction for the life of the antenna. Furnished in three sizes, 3 No. 18 (breaking strength 435 lbs.), 3 No. 14 (breaking strength 1000 lbs.) and 3 No. 12 (breaking strength 2236 lbs.). Lengths of 100′, 250′, 500′ and 1000′ are available.

COPPERWELD ANTENNA WIRE

Preferred for many years by professionals and amateurs. Because of its high strength, it maintains a fixed length. Furnished in 3 sizes, No. 12 Awg, No. 14 Awg and No. 18 Awg, in coil lengths of 100, 250, 1000 and 3000 feet.

COPPERWELD GROUNDING WIRE

Used to connect antenna mast to ground rod. Annealed for easy handling. Available in two sizes, No. 8 Awg and No. 10 Awg. Coils are furnished in various lengths ranging from 50 to 500 ft.

Copperweld is also used for television twin-lead wire, coaxial cable, resistor and condenser pigtails, radio tube parts and various allied components manufactured and sold by other companies.

PACKAGED WIRING SYSTEMS

APPROVED BY
UNDERWRITERS
LABORATORIES, INC.

For more convenient and efficient use of portable power tools . . .

The Pierceway Packaged Wiring System shown here assembled is the 4-foot, 6-outlet system with back-feed section in center.

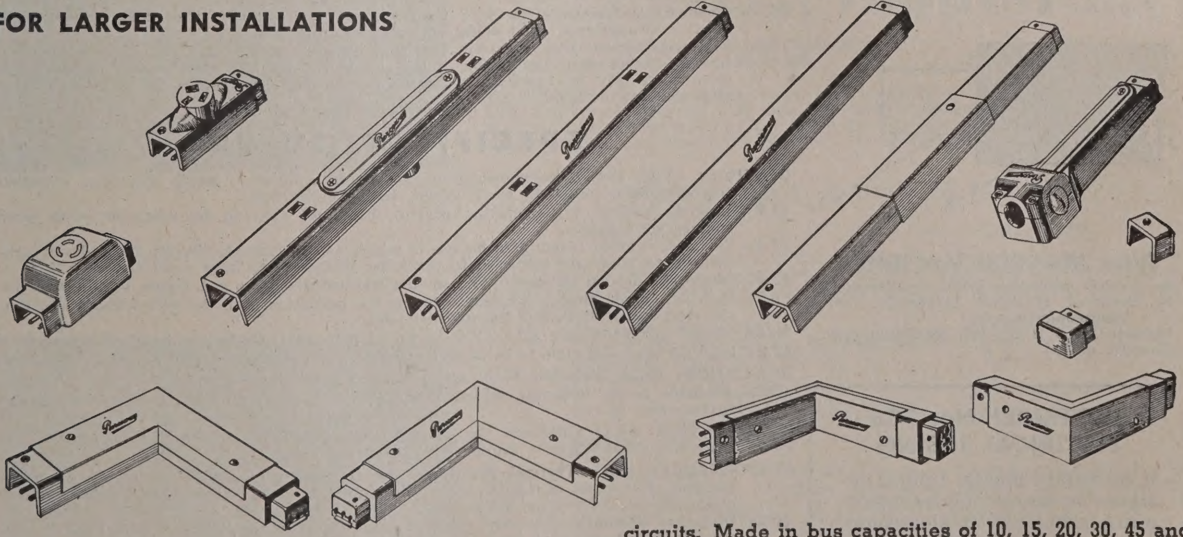
Here is the quick, easy, economical way to get all the outlets you need for efficient use of portable power tools and appliances. With 2 outlets in each section of Pierceway plastic duct, you get an outlet approximately every 8 inches.

Pierceway Packaged Wiring Systems are complete and ready to install, with copper conductors built in as an integral part of each section. These systems are easy to assemble and install—all you need is a screwdriver.

Pierceway Packaged Wiring Systems are available in both 2-wire and 3-wire systems, with a choice of end-feed or back-feed connection. Service is brought into feed section by non-metallic cable through any standard angle or straight ½-inch coupler.

Pierceway systems are packaged in 3 lengths: 4-foot system with 6 outlets; 6-foot, 8-inch system with 10 outlets; 9-foot, 4-inch system with 14 outlets.

FOR LARGER INSTALLATIONS



With the parts shown here, Pierceway systems can be assembled into many types and any size of electrical circuit. They provide an exceptionally flexible installation—if necessary, a Pierceway system can easily and quickly be taken apart and reassembled to meet any change in electrical distribution requirements. All parts are 100% salvable.

Pierceway systems can be provided for voltages of 125 and 250; for all types of 2-wire and 3-wire circuits; for single-phase or 3-phase systems, and for A.C. and D.C. circuits. Made in bus capacities of 10, 15, 20, 30, 45 and 60 amperes. Available with outlets for 2-wire or 3-wire cord caps; with outlet capacities of 10, 15 and 20 amperes; with standard 2-wire or 3-wire polarized receptacles; with Pierceway Twist-Lock or Twist-Tite receptacles, and with adequate grounding facilities.

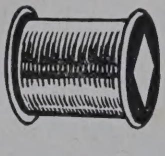
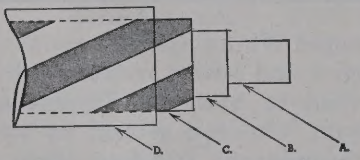
NONSTRIP*

125°C MICROWALL INSULATED WIRE

Rex "Nonstrip" is microwall insulated, multi-color coded, small gauge, copper wires, utilized in both military and commercial services for aircraft, radio, instrument, telephone and miniature component wiring. Rex "Nonstrip" has the distinct advantage of permitting soldering directly without stripping the insulation and without affecting adversely the electrical properties of the soldered joint. Nonstrip is available in two types: JR for use at 200 VAC and FJR at 1000 VAC. Manufactured on equipment of exclusive design and built solely for the production of microwall insulated conductors, "Nonstrip" is produced under carefully controlled conditions yielding a consistently superior product that is unique in the insulated wire field.



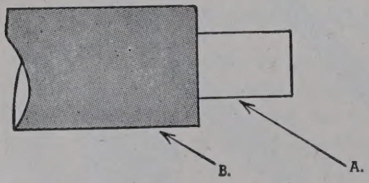
NONSTRIP CONSTRUCTION DETAILS



Type FJR—1000 Vac Rated

A. Copper conductor (solid or stranded).
B. Extruded synthetic polyamide type thermoplastic insulation.
C. Serve of thermoplastic type marker threads (over 300 different color codes available).
D. Extruded synthetic polyamide type thermoplastic jacket.

Diameter of D is 20 mils maximum over diameter of A.



Type JR—200 Vac Rated

A. Copper conductor (solid or stranded).
B. Extruded synthetic polyamide type thermoplastic resin.

Diameter of B is 10 mils maximum over diameter of A.

REXTRUDE* No. 105 ELECTRICAL TUBING

A polyvinyl plastic tubing designed to answer high temperature problems in electronic, electrical and communication fields. Meets Underwriters' Laboratories specifications for 105°C rating. Also listed under the Re-examination Service of Underwriters' Laboratories, Inc.

ASK YOUR JOBBER TO GET YOU TEST SAMPLES

SPECIFICATION FJR

GENERAL: (1.1) Design recommendation for single conductor, small diameter, multi-color coded, extruded synthetic resin insulated, small gauge, light weight wire.
(1.2) Material quality, manufacturing control, handling, etc., to be consistent with good engineering practice.
(1.3) Improved abrasion resistance with smaller finished diameters and higher tensile strength.
(1.4) May be soldered directly without stripping the insulation from the wire without affecting the electrical resistance of the soldered joint.
(1.5) Designed to withstand action of solvents, mild acids, oils, alkalies, etc.
(1.6) This specification covers wire to be used in telephone, instrument, aircraft and radio apparatus wherein they are subjected to operating temperatures from —50°C to +125°C.

SIZES: (2.1) Conductors are #18 AWG Cu Sn to #32 AWG Cu Sn, — Solid or Stranded.
(2.2) Finished wire diameters to be 20 mils maximum over the bare copper conductor diameter.

INSULATION: (3.1) Core dielectric to be an extruded thermoplastic resin
(3.2) Coding markers may include solid colors or any combination of colors may be specified.
(3.3) Jacket to be extruded transparent thermoplastic film.

CONSTRUCTION: (4.1) Conductor per ASTM Specification B-33 and as specified in Section 2.1.
(4.2) Dielectric "NONSTRIP"* synthetic thermoplastic resin.
(4.3) Markers for the desired color combination shall be spiralled and sealed within the extruded walls providing a minimum of 90% coverage.
(4.4) Jacket "NONSTRIP"* synthetic thermoplastic resin.

PERFORMANCE: (5.1) **Thermal Stability**—The finished wire shall be capable of withstanding 120 hours at 125°C, in an air circulated oven, without serious deterioration of the dielectric's physical properties.
(5.2) **Dielectric Strength**—After 5.1 the wire shall be capable of withstanding 2,000 VAC for 30 seconds after one (1) hour immersion in tap water at room temperature.
(5.3) **Conductor migration**—A wire specimen shall pass 5.2 after being draped over mandrel 5 times wire diameter, with a one-half lb. weight attached to the bared conductor and held in an air circulated oven at 125°C for 72 hours.
(5.4) **Insulation Resistance**—After 24 hours at 90% RH at 30°C, a 50 ft. length of twisted pairs shall not have less than 300 megohms after one (1) minute electrification at 20°C with an applied potential of 500 Vdc. An additional dielectric test as in 5.2 shall be applied without failure.
(5.5) **Chemical Resistance**—This wire shall perform satisfactorily after long exposures to reactive atmospheres, mild acids, solvents, hot oils, etc.
(5.6) **Flammability**—A wire specimen, horizontally suspended, shall not burn more than six (6) inches upon application of the standard flame test. For smaller sizes, two or more wires may be twisted together to provide sufficient copper for heat dissipation after removal of flame.

SPECIFICATION JR

(1.4) Improved abrasion resistance with smaller finished diameters and higher tensile strength.
(1.5) May be soldered directly without stripping the insulation from the wire without affecting the electrical resistance of the soldered joint.

SIZES: (2.1) Conductors are #18 AWG Cu Sn to #32 AWG Cu Sn, — Solid or Stranded.
(2.2) Finished wire diameters to be 10 mils maximum over the bare copper conductor diameter.

INSULATION: (3.1) Dielectric to be an extruded thermoplastic resin.
(3.2) Available in the following colors: Black, White, Clear, Red, Blue, Orange, Yellow and Green.

CONSTRUCTION: (4.1) Conductor per ASTM Specification B-33 and specified in Section 2.1.
(4.2) Dielectric "NONSTRIP"* synthetic thermoplastic resin.

PERFORMANCE: (5.1) **Thermal Stability**—The finished wire shall be capable of withstanding 120 hours at 125°C, in an air circulated oven, without serious deterioration of the dielectric's physical properties.
(5.2) **Dielectric Strength**—The wire shall be capable of withstanding 1,400 VAC for 30 seconds, in tap water at room temperature after one (1) hour at 15.5°C.
(5.3) **Conductor Migration**—A wire specimen shall pass 5.2 at a reduced potential of 700VAC after being draped over mendrel 5 times wire diameter, with a weight attached to the bared conductor and held in an air circulated oven at 125°C for 72 hours.
(5.4) **Insulation Resistance**—After 1 hour at 90% RH at 15.5°C, a 50 ft. length of twisted pairs shall not have less than 20 megohms after one (1) minute electrification at 20°C with an applied potential of 500 Vdc.
(5.5) **Chemical Resistance**—This wire shall perform satisfactorily in most oil, gasoline, reactive atmospheres, mild acids and solvents.
(5.6) **Flammability**—A wire specimen, horizontally suspended, shall not burn more than six (6) inches upon application of the standard flame test.

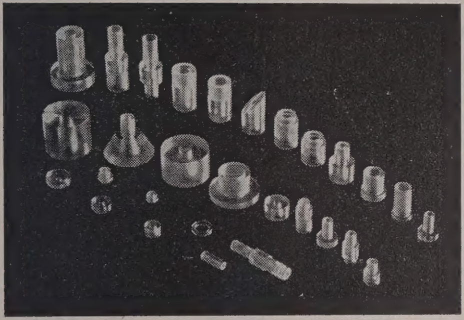
REXOLITE DIVISION — HAYWARD ROAD, ACTON, MASS.

REXOLITE 1422 U.H.F. INSULATION

COMBINES EVERY DESIREABLE PHYSICAL, CHEMICAL AND ELECTRICAL PROPERTY IN ONE INSULATING MATERIAL FOR UHF

- MEETS JAN-P-77 AND MIL-P-77A SPECIFICATIONS.
- SPECIFICALLY DESIGNED TO MEET THE GROWING NEED FOR A UHF INSULATING MATERIAL THAT IS LOW IN COST.
- WITHSTANDS HIGH TEMPERATURE DUE TO ITS THERMOSETTING NATURE.
- HAS OUTSTANDING ELECTRICAL PROPERTIES.
- HAS LOW SPECIFIC GRAVITY—IS STRONG AND RIGID WITH UNUSUALLY HIGH COMPRESSIVE AND TENSILE STRENGTHS.
- HAS EXCELLENT IMPACT STRENGTH AND HARDNESS, ALLOWING ITS USE UNDER HIGHLY ABUSIVE CONDITIONS.
- ITS DIMENSIONAL STABILITY AND UNUSUAL CHEMICAL INERTNESS ALLOW ITS USE WHERE OTHER MATERIALS FAIL.
- READILY MACHINABLE TO EXTREMELY CLOSE TOLERANCES.
- AVAILABLE AS CENTERLESS GROUND RODS IN ANY DIAMETER UP TO 1″. ALSO AVAILABLE IN LARGER DIAMETER RODS AND SHEETS.

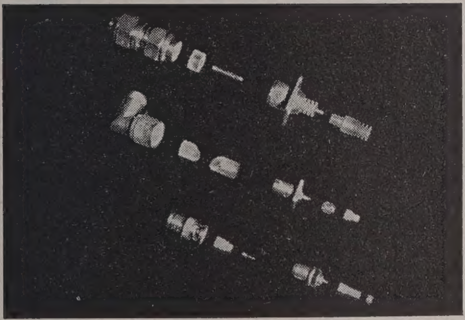


HEAT RESISTANCE

Heat Distortion (ASTM-D648-41T)	105-113°C.

Rexolite #1422 has been specifically formulated to resist high temperature. Having a heat distortion temperature a full 30°C above Polystyrene, it will withstand very high temperatures for short times, and permits the use of high-frequency induction heating for connector assembling. Under load-free conditions Rexolite #1422 maintains its original shape up to temperatures of 200°C (392°F). Even in this range it does not flow but merely becomes flexible, and upon cooling it regains its former rigidity without any dimensional changes. By loading at these high temperatures, Rexolite #1422 will distort and maintain this change if cooled while still under the distorting force. If the load is removed and the part is heated again to its softening point, the distortion vanishes and the piece regains its original form. Rexolite #1422 does not exhibit cold flow.

High frequency insulators and connector beads made from Rexolite #1422 will thus maintain their shape under light load up to 200°C (392°F) and when fully loaded they surpass the highest operating temperatures recommended for RG type coaxial cables.



ELECTRICAL PROPERTIES

Dielectric Constant—at 3000 MC	2.4 - 2.5
Power Factor—at 3000 MC	0.0006 - .0009

The low dielectric constant and power factor exhibited by Rexolite #1422 at ultra-high frequencies—plus its high heat resistance—recommend the use of Rexolite #1422 for UG connector beads, UHF antenna and oscillator coils, stand-off insulators, feeder spreaders, supports for air-wound coils, terminal strips and rigid coaxial spacers.

PHYSICAL PROPERTIES

Specific Gravity	1.045 - 1.050

The low specific gravity of Rexolite #1422 permits a greater number of insulator parts to be fabricated per pound of material than is possible with a plastic of higher density. This advantage is reflected in lower cost per finished unit through the use of Rexolite #1422.

Tensile Strength—p.s.i.	8,000 - 10,000
Flexural Strength—p.s.i.—(ASTM-D638-42T)	15,000 - 18,000
Modulus of Elasticity in Flexure—p.s.i.	2.9 - 3.3 x 10^5
Compressive strength—p.s.i.—(ASTM-D649-42T)	18,500 - 19,000
Impact Strength Izod—ft. lbs. per inch of notch (ASTM-D256-43T)	0.25 - .35
Rockwell Hardness—H scale	68 - 72

The above data indicates that Rexolite #1422 is a strong and rigid material with high tensile and good impact strengths. This makes Rexolite #1422 especially favored for certain applications where the finished article must be able to withstand considerable strains and abuse under severe service conditions.

Coefficient of Linear Thermal Expansion—cm./cm./°C. (ASTM-D696-42T)	5.9 - 7.0 x 10^{-5}
Thermal Conductivity—cal./sec./sq. cm./°C./cm.	0.00025

Rexolite #1422 displays extremely low coefficients of thermal expansion. In applications where this plastic is used for high frequency insulation, compensations for dimensional changes with temperature are reduced to a minimum. In the engineering of UG type connectors, for example, closer fits of the beads within the connector are thus possible with minimum allowances for thermal contraction and expansion of the insulators. With proper designing, Rexolite #1422 assures no migration or distortion of the contact points in the temperature range under which the connector must operate.

POLYSTYRENE ROD — TUBING — SHEET

For radio and electronic applications, because of its very low loss factor at ultra high frequencies, Polystyrene is the ideal material for insulators, coil forms, shields, etc. It has excellent arc resistance, is non-tracking and has splendid insulating properties. Because its water absorption is practically zero it has excellent dimensional stability.

BUILT FOR RIGOROUS SERVICE

UNIVERSAL SWIVEL MOUNTS

Antennas built for the hardest mobile use. Separate components may be combined to meet any requirements. These rear-mounting Transmitting Antennas are designed for the 25-45 mc. services. Base mounts in such a way as to allow the whip rod to be held vertically regardless of contour of vehicle body.

← SPP-3B

SINGLE ROD

Special Alloy Whip Rod of maximum resilience and durability. 84" Single rod for use in the range of 30 to 45 mcs. Non-Corroding, stainless steel tapered for proper stress distribution. Base Adapter threaded ⅜-24 to permit mounting on SPP-3 Base or SPP-3A Spring.

Individually packed. Approx. wt.: 2½ lbs.

SPP-12 →

ADJUSTABLE 2-SECTION ROD

Adjustable Rod. Telescopes from 85" to 103" and is equipped with a locking device that permits removal of the whip rod and replacement at the exact previous length. Heavy wall, hard drawn brass tubing — threaded ⅜-24 to fit either SPP-3 Base or SPP-3A Spring. See SPP-3B for Rod description.

Ind. packed. Approx. weight: 2 lbs. 10 oz.

SPP-3

SWIVEL BASE

Swivel base for mounting at any desired point. Half balls of cast aluminum tapped ⅜-24 to accept whip rods and shock springs. Insulator of black bakelite — rubber gaskets — steel backup plate. All screws are Allen Head type with wrenches supplied.

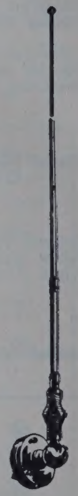
Individually packed. Approx. wt.: 1 lb. 10 oz.

SPP-3A

SHOCK MOUNTING SPRING

This sturdy spring is used to lessen damage to the whip rod. A flexible lead through the center of the spring maintains constant electrical impedance through the spring assembly. ⅜-24 stud on one end — ⅜-24 tapped hole on opposite end — approximately 6" in height — made of oil tempered wire.

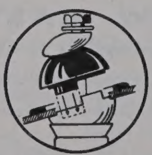
Individually packed. Approx. wt.: 2 lbs. 3 oz.



← NEW 10 METER MOBILE TRANSMITTING ANTENNA NEEDS BUT 1 HOLE FOR INSTALLATION!

Ward's SPP-143 transmitting antenna can be installed on cowl, fender or flat rear deck of any automobile without the necessity of drilling a series of unsightly holes. It is developed to use one 15/16" hole, that can easily be plugged or used to mount a Ward 8-Ball standard broadcast antenna. The short, standard 55½" rod reduces damage from overhead constructions.

MODEL SPP-143



NEW POLICE TRANSMITTING ANTENNA → GIVES COMPLETE DISGUISE TO DETECTIVE CARS

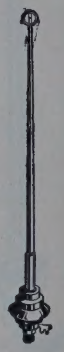
To any criminal a long whip antenna is a police car giveaway. To achieve complete disguise, Ward engineered a standard automotive aerial to withstand transmitting currents and permanently fix the rod length.

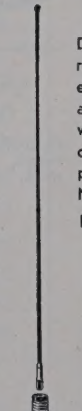
MODEL SPPB-71

MOTORCYCLE MOUNTS

These Antennas are designed for use on motorcycles and are built to withstand the rugged service and high vibration of vehicle. Rod is electrically short but can be used on all frequencies. 40" rod of same material as SPP-3B — ¼-20 mounting stud in insulator for mounting to motorcycle. Flexible base of rubber to allow movement when rod is bent — Model SPP-6 with safety ring tip — Model SPP-6A with stainless steel ball tip — no lead supplied. Individually packed. Approx. weight: 1 lb. 5 oz.

Model SPP-6—Ring Tip (Illustrated)
Model SPP-6A—Ball Tip (Not Shown)





ROOF TOP MOUNT

Developed for roof top mountings in 30 to 45 Megacycle range. Advantages of this type of antenna is that directional effects caused by car body shielding of antenna are avoided. Base is designed to be used with the SPP-3B rod which is sold separately. This unit consists of all components of Universal Swivel Mounts except that half-balls are replaced by SPP-3A Spring fastened permanently to insulator. No lead supplied.

Individually packed. Approximate weight: 3 lbs.

Model SPP-26 Base

ROOF TOP ANTENNA →

This model is designed for taxicabs, police services, and others using the 140 to 165 Megacycles frequencies. Installed entirely from the outside of vehicle — 12 ft. length of RG-58/U coaxial cable attached permanently to antenna. Whip rod is replaceable.

Individually packed. Approximate weight: 1 lb.

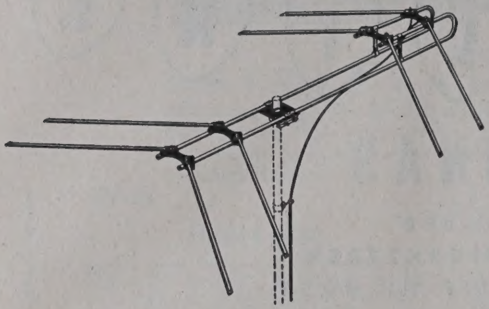
TROMBONE FOR BOTH UHF and VHF



MODEL TV-132

New high gain, fringe area, all-channel antenna. Designed to deliver high-gain on all channels. Has eight driven elements properly placed in streamlined manner. Equivalent to double and four stack models of some designs. Lightweight for tower mounting. All aluminum construction. Doweled elements. Completely preassembled; goes up in seconds. Windproof — vibration proof, as tested in 24 hour shake table test. Electrically engineered for sharp directivity — 300 ohm impedance — close match and low VSWR.

U-VEE

VHF and UHF ALL-CHANNEL HIGH GAIN SHARP DIRECTIVITY ANTENNA

First antenna to allow for UHF and still give top performance on VHF. Elements can be assembled at three different angles as shown in sketch. Position 1—VHF only; gains up to 8 db; exceeds most Yagis on high band. Position 2—VHF, UHF gain up to 6 db on VHF; to 12 db on UHF. Position 3—UHF only; gain up to 14 db.

Matches 300 ohm line. Impedance match comparable to commercial antennas. Completely preassembled. All aluminum construction, light, rugged, lasting. Streamlined for less wind resistance. Makes excellent appearance.

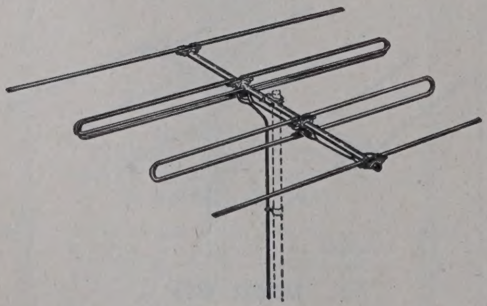
BROAD BAND YAGI HIGH GAIN ON 3 ADJACENT CHANNELS



MODEL TV-138

Designed to give uniform high gain coverage on channels 4, 5 and 6, it permits one fringe area antenna—only one lead. With three driven elements working together, it has these unique features:

- High gain on channels 4, 5 and 6, plus extra gain on channel 3.
- Highly efficient match to 300 ohm line.
- Exclusive interlocking dipole.

Has all-aluminum doweled elements, corrosion-proof Permatube crossarm. Hi-impact plastic insulator. Preassembled; installs in seconds.

The NO. 1 ALL-PURPOSE ROTOR *That Has Everything!*

Designed to give the trade everything they've asked for. To do this, it's taken time . . . lots of time and money and engineering skill . . . and NOW WE HAVE IT . . . . the best possible ALL-PURPOSE ROTOR! It's TOPS! Order them at your jobber NOW . . . be the FIRST with the BEST in your area!

MODEL TR-11 Complete rotor with handsome modern design plastic cabinet and illuminated meter control dial . . . fingertip lever . . . using 4-wire cable $44.95

★ Quick Mounting Antenna Mast Collet
★ Speedy Installation — No Loose Parts to Assemble
★ Takes Antenna Masts up to 1½" OD
★ High Torque
★ Instant Locking — will not drift
★ Instantly Reversible — makes complete revolution in 45 seconds
★ Completely Weather-proofed — Thoroughly Water-proofed
★ Less wind resistance
★ High strength with low weight
★ Fits standard towers

PREMAX Telescoping and Whip Antennas

PREMAX ALUMINUM ANTENNAS FOR LIGHT-WEIGHT VERTICALS

Premax Telescoping Adjustable Aluminum Antennas have light weight, corrosion resistance and adequate strength to meet needs for marine, mobile and commercial installations where convenience in erecting and dependable performance are essential. They are built up of specially-drawn, seamless, tempered aluminum tubing engineered to withstand wind velocities up to 60 m.p.h. Positive locking device is provided on each section.

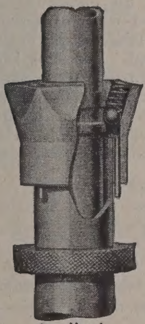
(For Base Insulators and Mountings, See Page S-65)

Low-cost, satisfactory, adjustable Steel Antennas for commercial, municipal, amateur, civil defense and other installations are made of high-tensile, copper-nickel steel tubing, heavily cadmium-plated and highly resistant to corrosion. They are fully telescoping and adjustable to any height by means of a positive locking device that also provides efficient electrical contact between the sections. We recommend the guying of all vertical antennas or supporting them by stand-off insulators against abnormal winds or severe strains. Steel antennas NOT recommended for marine use on salt water.



One-Hand Operation— Up or Down

PREMAX STAINLESS STEEL AUTO-MANIC MARINE ANTENNA

A Marine Antenna that can be raised or lowered with one hand when passing under bridges or other obstructions. It's the Premax "Auto-Manic" which has a locking device on each of its telescoping sections which allows free movement when the sliding sections are raised inches at a time with one hand, and locks them securely at any point when reverse pressure is applied. At full extension of each section, a positive locking action occurs which is proof against severe strains and vibrations. To lower the antenna, the touch of a finger raises a special ring on the base section, which releases the lower lock and the entire antenna, section by section, telescopes to its minimum 6 to 7-foot collapsed length.

This "Auto-Manic" Antenna is made up of 3 to 5 sections of a special grade of stainless steel tubing, hard-drawn to an extremely high tensile and yield strength. Standard Premax Mountings and Insulators will fit these antennas. "Auto-Manic" Stainless Steel Antennas are currently available only for military use.

ONE-PIECE SOLID GROUND TAPER WHIPS—TYPE E

Type E Antennas are designed for maximum strength with extreme flexibility and are available in two grades. Base diameter ¼″ tapering to 3/32″ tip. Easily cut to exact frequency as base requires no extra fittings for use with any Premax Mounting.

Chrome Silicon Steel Grade has exceptionally high tensile strength and uniformity of temper. Special heat treatment to insure high fatigue values. Cadmium-plated finish.

Stainless Steel Grade in a special formula which compares with spring steel in hardness and temper. Polished finish.

Type A Rods are made up of sections of varying diameters, joined securely and permanently into a solid step-tapered Antenna with ¼″ base diameter, ⅛″ tip, fitting all Premax Mobile Mountings. Two styles: An extremely high carbon content steel, heat-treated and oil-tempered, with heavy cadmium-plated finish; and in polished hard-drawn stainless steel, highly corrosion-resistant.

VHF ANTENNAS FOR 100 TO 250 Mc. OPERATION

CD-11, 100 to 230 mc. Rooftop Antenna—Requires single ½″ hole for mounting. High-tensile spring-steel wire whip, cadmium-plated.

CD-21, Temporary 100 to 300 mc. Rooftop Antenna—No hole needed! Heavy-duty suction cup holds indefinitely. Lug at base for co-ax. Easy to attach in emergency.

GP-31, 100 to 230 mc. Fixed Ground Plane Antenna—Cable drops down from waterproof housing through ½″ standard pipe of any height. Skirt wires can be bent to match co-ax.

DSH-118, a 152-162 mc. Rooftop Antenna that requires only a single small hole in car-top, which is sealed. Positively one-man installation.

A Center-Loaded Collapsible Type Antenna for marine use which provides a remarkable gain over the signal produced by a straight vertical where the loading coil is housed in the transmitter cabinet. At the high-frequency end of its 2 to 3 meg. range it gives a measured effective signal power gain of 6 db., equivalent to quadrupling transmitter power output. The base presents such a low impedance that little loss is experienced due to icing, wet weather or water spray. The line feeding the base is a low impedance line and is not critical as to length and body-capacity effects.

The Antenna consists of two telescoping adjustable base sections of seamless aluminum, monel or stainless steel tubing on which the loading coil is mounted, with a top whip section, giving a total extended length of about 17 ft. The antenna collapses to a single unit with the whip section telescoping through the coil into the lower section, making a collapsed length of 7 ft. The coil is wound on low-loss bakelite tubing and treated after assembly with weatherproof varnish. Monel and stainless steel types are currently available only for military use.

Type B25-SV

SERIES B LOW-COST CENTER-LOADED ANTENNAS

To meet the need for low-cost center loaded antennas which are now a "must" for mobile and marine communications between 2 and 8 mc., Premax has developed an outstanding series of Antennas that have won wide acclaim. They consist of a 6 ft. tapered whip of hi-carbon heat-treated steel mounted above a loading coil and a special base rod 24″ long, with couplings to fit any standard Premax Mobile Mounting, making a 9½ ft. overall height. The coil is wound on a treated wood form, then weather-proofed with low-loss insulation varnish. With these Premax Center Loaded Antennas a gain of 8 db. or more can be secured over conventional whip types, equivalent to multiplying the power by 6.3 times—a most inexpensive way of extending both transmitting and receiving range. In cases where it is impossible to use the 9½ ft. height, the 24″ base section may be omitted, which reduces the effective gain to about 6 db., still equal to quadrupling the power over a straight vertical antenna.

SERIES B MARINE ANTENNA

The Series B Marine Antenna for 2000 to 3000 ky., as described above, comes complete with either the XL or V Type mounting, or you can, at a small additional cost, include the Spring Mounting which is very effective in counteracting pitching or shock. Stainless Steel Whip and Base Section.

SERIES B COVERING AMATEUR "75", 14 AND 10 METERS, C.A.P., AIRPORT AND PUBLIC SERVICE FREQUENCIES, 2 TO 8 MC.

The basic 75 meter Antenna covers the entire mobile phone band. It may also be used for multi-band amateur operation by shorting out turns (approximately 75% on 14 Mc.) or by completely jumpering out the coil to make an efficient quarter-wave antenna on 10 meters. Can be used with any standard Premax Mounting shown on page S-65.
Also available for the 2374 Ky. C.A.P. band and the 3105 Ky. Airport band. Coils for other frequencies on special order.

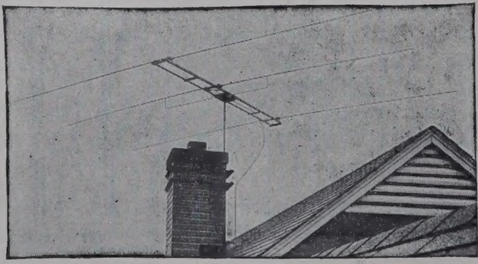
PREMAX ROTARY BEAM KIT—6, 10 AND 11 METERS



A Rotary Beam Kit with braced frame of heavy-duty aluminum angle and solid bakelite insulation blocks that will not crack or snap under vibration and shock make this 20-pound Beam for 6, 10 and 11 meters popular with amateurs. Each telescoping element can be tightly clamped to provide positive adjustment. Parasitic elements may be left open at the center with tuning hairpins inserted or may be used as six elements on 6 meters. The RB-6309 Kit includes frame and three pairs of elements with necessary insulators and hardware, including T-match accessories but without transmission line. Complete in a single carton with assembly instructions.

MOBILE MOUNTINGS

TYPE R Universal Mounting consists of solid aluminum split-ball fixture which can be adjusted to any angle. Attaches thru heavy plastic insulation disc fitted with waterproof gasket. New type backplate provides positive ground and shielding for co-ax connector. Fits any ¼″ dia. antenna.

TYPE RS Universal Mounting is similar to above but with spring as detailed under Type S.

TYPE F 30° Adjustable Mounting for fender, cowl or gravel pan. Chrome-plated brass with heavy bakelite insulation. Replaces any existing fender or cowl antenna without new holes. Fits ¼″ whip.

TYPE S Spring Mounting for roof or horizontal surface. Heavy - duty spring with bakelite insulation, rubber gasket and steel backplate. Compression type clamp fits any ¼″ whip. Overall height about 5″; base diameter 3″.

TYPE SA Spring Adaptor, a supplemental mounting similar to Type S which can be attached to Type K, L, TA or NA to convert to spring mountings. Height 4¾″, diameter 1⅝″.

TYPE L Bumper Mounting permits 10″ adjustment in antenna height. Has two pairs of ceramic insulators spaced 6″ apart. Compression clamp for any ¼″ whip. Bracket parts cadmium-plated.

TYPE XL Panel Mounting, similar to Type L except it does not have steel bumper bracket.

TYPE K Bumper Mounting permits 10″ maximum height adjustment of antenna. Heavy-duty glazed ceramic cones, heavily cadmium - plated steel bracket. Compression clamp fits any ¼″ whip.

TYPE TA Trunk or Panel Mounting fits any contour of surface. White glazed ceramic cone insulators, lower support a solid brass rod joined to 12″ brass tube with locking device at top; upper support 24″ brass rod adjustable at any height on tube. Antenna tube provides 10″ maximum height adjustment. Compression clamp fits any ¼″ whip. All metal parts heavily cadmium-plated.

TYPE NA Bumper Mounting permits attachment by means of two heavy bolts and steel backplate. Special heavy duty glazed ceramic cone with compression clamp that fits any ¼″ whip.

TYPE V Thru - Deck Mounting for B-25 or similar antennas. White porcelain cones, brass stud threaded 7/16″-24. Maximum opening 1½″ between cones.

WALSCO SILICONE COMPOUND

WALSCO
SILICONE

For treating TV and amateur antenna lead wires, insulators and terminals to prevent impedance changes due to moisture conditions. Effective even in seacoast and marine locations.

This compound also prevents high voltage breakdown and arcing under humid conditions since it forms a moisture-repellent high-dielectric seal. WALSCO Silicone is very effective in waterproofing and preserving automobile and aircraft spark plugs and ignition systems.

WALSCO TELEVISION ANTENNAS

Exclusive advantages available in WALSCO Antennas assures outstanding performance in any climate . . . anywhere. All WALSCO antennas are unconditionally guaranteed for one full year. WALSCO originated the high tensile butt-seamed tubing in order to provide greater flexibility. It will not bend or break under adverse weather conditions. As a result of the exclusive U-bolt design, using hardened, serrated steel clamps, turning or slipping of the antenna on the mast is positively prevented. Antenna elements are made of special chromium - magnesium - aluminum alloy which has a 94% higher tensile strength than regular aluminum generally used for antennas. Special fold-over terminals with built-in strain relief are supplied with all WALSCO antennas and stacking bars. Stacking Kits are precision engineered for each antenna model and are formed to provide for an exact match to the transmission line. This guarantees maximum performance on stacked arrays.

WALSCO SIGNAL KING ANTENNA

The one antenna that does more to guarantee outstanding reception, trouble-free performance even in the fringe areas. The WALSCO Signal King, with its amazing new patented design, assures longer, dependable service under the most adverse weather conditions.

IMPORTANT FEATURES OF THE NEW SIGNAL KING ANTENNA

- High gain on all channels—no weak spots. Readily stacked for fringe area reception.
- Radically new insulator design (Patent Pending). Guaranteed unbreakable—outstanding and lasting dielectric properties, under all climatic conditions. Nothing like it anywhere.
- Marine type aluminum alloy elements. One end reinforced, other end sealed.
- Hi-Speed assembly—two nuts, three thumbscrews—takes less than two minutes. No loose hardware or parts.

OUTSTANDING FEATURES OF THE WALSCO "DOUBLE-VEE" ANTENNA

- Extra-high gain on all channels.
- Highly directive—eliminates or reduces ghosts and interference.
- Completely assembled—no loose parts—ready in less than 30 seconds.
- "Twinlube" elements eliminate mechanical failure—even under severe weather conditions.
- New molded insulators guaranteed unbreakable—outstanding and lasting dielectric properties—nothing like it anywhere.
- Marine-type, chromium-aluminum alloy elements—closed outer ends.

WALSCO V-KING

A quality conical antenna embodying many outstanding and unique features, improved mechanical design and excellent gain characteristics over entire TV spectrum. Readily stacked for fringe area reception.

WALSCO V-KING . . . The Quality Antenna

- New unbreakable high-impact styron insulator—silicone treated. Ideal for industrial or beach locations where soot or salt deposits are encountered.
- High tensile aluminum alloy element. Reinforced on clamped end—sealed on outer end to prevent wind noise or breakage.
- Weather-proof . . . corrosion-resistant alloys and A.N. specification plated hardware used exclusively.
- Fast assembly—Readily stacked.

RCA ELECTRONIC COMPONENTS

TELEVISION ANTENNAS

COMPLETELY NEW DESIGN — BUILT TO LAST RCA 12-CHANNEL TELEVISION ANTENNA — TYPE 215A1

BASED UPON YEARS OF FIELD EXPERIENCE

• **Easily Assembled** • **Ruggedly Constructed** • **Uni-Directional**

Here's an RCA "Leader" to meet the majority of your everyday antenna needs. Engineered and developed by RCA for plus-value service, RCA-215A1 is intended for use in most receiver locations where both high and low-frequency stations are in the same general direction. Unique RCA "V" attachments provide uniform directional characteristics for all 12 channels.

RCA-215A1 12-Channel Television Antenna is simple in design and appearance. Sturdily built of aluminum, it will withstand high winds, sleet, and ice. Designed for use with 300-ohm transmission line, the 215A1 rates "A" for antenna achievement: — for over-all performance and unusually flat response over each of the two television bands.

Supplied with all necessary hardware but less mast. Completely illustrated instructions for installation are included.

THE RCA REVERSIBLE-BEAM TV ANTENNA ARRAY — TYPE 212A1

For Locations with Co-channel Interference

The RCA Reversible-Beam TV Antenna Array receives signals from only one direction at a time; eliminates co-channel interference where stations are approximately 180° apart. It also eliminates adjacent-channel interference where the receiver lacks selectivity. RCA-developed "V" attachments provide uniform directional characteristics for all twelve channels. A high overall front-to-back ratio is achieved through the use of driven elements, instead of parasitic elements. This design also makes possible the unique feature of lobe switching.

Sturdily built throughout of high-quality aluminum, the RCA Reversible-Beam Antenna consists of an array of four eight-foot dipoles in the form of a square. A dual transmission line connects the horizontal and vertical dipoles to an attractively packaged diplexing network located at the rear of the receiver. By the mere flick of a switch on the diplexer, antenna directivity can be reversed.

RCA FM FOLDED-DIPOLE ANTENNA AND REFLECTOR

Engineered by RCA for use with FM receivers having a 300-ohm input, the RCA 229A1 has an unusually flat signal response providing efficient coverage of the entire FM band from 88 Mc to 108 Mc. Excellent for use in fringe area installations, the 229A1 has high uni-directional gain—maximum interference rejection in opposite direction—requires no adjustment of elements, and is easily oriented for maximum signal. Constructed of lightweight aluminum elements for greater durability . . . easy to install, no special tools needed. Complete with all hardware.

JC YAGI

SINGLE BAY 5 ELEMENT

A high gain, 5 element Yagi that provides powerful signal at low cost. Pre-assembled for fast, easy installation. JC Yagis may be stacked for additional gain by using VEE-D-X phasing harness. Antennas and harnesses are ordered by channel number.

WORLD'S MOST POPULAR YAGI

The VEE-D-X JC is by far the most popular Yagi for performance, construction and ease of installation. Perfected by VEE-D-X engineers in collaboration with a foremost authority on wave propagation, these stacked arrays make a world of difference in picture quality. Choice of array depends on area terrain and reception conditions.

- **Standing wave ratio 1.28**
- **Center impedance 317 ohms**
- **Supplied with mast clamp**
- **Excellent signal-to-noise ratio**
- **Most compact five element beam on the market**
- **High forward gain**

VEE-D-X SECTIONAL TOWER

For Microwave — Communications — TV & FM — Radar

VEE-D-X towers are designed for use at any height from 10 to 200 feet, depending on load. They are self-supporting up to 20 feet and, where space is limited, semi-guyed* type installations may be used at 30, 40, and 50 foot heights. To facilitate erection of tower, the base mount is hinged so that several sections may be assembled on the ground and swung into position. VEE-D-X towers may be ordered by separate components or as a complete package for a specific height. (Either guyed or semi-guyed.)

* Semi-guyed towers employ one set of guy cables attached at a height of 10 ft. up the tower and anchored at a 6 ft. radius from the base.

- **Rugged, all-welded construction diagonally laced with angle iron for maximum rigidity.**
- **Can be erected on ground or on flat or peaked roof.**
- **Patented plate spaced at two foot intervals prevents twisting and affords rigidity found in no other tower.**
- **Safe and easy to climb.**
- **Completely galvanized, light weight tubular steel . . . 20 ft. section 80 lbs.**

Written "Unconditional Guarantee" with each unit:

UNBREAKABLE: Will not break when dropped from heights of 6 feet. Top plates are made of solid bakelite securely mounted on a heavy metal base.
RUSTPROOF: Triple-section brass telescopic dipoles (not steel) will not rust, assuring permanent contact and easy telescopic adjustment.
TILTPROOF: Heavy base prevents tipping with any combination of extended elements.

All channel reception—concealed wiring—felt padding. Gleaming bakelite plates on matching crackle finished metal base, makes Indoor-Tenna a most attractive unit.

Individually packed in an attractive 2-color carton. Shipped 25 to a master carton. Weighs 1½ lbs., measures 18" (closed) x 2" x 4".

Model TV-8....................Competitively Priced for Volume Sales

All Spico TV and FM Indoor Antennas feature:

• Plated brass tubing or unplated • All concealed wiring • Non-scratch pad • No lugs or solder shown • Complete with 300 ohm wire.

Spico, the TV and FM Indoor Antenna line carried by leading jobbers as one of their fastest selling—most profitable lines.

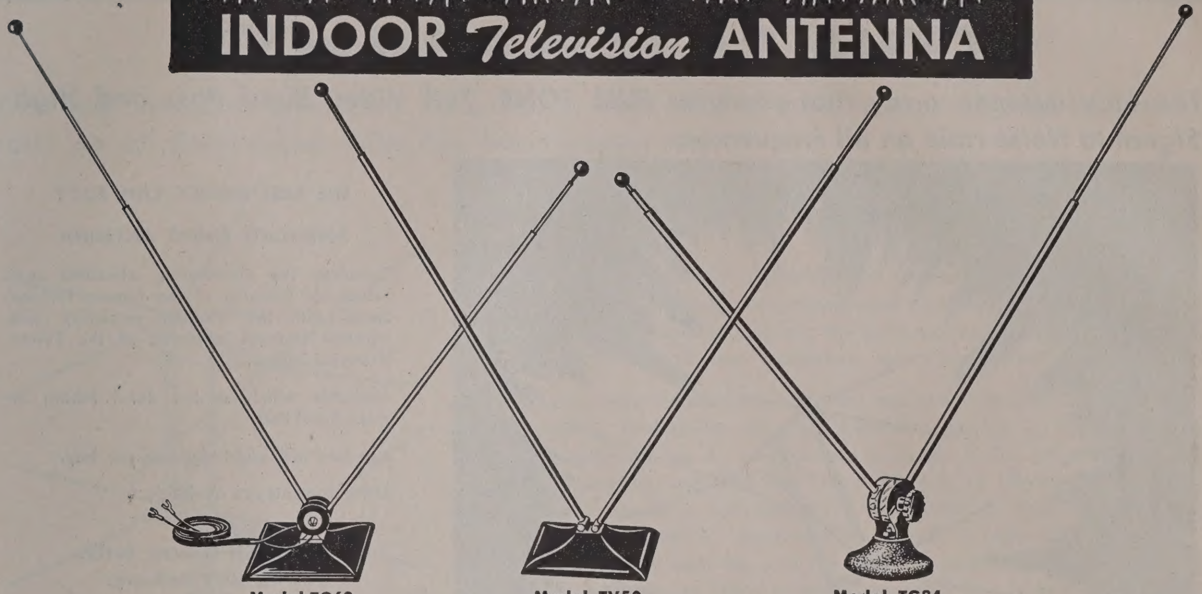
GOLDEN WAND
INDOOR *Television* ANTENNA



Model TG62 **Model TV50** **Model TG84**

SUPERIOR PERFORMANCE AT LOW COST

The strength of an incoming TV signal picked up by your antenna is infinitesimal. Only an efficiently designed antenna can preserve its strength and make it available to your receiver. GOLDEN WAND Indoor TV Antennas are engineered to deliver to your receiver all the strength of the TV signal without losses. Because of their superior design, better materials and skilled craftsmanship, GOLDEN WAND Antennas bring you a clearer, brighter picture on your screen. They offer full 12-channel reception plus FM.

PORTABLE, IDEAL FOR DEMONSTRATIONS

GOLDEN WAND TV Antennas are extremely portable; can be carried into the house and from room to room without effort. That's why servicemen use GOLDEN WAND in making home demonstrations. That's the reason why many TV owners use GOLDEN WAND to make TV reception available in every room of the house.

WHERE ROOF ANTENNAS ARE TABOO

Restrictions against roof antennas by landlords need not worry you. GOLDEN WAND will bring you excellent reception in areas where indoor antennas can be used without the erection of an outdoor antenna.

THREE MODELS

GOLDEN WAND Indoor Television Antennas are offered in three designs to suit all tastes. All are attractive in appearance, well built and will last a lifetime. *All models are tip-proof.*

Model TG62 — Three-section satin finish *Admiralty brass* dipoles. Constant tension at all telescopic joints provides perfect electrical contact and velvety smooth jamless telescopic action. Base is of walnut-mahogany polystyrene heavily weighted and padded. Slot in base is provided for mounting on wall, window frame or ceiling. Harmonizes with any room or furniture. Furnished with 300-ohm twin lead. List price, **$5.95**

Model TG50 — Two-section polished finish *Admiralty brass* dipoles. Unique design at all telescopic joints provides perfect electrical contact and jamless, smooth telescopic action. Base is of walnut-mahogany polystyrene heavily weighted and padded. Slot in base is provided for mounting on wall, window frame or ceiling. Harmonizes with any home decoration. Furnished with 300-ohm twin lead. List price, **$3.95**

Model TG84 — Three-section satin finish *Admiralty brass* dipoles. Constant tension at all telescopic joints provides perfect electrical contact and velvety smooth jamless telescopic action. Base is heavily weighted and padded and finished in gold. Harmonizes with any room or furnishings. Furnished with 300-ohm twin lead. List price, **$6.95**

Exclusive Features

1. Unique design at all joints gives perfect electrical contact and smooth, jamless telescopic action.

2. *Admiralty brass* dipoles provide maximum electrical conductivity and eliminate internal corrosion and need for oil.

3. Polystyrene base and insulators give better insulation to prevent losses. Terminals completely enclosed. Built-in strain suppressor relieves strain on terminals and prevents breakage.

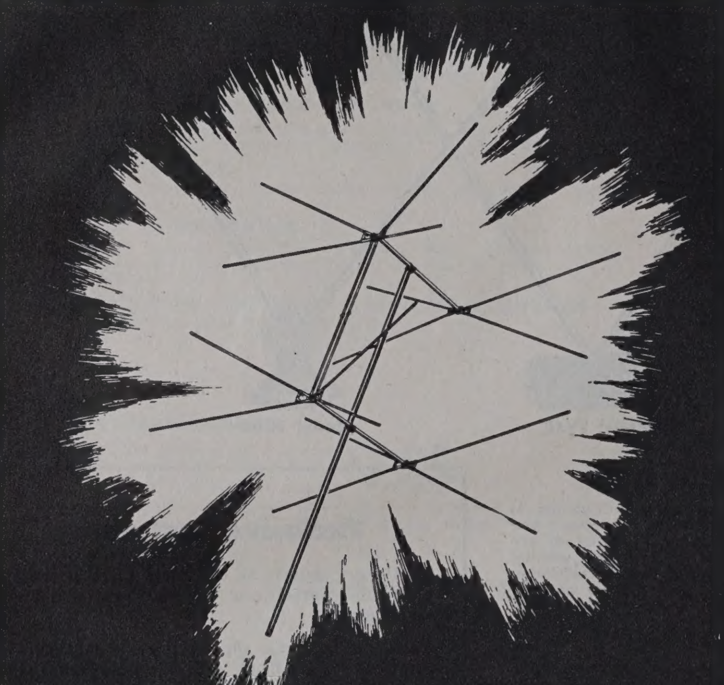
"CONICAL-V-BEAMS"

The only antenna array that produces FULL TONE, Full Video Band Pass and High Signal to Noise ratio on all Frequencies.



America's Standard of Comparison

No Other Antenna Type Can Have All These Features.

- ★ All-Station Reception. 10 to 11 db gain
- ★ FULL audio and Video Response
- ★ Maximum signal to noise ratio
- ★ Better than 12 db Front to Back Ratio on all Frequencies
- ★ The only antenna that will produce gain and bandwidth on the new UHF
- ★ A Model for every reception area — primary to extreme fringe.
- ★ "Conical-V-Beams" are produced under Re-issue Patent No. 23,346

TECHNICAL NOTES

Telrex "Conical-V-Beams" technically and practically assume characteristics similar to solid cones, giving broad band and high gain response with full audio and video band pass over the entire television frequency range. Therefore, "Conical-V-Beams" outperform any other television antenna.

Nominal center impedance is 150 ohms and non-varying due to conical configuration. The dipoles are tilted forward presenting a "V" to the incoming wave, forcing the forward lobe to remain in line irrespective of channel being received. Thus the Telrex dipole is an effective ½ wave element on channel 2, increasing to ⅝ wavelength on channel 3, and increasing in effective "V" beam action to channel 13 where it becomes a full wavelength on each leg with the maximum receiving lobe being in line. The reflectors are effective at all frequencies with a front to back ratio of better than 12 DB on all frequencies. The "Conical-V-Beam" is the only antenna which can produce in this manner.

Unlike other methods of covering both bands, Telrex "Conical-V-Beams" do not introduce phase shift or favor one band versus the other, and, only one transmission line is used. Where stations are displaced beyond the normal acceptance lobe of a single "Conical-V-Beam" or array, the DO-X (Duo Orienting) array is recommended. This permits separate orientation of two groups of stations at any angle. Only one transmission line is needed due to the unique Telrex coupling line and phasing loop.

When the stations are within a 5 to 15 degree sector, the Telrex "Conical-V-Beam" used for maximum efficiency at low frequencies becomes a much more efficient antenna on the high frequencies than a separate cut-to-frequency stacked antenna.

The 150 ohm non-varying center impedance makes it possible to use any of the commercially available transmission lines from 75 ohm coaxial, to 300 ohm ribbon, with a standing wave ratio never exceeding 1.6 to 1 on any channel. Standing waves cause excessive phase-shift, blurred pictures, multiple images and decreased sensitivity.

An 8X-TV "Conical-V-Beam" will outperform any cut-to-frequency antenna on the market.

You are invited to consult our engineering staff on any unusual antenna problems.

"Conical-V-Beams" are produced under RE-issue Patent No. 23,346.

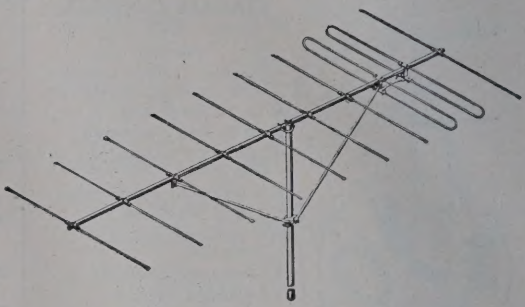
TACO NOISE-REDUCING ANTENNA SYSTEMS

HIGH-GAIN TELEVISION ANTENNAS

SILVER STREAK TWIN-DRIVEN 10-ELEMENT YAGI

For Channels 2-6

A new addition to the TACO line of fringe-area antennas. The TACO Silver Streak antenna incorporates 10 elements properly spaced and cut to obtain maximum gain without narrowing 6 mc bandwidth. Seven directors, two driven elements, and a reflector make up this super gain design. High front-to-back ratio overcomes co-channel interference as well as noise and ghost pickup. Available as a single antenna, or a stacked array. Single antenna provides a gain of 11 db, while stacked array provides 14 db. Twin elements driven in parallel provide terminal impedance of 300 ohms for match to transmission line. All-metal construction, properly designed, withstands adverse weather conditions. Tuned for any one of the low-band channels. Especially adaptable for use with TACO Antenna Supercharger.



Cat. No. 1800-(*) SINGLE-BAY TWIN-DRIVEN YAGI ANTENNA. Consists of: 1 crossarm assembly supporting two antenna elements; seven directors and one reflector. Jiffy-Rig construction. Shipping wt. 14½ lbs. **Ch. 2-3-4 $35.00 — Ch. 5-6 $31.00**

Cat. No. 1801-(*) STACKED YAGI ANTENNA. Consists of: 2 Cat. No. 1800-(*) assemblies with stacking lines. Shipping wt. 29 lbs. **Ch. 2-3-4 $71.00 — Ch. 5-6 $63.00**

Cat. No. 1802-(*) STACKING LINES FOR TWO-BAY YAGI ANTENNA. Converts 2 one-bay Cat. No. 1800-(*) antennas to a two-bay stacked antenna. Shipping wt. 2 lbs. **List Price $5.25**

SILVER STREAK 10-ELEMENT YAGI

FOR CHANNELS 7-13

The high-band version of the above model. Provides approximately same gain as low-band model. Utilizes 8 directors, one driven element and a reflector. Designed primarily as a fringe-area antenna, but may be used in noisy, or ghost-haunted areas where its sharp directivity rejects unwanted noise and signals. Sharp frequency tuning of all Yagi designs minimizes reception of signals outside the channel frequency. Both high-band and low-band model Silver Streak antennas especially adaptable for use with TACO Antenna Supercharger. Perfect mechanical balance lends this antenna for use with rotator. All TACO antennas come factory-assembled for fastest installation. Two-diameter antenna element raises terminal impedance to match 300-ohm transmission line for maximum transfer of energy.

Cat. No. 1850-(†) SINGLE-BAY YAGI ANTENNA. Consists of: One crossarm with U-Bolt and saddle; One two-diameter driven antenna; One reflector and eight directors mounted on crossarm. Click-Rig construction. Shipping wt. 6½ lbs. **List Price $13.75**

Cat. No. 1851-(†) STACKED YAGI ANTENNA. Consists of: 2 Cat. No. 1850-(†) assemblies with stacking line. Shipping wt. 14 lbs. **List Price $27.75**

Cat. No. 1852-(†) STACKING LINES FOR TWO-BAY YAGI ANTENNA. Converts 2 one-bay Cat. 1850-(†) antennas to a two-bay stacked antenna. Shipping wt. 1 lb. **List Price $2.50**

UHF RECEIVING ANTENNAS

TACO has a complete lines of UHF antennas ready for the trade. These antennas have been thoroughly tested and proved under actual operating conditions.

As in the case of VHF, TACO will present antennas designed to meet the varying conditions of different areas where UHF will be operating, as to gain, directivity, and bandwidth. A complete, fully detailed description of UHF antennas will be available shortly through TACO distributors.

TACO enters the UHF field with a definite advantage over other antenna equipment manufacturers. During World War II and again in the present rearming program, TACO has played an important role in the development and manufacture of UHF equipment for our armed forces. This experience in the reception and handling of UHF is clearly shown in the performance of the present commercial TACO UHF antennas.

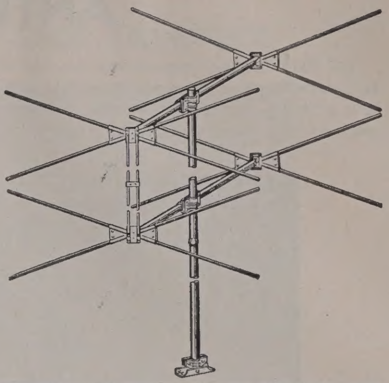
HIGH-GAIN TELEVISION ANTENNAS

LAZY-X ALL-CHANNEL ANTENNA



The most popular all-channel antenna for average to strong signal areas. Provides a relatively flat gain over all 12 channels. Extremely rugged construction due to exclusive TACO apex design with bell-mouth channels for element rods. Readied for installation in a matter of minutes with TACO Jiffy-Rig design. An excellent antenna for weak signal areas where noise level is low. Directivity and noise rejection not as good as TACO Yagi designs. Available as a stacked array or a single antenna, depending upon signal strength available at installation.

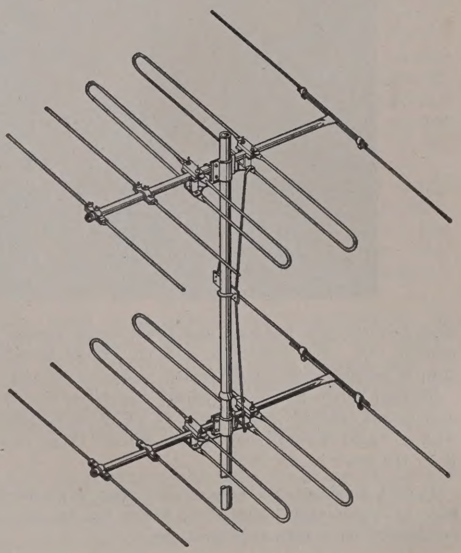
Cat. No. 950AL. STACKED LAZY-X ANTENNA for Channels 2-13. Consists of: 2 single X antennas with crossarms and X-type reflectors; stacking lines and terminal panel for connecting antennas; mast swivel bracket; 3 screw-eyes; 1 guy anchor, 2 mast insulators; complete instructions. Shipping Weight 12 lbs. **List Price $31.00**

Cat. No. 953A. SINGLE LAZY-X ANTENNA. Consists of: Single X antenna with crossarm and X reflector; all elements and crossarm of hard drawn aluminum tubing; Universal U-bolt and saddle bracket mount; complete instructions. Shipping Weight 5 lbs. **List Price $14.00**

Cat. No. 954A. STACKING LINES for stacking two single-bay antennas. Shipping Weight ¾ lb. **List Price $2.50**

Cat. No. 949A STACKING LINES for stacking two 2-bay antennas. Complete with terminal panel on mast and four stacking lines. Shipping Weight 1½ lbs. **List Price $4.75**

5-ELEMENT TWIN-DRIVEN YAGI



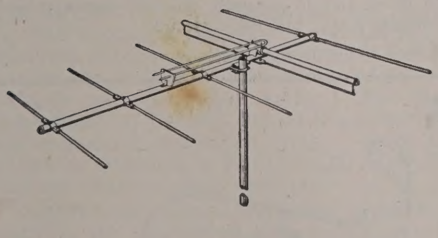
An exclusive TACO design. Never successfully duplicated. Used more widely than any other fringe area design. Comes tuned for any one of the low-band channels, or in a combination model for channels 4 and 5. Incorporates two directors, two driven elements, and a reflector. Very good directivity and front-to-back ratio. Highly recommended for areas affected by co-channel, or adjacent channel interference. Folded-dipole driven elements fed in parallel, raises terminal impedance to match 300-ohm line. Mechanically, the Twin-Driven Yagi has proved itself in more installations than all other fringe area designs combined. Available as a stacked array or a single antenna, depending upon gain required. Single antenna unit suited for use with rotator. Both models designed for use with TACO Antenna Supercharger.

Cat. No. Super 980-(*) STACKED TWO-BAY TWIN-DRIVEN 5-ELEMENT YAGI. Consists of: 2 crossarm assemblies, each supporting two folded dipole antennas, two directors, one reflector; transmission line for stacking the two bays; tie wire; complete instructions. Shipping Weight 14 lbs. **List Price $47.00**

Cat. No. Super 981-(*) SINGLE BAY TWIN-DRIVEN 5-ELEMENT YAGI. Consists of: one crossarm assembly supporting two folded dipoles, two directors, one reflector; complete instructions. Shipping Weight 8 lbs. **List Price $23.00**

Cat. No. 989-(*) STACKING LINES for Two-Bay Twin-Driven Yagi antennas. Consists of all parts necessary to convert two Super 981-(*) antennas into one Super 980-(*) antenna. Shipping Weight 2 lbs. **List Price $5.25**

DUAL-CHANNEL YAGI



Another new fringe area design by TACO. Provides all the desirable features of the Yagi design for a combination of two channels, with a single antenna. Tuning element adjusted at factory for desired channel combination. Combinations available as listed below. Antenna incorporates three directors, driven element with tuning bazooka, and reflector. Excellent front-to-back ratio. Low wind resistance makes this antenna especially adapted for use with a rotator. Sharp tuning and directivity minimize noise and ghost pickup. Terminal impedance matches 300-ohm line. Available as stacked array or single antenna. Completely factory-assembled for easiest, best installation.

Cat. No. 1410-(*-*) SINGLE-BAY DUAL-CHANNEL LOW-BAND YAGI. Consists of: 1 crossarm assembly with U-Bolt and saddle; One driven element with factory-tuned bazooka; One reflector and three directors. Shipping Weight 7 lbs. **List Price $22.50**

Cat. No. 1411-(*-*) STACKED DUAL-CHANNEL LOW-BAND YAGI. Consists of: Two Cat. No. 1410-(*) assemblies with special stacking lines. Shipping Weight 15 lbs. **List Price $46.00**

Cat. No. 1412-(*-*) STACKING LINES FOR TWO-BAY YAGI ANTENNA. Converts 2 one-bay Cat. No. 1410-(*-*) antennas to a two-bay stacked antenna. (*-*) Available combinations 3-6; 4-5. Shipping Weight 2 lbs. **List Price $5.25**

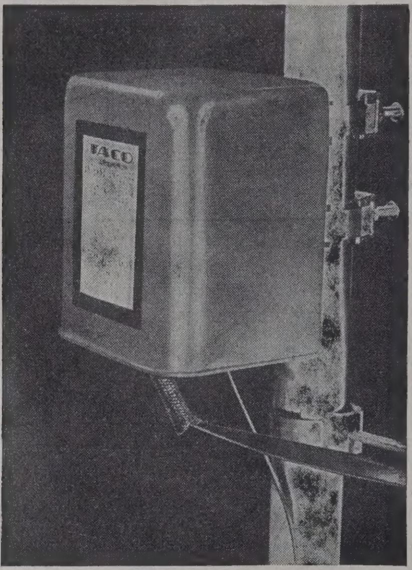
ANTENNA SUPERCHARGER

The TACO Antenna Supercharger has proved itself the most successful television signal preamplifier on the market. It is unique in that it is a high-gain, dependable power amplifier located on the antenna mast, at the antenna. As such, it amplifies the signal before it is weakened through line-loss, and before noise pickup in the transmission line. This results in a much higher signal-to-noise ratio than is possible with old-fashioned boosters located at the receiver.



Through sharp frequency tuning, signals outside the desired frequency are rejected, and a gain of 14 db is realized. When used with a TACO Twin-Driven "Silver Streak" Yagi, the overall gain is in the order of 28 db.

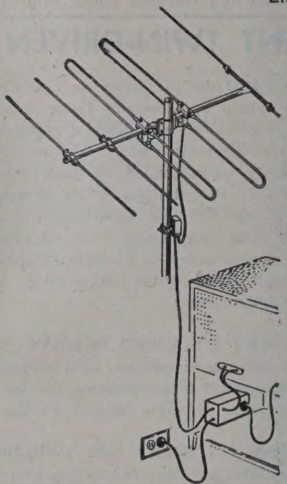
Special emphasis has been placed upon dependability so necessary in fringe area installations where the antenna and amplifier are located on a high mast or tower.

The amplifier unit is powered by means of a transformer, located at the receiver, that provides 24 volts through the transmission line up to the amplifier. The same transmission line is used to carry the signal down to the power unit. From the power unit, the signal is fed into the receiver antenna terminals. The receiver power cord is plugged into the power unit for operation of the automatic relay switch. This provides automatic operation when the receiver is turned on.

This type of signal amplification is very necessary with today's receivers incorporating the cascode-type front-end. Signals amplified through boosters located at the receiver have a far greater noise level than the front-end itself, thus defeating the purpose of this high-gain receiver design.

The Antenna Supercharger comes tuned for any one of the low-band or high-band channels or for the combined channel 4 and 5 setup. They are recommended for use with any high-gain, sharply tuned antenna such as the TACO Twin-Driven Yagi, the Silver Streak antenna or the TACO Yagis listed in the general catalog.

Cat. No. 1625-(*) SINGLE CHANNEL COAXIAL CABLE ANTENNA SUPERCHARGER. Consists of amplifier, coaxial fittings, mounting brackets, necessary hardware. Shipping Weight. 2½ lbs. **List Price $27.50**



Cat. No. 1626 24 VOLT TRANSFORMER to supply power to No. 1625 Antenna Supercharger. In attractive housing.

Cat. No. 1628-(*) SINGLE CHANNEL ANTENNA SUPERCHARGER WITH MIXER. Consists of amplifier, power mixer, mounting brackets, necessary hardware. Shipping Weight 4½ lbs. **List Price $37.95**

Cat. No. 1629-(*) SINGLE CHANNEL ANTENNA SUPERCHARGER. Consists of amplifier, mounting brackets, necessary hardware. Shipping Weight 2½ lbs. **List Price $23.95**

Cat. No. 1631 AUTOMATIC POWER MIXER. Consists of power supply relay and mixer unit in attractive housing, necessary hardware. Shipping Weight 3 lbs. **List Price $15.00**

*Specify desired high or low band channel.

CAT. NO. 624 FM OMNIDIRECTIONAL ANTENNA

The most popular of the many TACO FM antenna designs. The folded dipole provides a flat response over the entire FM band, while the S-shape provides a directivity pattern practically circular in shape. Ideal for use in installations where signals are received from several directions. Extremely sturdy. Available as a stacked, or single antenna. Terminal impedance of 300-ohms.

Cat. No. 624 OMNIDIRECTIONAL ANTENNA. Consists of: 1 S-type folded dipole with terminal panel; 1 five-foot aluminum mast, 1¼" dia.; 2 mast insulators, 60 foot transmission line; 2 ribbon type standoff insulators; 2 mast clamps with mounting screws; complete instructions. Shipping Weight 4¾ lbs. **List Price $12.00**

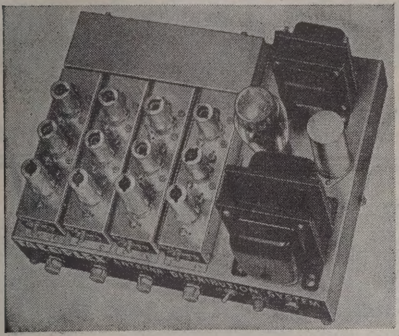
TACO NOISE-REDUCING ANTENNA SYSTEMS

MASTER TV ANTENNA SYSTEMS

SERIES 1500 TACOPLEX



The Series 1500 Master TV Antenna Distribution System is in wide use for apartments, hotels, stores and community antenna systems. All units making up the system are designed and manufactured to provide the utmost in dependable and economical operation.

The Series 1500 TACOPLEX System consists of the antenna installation, the Master Chassis with Amplifier Strips, Mixer Unit, Electronic Multi-Line Units, and Isolation Units. Detailed information on all units and their functions is available from your TACOPLEX distributor.

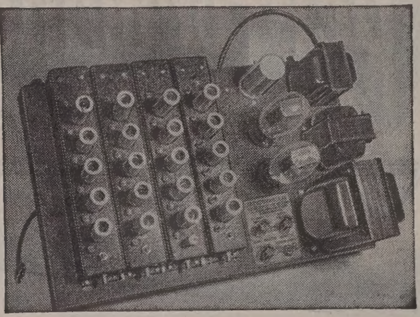
The signal is captured by sharply-tuned, high-gain antennas for each channel. If signal strength is not up to the desired 500 microvolt strength, a TACO Antenna Supercharger is employed at the antenna to boost the signal. The signal is then transmitted to the Master Chassis and through an Amplifier Strip. The TACOPLEX Amplifier Strips are available in two types — one incorporating three tubes and the other four tubes. Depending upon the requirements of the individual system, the correct type is selected. After amplification in the Amplifier Strips, the individual channels are mixed by means of the Mixer Unit.

The TACOPLEX Mixer Units are available for various system requirements. It is possible to provide isolation for several receivers directly from the Mixer outputs. Other models provide high-strength outputs for long transmission line runs.

After combining the channels in the Mixer, the TACOPLEX System utilizes coaxial transmission line for distribution of the signals. If runs are in excess of 2500 feet, it is necessary to reamplify the signals. This is done by means of additional TACOPLEX Master Chassis and Amplifier Strips. The signal is fed through a TACOPLEX Signal Separator and then into the respective Amplifier Strips. Again the signal is mixed by means of a TACOPLEX Mixer Unit and fed into the transmission line.

TACOPLEX Multi-Line Units provide a means of splitting the transmission lines into several separate lines with minimum loss of energy. Isolation Units of selective attenuation are available for use at receiver take-offs. These units provide a minimum of 30 db isolation between receivers. TACOPLEX Termination Units provide a constant level of signal throughout the system.

SERIES 2500 TACOPLEX



Designed for master antenna systems requiring more RF power than provided in the 1500 Series. The TACOPLEX 2500 Series Master Antenna Distribution System provides several times more power than any other master antenna system ever offered. The output is 6 volts, peak-to-peak, as compared to 1 volt, or less, provided by most systems. This power has been found necessary not only in systems where long runs of transmission line are used, but also in areas of high signal strength. In strong signal areas it has been found that ghosts are caused by the pick-up of signals through the transmission line at the receiver, or in some cases within the receiver. The super power of this system overcomes this signal, and thus eliminates the ghosting effect.

The Series 2500 represents the culmination of several years of research and engineering. In operation principle, it is similar to the 1500 Series, but incorporates Mixer Units as integrated parts of the Master Chassis. Amplifier Strips are of greater gain, utilizing four tubes in low-band and five tubes in high-band.

Other advanced features include superior rectification by means of tubes in place of selinium rectifiers, and test jack points for fast, easy checking. Automatic attenuation provides positive control of overloading in the amplifier strips.

The Series 2500 provides a far higher signal level throughout than any master antenna system previously available. It is recommended for apartments, stores and community systems where the finest performance is desired. Complete specifications and details are available from your TACOPLEX distributor in the form of engineering bulletins and a fully illustrated catalog.

In addition to the higher output, the Series 2500 TACOPLEX System also incorporates several new type transmission line splitters of exceptionally low loss.

In selecting any master antenna system, one important point must be remembered. The signal captured by the antenna must be sufficient to provide a good picture. The function of the system is to maintain as nearly as possible this same quality signal throughout the entire system. The last receiver should have as good a picture as the one nearest the antenna location. TACOPLEX systems meet this requirement.

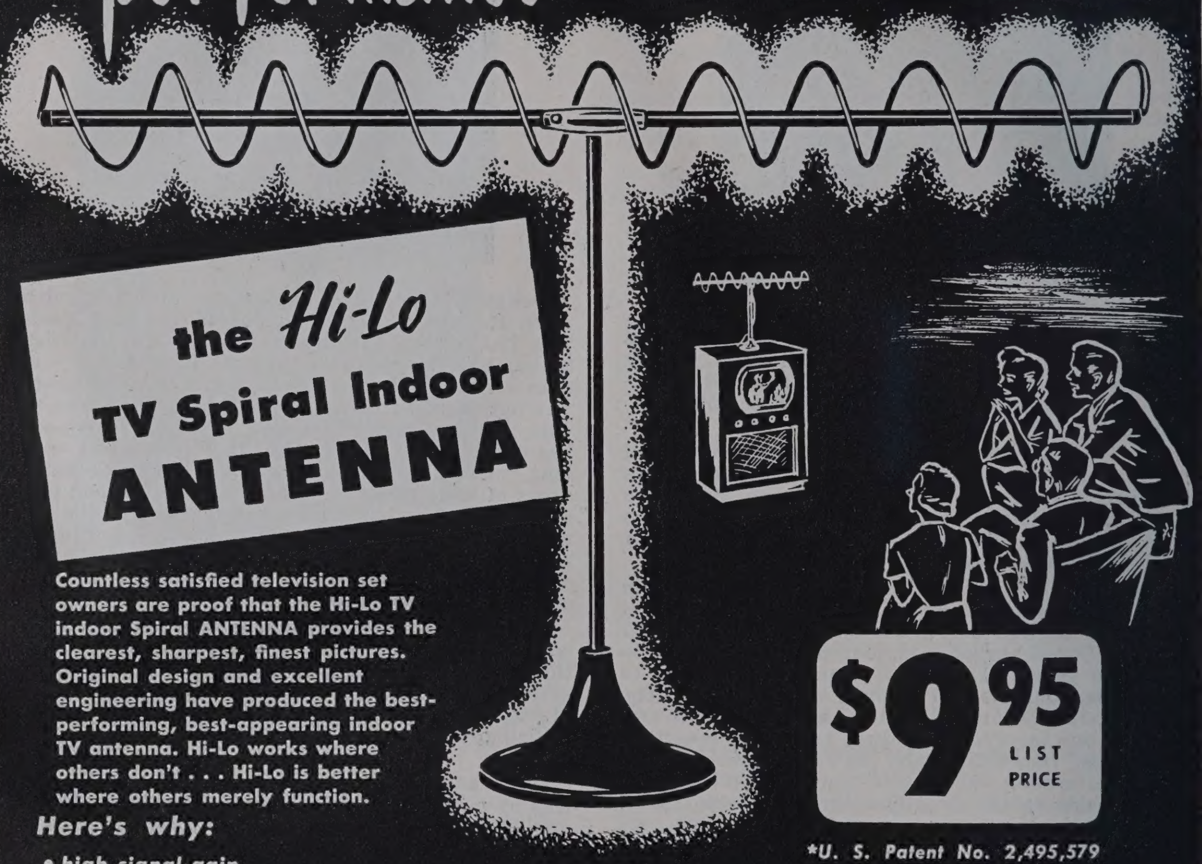
peak performance for indoor TV reception!



the *Hi-Lo* TV Spiral Indoor ANTENNA

Countless satisfied television set owners are proof that the Hi-Lo TV indoor Spiral ANTENNA provides the clearest, sharpest, finest pictures. Original design and excellent engineering have produced the best-performing, best-appearing indoor TV antenna. Hi-Lo works where others don't . . . Hi-Lo is better where others merely function.

Here's why:

- ***high signal gain***
- ***tuned to high and low TV channels***
- ***no switches or rods to adjust***
- ***receives clear picture immediately***
- ***screwdriver only necessary for rapid installation***
- ***gleaming gold appearance***
- ***height 20″ — width 32″***
- ***bakelite base***
- ***aluminum bars***

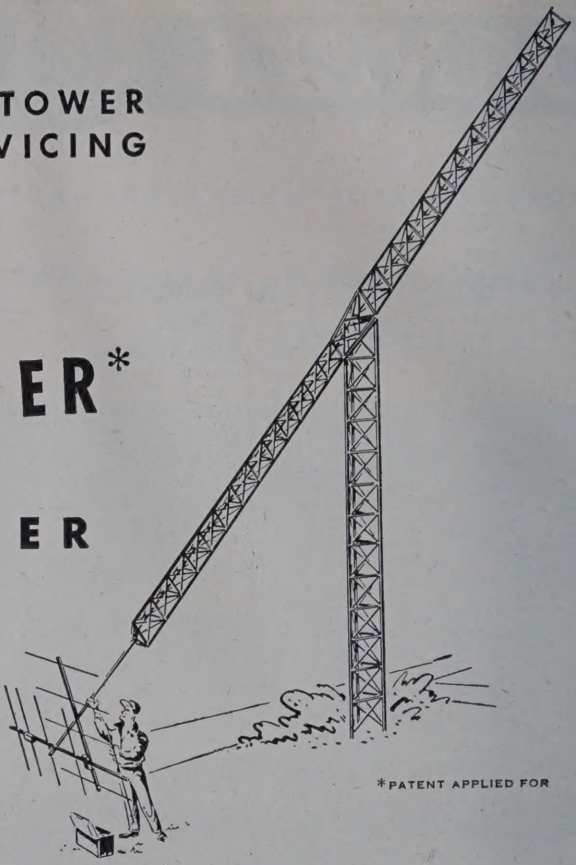
THE EASIEST ANTENNA TOWER IN THE WORLD FOR SERVICING

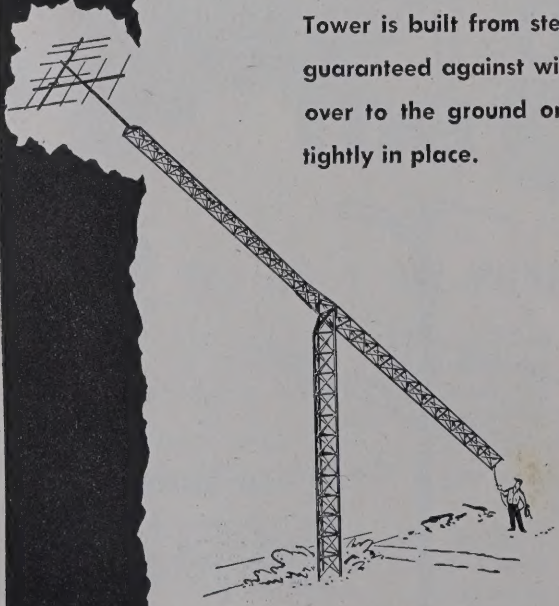
THE TEL-A-RAY SWING-OVER* TOWER



*PATENT APPLIED FOR

TEL-A-RAY ENTERPRISES, INC. TEL-A-RAY TRADE MARK **HENDERSON, KY.**

The most revolutionary item since the birth of television — a tower that actually swings over to the ground for servicing! The Tel-a-Ray Swing-Over Tower is built from steel angles with all-welded construction. It is completely guaranteed against wind and weather damage. Yet, one person can swing it over to the ground or raise it in just three minutes. When erected, it locks tightly in place.



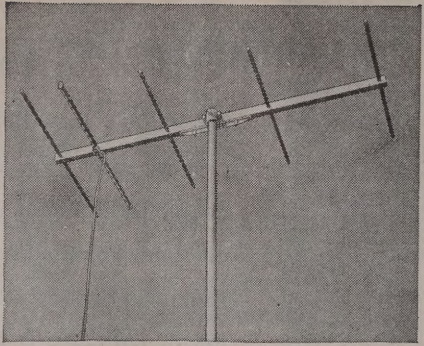
for ground and roofs

Swing-Over Tower Model TT1, for ground installations, is 40 feet high; an additional 10 feet of water pipe is recommended. It can be mounted in concrete with no guy wires, or may be erected with three guy wires only. The Model TT2, for roof tops, is 16 feet high and 8 feet of water pipe is recommended. The TT2 mounts directly to the roof with four guy wires. Both models feature the exclusive Swing-Over design. Individually packed. Shipping weights: TT1 210 lbs.; TT2 50 lbs.

MODEL T

A high-gain array with razor-sharp directivity that gives wonderful reception in fringe areas. Expressly designed to receive good images under most adverse conditions, Tel-a-Ray Model T reduces intrachannel interference to a minimum. Gain is 15 times over dipole, with 12 db power gain, high forward gain, lower angle radiation and a wider band pass. Peaked at factory to single channel for best results. Wind and weather guaranteed, available in 72 or 300 ohm impedances. Individually packed. Shipping weight:

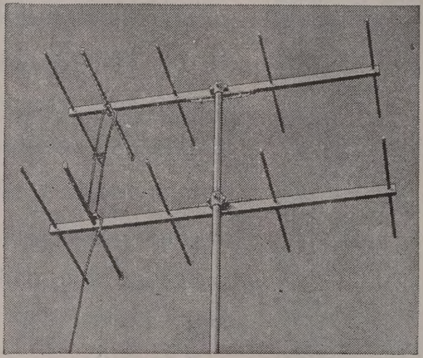
7 lbs. Lo.
5 lbs. Hi.



MODEL TD

For extraordinary sensitivity in picking up and strengthening television signals, the model TD can't be beat. Documented evidence proves the consistently good performance of the TD as much as 200 miles from the station. The same high 7.25 db front-to-back ratio as the Model T, this antenna gives 25 times gain over the dipole and a 14 db power gain! Factory peaked to a single channel, wind and weather guaranteed. 72 or 300 ohm impedances available. Individually packed. Shipping weight:

14 lbs. Lo.
10 lbs. Hi.



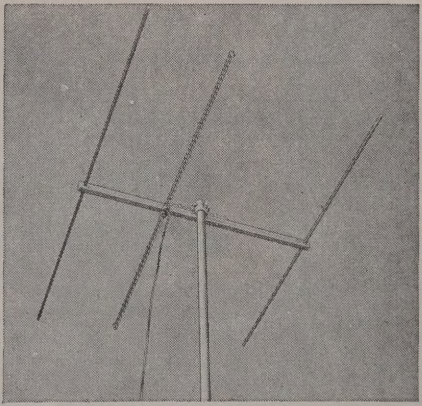
TEL-A-RAY PRODUCTS

"First--Because They Last"

MODEL R

Offering all the quality construction features of the Tel-a-Ray line, the Model R gives perfect results in outer service areas. It is high-gain array designed for reducing snow and improving image definition and clarity. Used with or without the Pre-Amplifier, the Model R will normally provide sufficient signal gain to eliminate the need for a booster. Simple to install and operate. Nine times gain over dipole, 9.5 db power gain, this antenna is also available with 72 to 300 ohm impedances. Wind and weather guaranteed. Individually packed. Shipping weight:

5 lbs. Lo.
4 lbs. Hi.

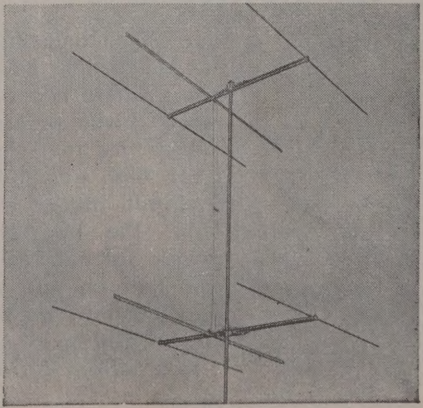


MODEL RD

Here are the advantages of the Model R, expanded into a champion middle-distance performer. Model RD offers a 13 times gain over the dipole and a power gain to 11.5 db. It increases signal strength and improves image definition on the primary service area edges. Quickly and easily installed, completely guaranteed against weather damage. 72 or 300 ohm impedances. Individually packed. Shipping weight:

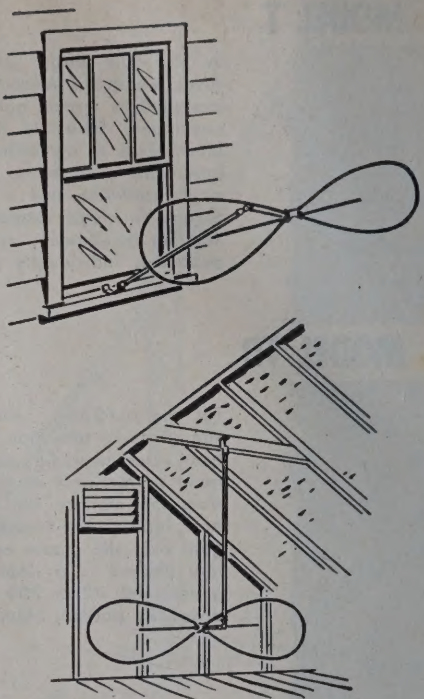
10 lbs. Lo.
8 lbs. Hi.

NOTE: The two bays on Models TD and RD come assembled as a single unit with the stacking bars ready for connection with the lead line.



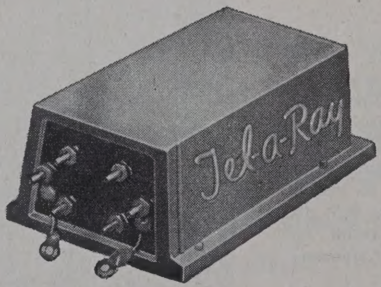
THE BUTTERFLY

Tel-a-Ray's new Butterfly has everything a primary service antenna needs — serves all channels, high gain, low price, is easily erected and completely guaranteed. The performance of the Butterfly — on any TV channel or FM radio is outstanding; it eliminates or reduces ghosts and furnishes a high gain to all signals, giving clear, bright, interference-free reception. The new swivel-positioned Butterfly can be mounted on the roof, outside a window, or hung in the attic. It can be erected in five minutes and is guaranteed to withstand wind and weather damage. Packed 12 to a bundle. Shipping weight 8 lbs.



TEL-A-RAY PRODUCTS

THE PRE-AMPLIFIER



For strong signal amplification without noise, Tel-a-Ray offers their exclusive pre-amplifier — the only low-cost, antenna-mounted pre-amplifier on the market. Used with Tel-a-Ray antennas, it gives up to 300 times gain over dipole, compensates for lead-line loss, makes signals stronger and holds noise to a minimum. A neutralized push-pull triode circuit with an 18 db gain, each Pre-Amp is peaked at the factory for a single channel. Sturdily built and guaranteed against wind or weather damage. Individually packed, 1 to a carton. Carton shipping weight: 2 lbs.

THE BOOSTER

Here is an amazing new Tel-a-Ray product — a Switching Booster. Designed for fringe areas where two or more channels may be received with separate antennas, the Booster will service four channels. It is a low noise level, high gain booster with a neutralized push-pull triode circuit supplying an 18 db gain. The booster controls and supplies power for the Tel-a-Ray antenna system. Channels can be switched by turning one or two knobs on the front of the beautiful streamlined metal case. Individually packed, 1 to a carton. Carton shipping weight: 6 lbs.

New "Wonderod" is a Fiberglas reinforced antennae for mobile radio equipment . . . made by the pioneer manufacturer of Fiberglas fishing rods. Thoroughly tested under extreme conditions, for commercial and private installations. STOCK SIZES READILY AVAILABLE.

NOTE THESE "WONDEROD" ADVANTAGES:

- **Will not corrode — excellent weathering properties**
- **Will not take a set**
- **Light weight, reduces bumping on spring-mount**
- **Exceptionally high flexual strength**
- **High impact strength**
- **Excellent insulation even at high frequencies**
  Reduces hazard of operating under live wires, around sub-stations, etc.

Series 75 Microphone Connectors—Single Contact

Fit almost every microphone. Standard with leading manufacturers for many years. Compact, rugged, neat. Chassis receptacles are integral parts of microphones using single conductor cable. Widely used in amplifiers, transmitters, phonoelectric devices, home recorders and similar equipment. They are also suitable for connecting various units such as PM speakers, headphones, and for theft alarms or wall type coin operated devices, etc.

In the 75 Series, plugs mate with all cable jacks and receptacles. Circuit closing contacts are the same except that they close the circuit when plug is disengaged, eliminating open circuit grid howls.

Locknut Receptacles mount in .385″ holes when grounding to chassis and ½″ holes for ungrounded 2 circuit applications.

Series 80 Cable Connectors are designed for shielded cables; for single and two conductor coaxial cables, microphone cables; for twisted pairs, concentric lines, photo cell leads, patch cords and similar uses. Suitable for connecting model railroad equipment, pin ball games and other small electrical apparatus. Elements are high dielectric black Bakelite. Receptacles mount in 5/8″ chassis holes. Maximum chassis thickness for locknut type receptacles is 11/32″.

Mating families of connectors are listed in horizontal lines.

The most popular connectors are shown in bold face type.

Series 91 Microphone Connectors—3 and 4 Contacts

Extensively used on all types of portable apparatus, these connectors were designed primarily to use with microphones. Some of the advantages of Amphenol Microphone Connectors . . .

- Accidental disconnections are eliminated by a positive screw-type connection.
- Incorrect insertions are impossible because connectors are polarized.
- Pulling and twisting strain on soldered contacts is eliminated because a squeeze-type clamp grips cable securely after assembly.

Chassis receptacles mount in 27/32″ chassis holes. Maximum chassis thickness for chassis receptacle is 1/8″.

Mating families of connectors are listed in horizontal lines.

NEW "AN" CONNECTOR CATALOG

Amphenol also makes a complete range of AN approved connectors for power, signal and control circuits in aircraft and electronic equipment. The new A-2 Catalog is designed as a tool for the use of purchasing agents, engineers and executives in the field of electronics. It can be used effectively by manufacturers of aircraft and accessories, marine craft, instrument manufacturers and designers, laboratories and government procurement agencies. The A-2 catalog will be sent upon receipt of a request on company or government agency letterhead, or may be requested directly from the nearest Amphenol Representative.

Amphenol Coax and Twinax RG Cables

Amphenol Coaxial and Twinax RG Cables are produced to standards surpassing military specifications for electrical performance and mechanical excellence. Conductors are centered 20% closer for Coax and 50% closer for Twinax Cables than required by "AN" specifications.

Most cables utilize the exceptional dielectric properties of polyethylene—low loss, flexibility, mechanical stability. The outer jacket in the majority of approved types is a tough, highly resistant vinyl jacket which is non-hygroscopic and impervious to most acids, alkalies, oils and gasoline. Other types are armored for still greater mechanical protection.

Amphenol has cables that are designed to operate efficiently at temperatures as high as 500° Fahrenheit. Teflon is used as the dielectric because of its low loss, high voltage breakdown and its ability to withstand heat.

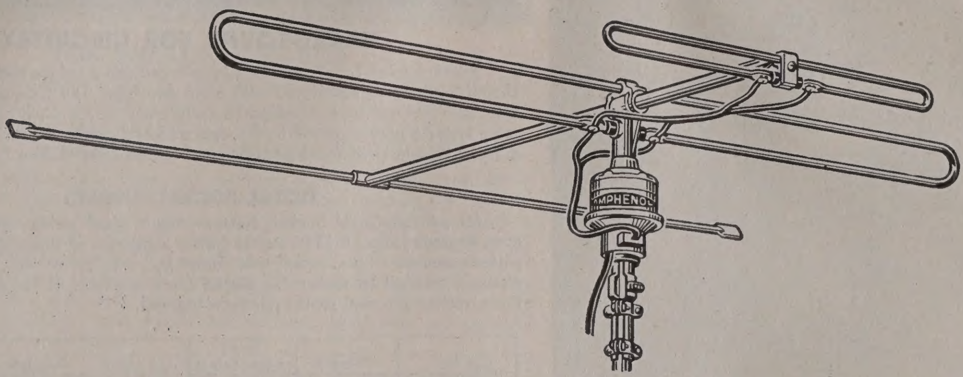
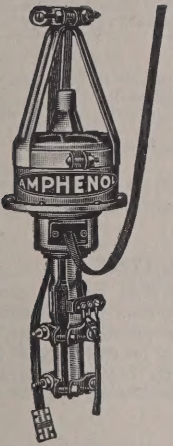
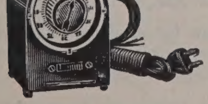
THE NEW AMPHENOL "AUTO-DIAL" ROTATOR





- Mast support included for two bay stacked array!
- Heavy-duty motor!
- In-line mast mounting!
- Cone adapter included—accommodates mast sizes from ¾" to 2"!
- Lifetime lubricated!
- Neoprene sealed against dirt and moisture!



- Attractive "Walnut" finish plastic housing!
- Two 2.5 volt pilot lamps!
- Rubber feet on the base protect furniture!
- White plastic card insert for logging stations!

MODEL No. 509

Designed to rotate in one direction only, the Amphenol "Auto-Dial TV Antenna Rotator utilizes a single directional motor, permitting greater power and higher torque than usually available in reversible motors. The antenna rotates rapidly—only 22 seconds required for a complete revolution. Positive braking action prevents coasting or backlash.

The "Auto-Dial" permits axis or "in-line" mounting of antenna and supporting mast, allowing equal weight distribution on the steel bearings and gears of the rotator. There are no fiber or laminated gears to fail—all gears are steel.

The attractive control unit houses the relay, automatic step gears with nylon insulation, contact breakers, and sturdy transformer that reduces 115 volt A.C. to 24 volt A.C. required by the rotator motor.

The new "Auto-Dial" Rotator for the first time permits accurate antenna field strength measurements because it can always be brought back to exactly the same direction. This is possible because rotation is in steps of 6 degrees, accurately calibrated on the direction indicator. With "Auto-Dial," servicemen are now able to determine whether the antenna is functioning properly, has the best front-to-back ratio and if it is located properly for the best possible picture.

Operating the rotator is as simple as ABC. (A) Turn switch under dial to "On" position; (B) if necessary, refer to log card for dial number indicating desired antenna direction; (C) turn knob until pointer lies over proper number. Then, automatically, the inside knob, which rotates in synchronism with the antenna and which has an arrow—turns to line up with the pointer. This indicates that the antenna is rotating. When the desired direction is reached, rotation stops automatically.

Vector SOCKET-TURRETS

BACKGROUND FOR CIRCUITRY

Vector Socket-Turrets and Plug-In units provide a unique method for mounting circuit components associated with a vacuum tube. The tube socket is joined to a tubular terminal post designed to carry most of the usual circuit elements. In some types a plug is joined to the opposite end of the terminal post to provide a useful Plug-In Unit. Most popular numbers are in bold face type.

OCTAL SOCKET-TURRETS

Mica-Filled Octal Socket, bottom mount steel saddle with 1-5/16" mtg. ctrs., 4 ground lugs, 0.134" saddle holes; wrap-around brass contacts, cadmium plated; requires 1" dia. socket hole. Turret ½" dia., 1/16" wall, Grade XXXP tan phenolic bonded to socket. Six plated brass terminals at far end of turret plus three, six or none near socket per type ordered.

Cat. No.	*Height	Turret Terminals	Description
10-O-9T	2½"	9	Turret Terminals in 2 rings spaced 1⅜"
8-0-9T	2"	9	Turret Terminals in 2 rings spaced 1"
6-0-6T	1½"	6	Turret Terminals in 1 ring only.

*Height measured from chassis to far end of turret.
For variations not usually available from distributors but obtainable at the factory:
Add "A" to No. for large octal socket (1½" mtg. ctrs., 1⅛" hole).
Add "J" to No. for "MFE" socket casting, beryllium contacts, silver plated, tin dipped.
Add "P" to No. for nuts fastened to saddle.
Add "G" to No. for impregnation of turret for moisture and fungus protection.

LOCTAL Socket-Turrets similar to the above are available. These require 1-1/16" hole and 1-5/16" mounting centers. To order these substitute letter "L" for "O" in above catalog numbers.

MINIATURE AND NOVAL TYPES

Mica-Filled Sockets with bottom mounting steel saddles, carrying four ground lugs, ⅛" saddle holes. Brass contacts, cadmium plated. Terminal turret ½" dia., 1/16" wall, Grade XXXP tan phenolic joined to socket with rivet through center of socket and turret. Six terminals at far end of turret plus three, six or none near socket end. 7 Pin Socket requires ⅝" hole, ⅞" mtg. ctrs., 9 Pin Socket requires ¾" hole, 1⅛" mtg. ctrs. Order shield bases, S7 or S9 separately if shields are to be used.

7 PIN Cat. No.	9 PIN Cat: No.	*Hght.	Turret Terminals	Description

6-M-6T	6-N-6T	1½"	6	Turret terminals at far end only
S7	S9			Shield Base (for attaching shield)

*Height measured from chassis to far end of turret.
For variations not usually available from distributors but obtainable at the factory:
Add "J" to No. for "MFE" socket casting, beryllium contacts, silver plated, tin dipped.
Add "P" to No. for 4-40 nuts fastened to saddle.
Add "G" to No. for impregnation of turret for moisture and fungus protection.

NOTE: Letters are printed on all above turrets to indicate terminal positions. A-F inclusive appear on remote end, G-L inclusive on row near socket (H, J, L for 3 terminal rows). "A" & "G" over "I" of socket.

EXPERIMENTAL KIT NO. 1

Comprises an assortment of 20 socket-turrets for octal, loctal, miniature and noval tubes in various sizes and styles. Provides first aid to experimenters and designers in solving a multitude of mounting problems. Samples of both standard and special types are included.

Vector PLUG-IN UNITS

FOR UNITIZED CIRCUITS

Amplifiers, counters, oscillators and the like can be readily assembled completely on Plug-Ins, permitting quick changes of circuits. Making a Plug-In unit involves little more than soldering in a few capacitors and resistors.

ECONOMICAL AND CONVENIENT

Plugs are standard mica-filled, ring mounted octal style with 8 prongs as standard. (9 or 11 prong plugs also available—see below). Sockets are standard mica-filled phenolic in octal, 7 Pin miniature or 9 Pin noval as ordered. Contacts are cadmium plated brass. Terminal turrets are Grade XXXP phenolic tubing 1/2" O.D. with 1/16" wall, carrying 12 plated brass terminals. Aluminum covers may be quickly detached by removing screws at base, making inside completely accessible. Miniature and noval types carry military type tube shield base. Main tube shield not furnished. Types in bold face are most widely used and generally preferred for distributor stock.

SPECIAL FEATURES. Variations obtainable at the factory:
Add "H" to No. for 9 prong octal type plug.
Add "K" to No. for 11 prong octal style plug.
Add "J" to No. for "MFE" socket casting, beryllium contacts, silver plated, tin dipped.
Add "G" to No. for impregnation of turret for moisture and fungus protection.
Add "P" to No. for perforation of covers for ventilation.
Anodized finishes, natural or in color to order.
Studs to lock 2" sq. units firmly in sockets are available.

NOTE: Letters are printed on turrets to indicate terminal positions. A-F inclusive appear on 6 terminals at plug end, G-L inclusive on socket end, "A" & "G" in line with "I" of socket and "I" of plug. Key of 8 prong plug points toward corner of can but key of 9 & 11 prong plug points to side of can.

EXPERIMENTAL PLUG-IN KIT NO. 2

Comprises an assortment of 7 plug in units in several sizes, with octal, miniature and noval sockets, 8 and 11 prong plugs. Many combinations can be quickly assembled.

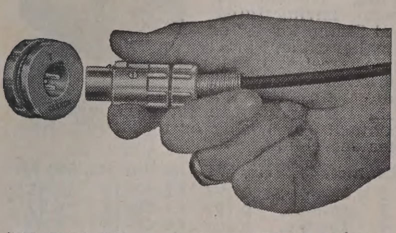
TYPE XL FITTINGS

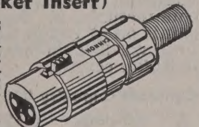


"XL-3-14N" Receptacle and "XL-3-11" Plug in engaging position. Compare small size of plug with hand.

The Cannon Electric Type "XL" Connector combines various features found in other Cannon types into a small fitting comparable only in size to the Type "X" for low level sound transmission circuits. Among the leading features are the following: (1) convenient latchlock device to hold connector tight. (2) lightweight. (3) polarizing means (4) compression gland with relief spring or integral clamp, if desired. (5) streamlined design. (6) tapped metal for insert retaining screw. (7) provision for special grounding contact and grounding to shell. Contacts are 15-amp. for No. 14 B&S stranded wire in 3 contact insert; 10-amp. in 4 contact insert. Shell is zinc or steel, with various finishes available, bright nickle being standard. Satin-chrome finish available on steel shells. Flashover Voltage 1400-1600v.

ZINC SHELL TYPES

TYPE "XL-11" STRAIGHT CORD PLUG (Socket Insert)



Type XL-3-11 is equipped with latch lock device and has raised polarizing boss. No. 1 contact engages before Nos. 2 and 3, and may be used for grounding purposes, if desired. $\frac{9}{32}$ cable accommodation. CANNON ELECTRIC COMPANY

TYPE P FITTINGS

CANNON "TYPE P" FITTINGS. Universally used in sound and allied applications. "Type P" Fittings include a size and type for every requirement, with a high standard of quality. All 90° Plugs have split-shell construction for quick, easy access for wiring or inspection. Splash-proof but not weather-proof. Plug and receptacle dust caps are available. Laboratory tests show an average voltage-drop of not more than 10 millivolts, with current flowing at the rated capacity. Insulating material is black phenolic which has a 0.7% absorption in 24 hours of immersion in water and a dielectric strength of 550 volts per mil at 60 cycles. Two to 6 contact inserts accommodate No. 10 B&S stranded wire; 8 contact insert No. 14 wire.

New shell designs of the P-CG-11S and P-CG-12S, cord plugs, replace both old type shells of zinc and steel, and such improvements as shorter length, new rubber bushing, improved latch and spring, integral clamp. Shell material is steel, integral clamp zinc.

"500" SERIES PLUGS AND SOCKETS

For Complete Listing of 500 SERIES, Write for No. 500 Catalog

Designed for 5,000 volts and 25 amperes per contact. Circuit characteristics, however, may alter this rating one way or the other.

Long leakage path from terminal to terminal, and terminal to ground. Contacts are brass and phosphor bronze, silver plated. Metal parts of caps and brackets are steel, parkerized (rust-proofed). Plug and socket blocks are interchangeable in caps and brackets.

All sizes are polarized in a manner to prevent a smaller plug being inserted in a larger socket. Thus different sizes may be used on one installation without danger of making wrong connections.

Extreme care has been taken to make terminal connections under cap very accessible both for original wiring and subsequent inspection. The cap is insulated with canvas bakelite. Plug prong cross section $\frac{5}{16}$" x $\frac{3}{32}$".

IMPORTANT: For safety with high voltages DEEP BRACKETS should always be used on one plug or socket, when the other plug or socket has a CAP. SHALLOW BRACKETS are for use only in connecting two units, each unit having plug or socket with SHALLOW BRACKET.

Cable entrance: Because of the great variation in type and size of cables, we have considered it best not to supply cable clamps of any kind. The cap end is made to accommodate standard BX clamps which may be obtained at any electrical jobbing house. The cap end will be furnished with round hole from ½" diameter and 1¼" diameter in steps of ⅛", if the size required is given on order. If no size is given, plain cap end with center punch locating center will be shipped.

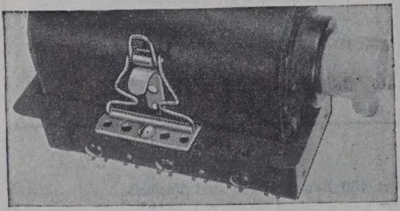
LOCKS FOR 500 SERIES PLUGS AND SOCKETS



Locks shown above are used in connection with any DEEP BRACKET and cap combination.

The locks securely hold the units together, but they can be released instantly.

The mounting plates are made to fit all DEEP BRACKETS, and are fastened by the same screws or rivets that hold the deep brackets to the panel. Can not be used on shallow brackets. Sold in pairs only.

SERIES 101 SOCKETS

The No. 101 Series Sockets are furnished in three types as shown below. Base is of Brass, Nickel Plated with Chrome Flash. Brass contact is Silver Plated. Insulation of low loss natural color XXX Bakelite. Meets Navy Specifications. The S-101-D is similar to the S-101 except that the Bakelite is recessed in the base. S-101-D Mod. is the same as S-101-D except that two sides of the base are milled as shown. Mounting Holes No. 101—No. 41 drill on $\frac{11}{16}$'' centers. Mounting holes No. 101-D and 101-D Mod. No. 30 drill on $\frac{13}{16}$'' centers.

SERIES 201

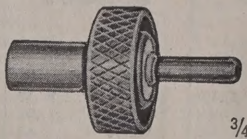
PLUGS

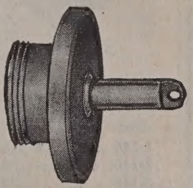
The No. 201 Series Plugs are of the same design as the No. 101 but are of heavier stock and larger. Made in one size only with 3/8'' ferrule. All metal parts are of Brass, same finish as No. 101 Series and Wax Impregnated Ceramic insulation. Overall length 1$\frac{9}{16}$''. Prong diameter $\frac{5}{32}$''. Fits only the 201 Socket.

SOCKETS

The 201 Socket is similar to the S-101-D except larger. Brass base is nickel plated with Chrome Flash. Brass contact is Silver Plated. Insulation is of low loss natural color XXX Bakelite. Both Plug and Socket meet Navy Specifications.

Mounting holes—No. 30 drill on 1'' centers.





3/4''—27 thread.

PLUGS SOCKETS

The 202 Series Plugs and Sockets are made in two contacts only. Metal parts are of Brass with burnished Cadmium Plate. Insulation is of Molded Bakelite. Phosphor Bronze "Knife Switch" type Socket Contacts engage both sides of flat Plug Contacts—double contact area. Formed Fibre linings in caps. Polarized. Knurled nut has 3/4''—27 thread.

1400 SERIES PLUGS AND SOCKETS

This series of "disconnect" plugs and sockets has the distinct advantage of low cost for a separate unit handling many circuits. Due to exposed metal parts, it is recommended for use when the complete unit is within a housing.

Reduces costs of servicing units. Advantageous in shipping when it is desirable to pack units separately. Polarized—assures correct coupling. Spring temper brass sockets assure perfect contact. Standard units are listed below from 5 to 16 contacts. However we can supply units having as many as 30 or more contacts.

On No. 1420 or larger we recommend the plug be divided into two or more units, as a single long plug is not mechanically strong. The socket will be made in one assembly.

For units with more than 16 contacts, add 7c to the No. 1416 price for each additional contact.

BARRIER TYPE TERMINAL STRIPS

Increased insulation is provided by having Barriers placed between each Terminal. These Barriers follow around the edge of the Strips and terminate at the base. They not only make a long leakage path but prevent direct shorts from frayed wires at the terminals. Mounting holes are at the ends as illustrated. The base is molded Bakelite. The Terminals and Binder Screws are of brass, nickel plated. **Marker Strips** may be ordered and imprinted to supply terminal designations. These Marker Strips mount beneath Terminal Strips and also afford insulation from metal mounting surface. **See page 21 for imprinting charges.** See pages 24 and 25 for dimensions.

For Right Angle Mounting

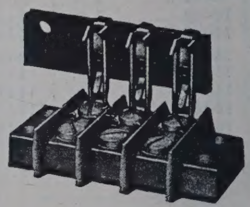

Illustration at right shows a No. 3-162 A-R Fanning Strip connected to a No. 3-142 Barrier Strip.

Jones Fanning Strip Terminals are of .032" Brass, Cadmium Plated. The Bakelite strips are furnished with a hole in either the right or left end for fastening the cable with a cable clamp or lacing twine. Simplifies cable or harness wiring, assuring positive connections. Makes replacement of units an easy matter and assures correct connections after servicing.

In many instances where there is not sufficient room for the standard Fanning Strips we can supply those listed formed for right angle mounting permitting use when Barrier mounts flush with the side of the chassis. Specify Series 160A, 161A and 162A instead of 160, 161 and 162. Prices slightly higher.

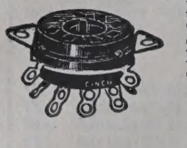
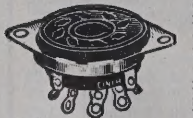
MOLDED OCTAL 1-5/16" MOUNTING CENTERS



Molded from high dielectric black bakelite or mica-filled low loss bakelite. Solder coated brass contacts and sturdy steel press-on type saddle with 4 ground lugs. Mounts in 1" chassis hole.

No.	Description	List Price
8AB	**Black**	**Each $ .15**
8AM	**Mica-Filled**	**Each .22**

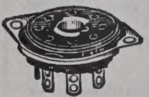
MOLDED OCTAL 1½" MOUNTING CENTERS



Same as 8A series molded octal above except has clinch-on type saddle with 4 ground lugs and mounts in 1⅛" chassis hole. Available in black, mica - filled bakelite, or ceramic.

No.	Description	List Price
8EB	**Black**	**Each $ .15**
8EM	**Mica-Filled**	**Each .22**
8EC	**Ceramic**	**Each .51**

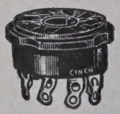
MOLDED LOKTAL

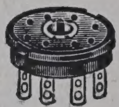


Steel mounting saddle with solder coated brass contacts and center guide clip with locking spring. 1$\frac{5}{16}$" mounting centers. Molded from high dielectric black bakelite or mica-filled low loss bakelite. Mounts in 1" chassis hole.

No.	Description	List Price
8LB	**Black**	**Each $ .22**
8LM	**Mica-Filled**	**Each .29**

CHASSIS CLINCH OCTAL AND LOKTAL

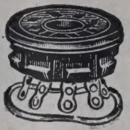




Designed to save valuable chassis space. Mounted in specially punched 1" chassis holes, and are rigidly fastened by lugs sheared from the chassis. No mounting plate or ring required. Molded from high dielectric black bakelite. Solder coated brass contacts and center guide clip.

No.	Description	List Price
8CC	**Octal**	**Each $ .13**
8CCL	**Loktal**	**Each .18**

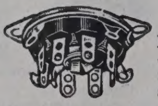
RING MOUNT OCTAL



Molded from high dielectric black bakelite. Solder coated brass contacts. Used extensively on test equipment, public address amplifiers and on other apparatus where sockets are exposed. Molded keyway in side engages key in chassis hole, preventing socket from turning. Mounts in 1$\frac{11}{64}$" chassis hole. Crimped retainer ring is furnished with these sockets.

No.	Description	List Price
8R1	**For $\frac{1}{16}$" thick chassis**	**Each $ .19**
8R2	**For ⅛" thick chassis**	**Each .19**

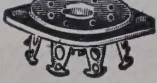
MOLDED LOKTAL



Has same characteristics as molded loktal shown in left column, except saddle has 4 ground lugs.

No.	Description	List Price
8LB1	**Black**	**Each $ .22**
8LM1	**Mica-Filled**	**Each .29**

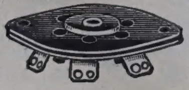
WAFER LOKTAL 1-5/16" MOUNTING CENTERS



Laminated bakelite socket. Sturdy and positive grip solder coated contacts and center guide clip with locking spring. Mounts in 1$\frac{1}{16}$" chassis hole. Has two .136 diameter mounting holes.

No.	List Price
8LWS	**Each $ .17**

GLASS TUBE SOCKETS



Laminated bakelite sockets with solder coated positive grip brass contacts. 1½" mounting centers. .140 diameter mounting holes. Designed to fit four, five and seven prong tubes.

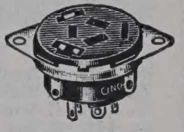
CINCH CAPACITOR "PLUG-IN" SOCKETS

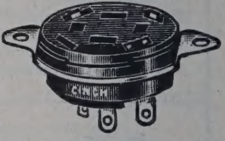
Motion picture, telephone, airborne radio, broadcasting equipment, electric organs, and other electrical equipment need instant replacement when failures in electronic circuits occur at the capacitor connections. Cinch "Know How" has solved this problem.



SMALL

Designed for use with Mallory and Magnavox 1" FP type condensers. Molded from high dielectric black bakelite. Sturdy steel mounting saddle has 4 ground lugs. 1½" mounting centers. 3 recessed center contacts for extended prongs of condenser and two outer contacts flush with surface for short prongs of condenser. All contacts are solder coated for fast, easy soldering.

No.	List Price
2C5	**Each $ .55**



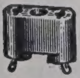
LARGE

Designed for use with Mallory and Magnavox 1⅜" FP type condensers. Molded from high dielectric black bakelite. Sturdy steel saddle has 1$\frac{27}{32}$" mounting centers. Four recessed center contacts for extended prongs of condenser and three outer contacts flush with surface for short prongs of condenser. All contacts are solder coated.

No.	List Price
2C7	**Each $ .68**

CRYSTAL SOCKETS

2 PRONG 31/64" CENTERS



Molded from high dielectric black bakelite or mica-filled low loss bakelite. Silver plated beryllium copper contacts on $\frac{31}{64}$" centers. .120" diameter recessed mounting hole. Socket body is $\frac{25}{32}$" long, $\frac{5}{16}$" thick, and $\frac{35}{64}$" high. For use with FT243 type crystal.

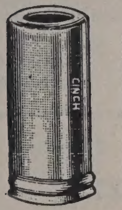
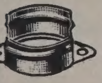
TUBE SHIELD AND BASE

Snap-On Type





Shield fits over and outside of retaining spring. Indentation on shield locks into ridge on base. Spring steel shield is 1 53/64" long. Base is made of hardened carbon steel supplying adequate spring retentivity on shield. Base has ⅞" mounting centers with mounting holes that coincide with those for miniature 7 pin sockets as established by R.M.A. standards. For use with saddle type and wafer sockets with ⅞" mounting centers illustrated on this page.

No.	List Price
7S1	**Each $ .18**

TUBE SHIELDS

"J" Slot Type

Durable steel shields complete with tube securing spring. "J" slot feature designed to fit securely with Cinch shield base type sockets, such as 7X series shown in next column. Also fit 7SB type shield bases shown below. Available in three lengths:

WAFER TYPE with 1" & 1-5/16" Mtg. Centers

Newly developed 7 pin miniatures to replace octal sockets for auto radios, television, and other sets. Newly designed contacts will hold tube firmly in place without using a tube shield despite constant vibration. Same pin circle as standard 7 pin miniature sockets with ⅞" mounting centers for all standard 7 pin miniature tubes. Available with or without center guide pin and ground strap.

9 PIN MINIATURE SOCKETS AND SHIELDS

MOLDED — SADDLE TYPE

Bottom Mount

Molded from high dielectric black bakelite or mica-filled low loss bakelite. Designed for mounting through bottom of chassis in ¾" diameter hole. 1⅛" mounting centers with .093 diameter mounting holes. Solder coated brass contacts and center shield.

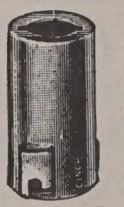
No.	Description	List Price
9EB	**Black**	**Each $ .36**
9EM	**Mica-Filled Bakelite**	**Each .42**

SHIELD BASE

Durable steel shield base designed for use with shields illustrated to right. 1⅛" mounting centers. May be used with any 9 pin wafer or saddle type sockets shown in right column.

No.	List Price
9SB	**Each $ .24**

TUBE SHIELDS



Made from durable steel. Complete with tube securing spring. "J" slot feature designed to fit securely with Cinch 9X series shield base type sockets illustrated to the right. Will also fit No. 9SB shield base shown at left. Available in three lengths.

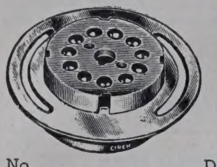
CINCH SOCKETS ARE STANDARD FOR TELEVISION!

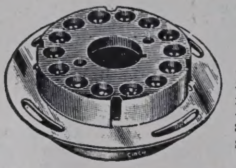
Television is growing by leaps and bounds. To meet the increasing demand Cinch "Know How" has engineered and perfected Magnal, Duodecal, and Diheptal sockets for cathode ray and television tubes. Other television products illustrated on this page include second anode connectors and Corona insulating shields.



MAGNAL—11 PRONG

Molded from mica-filled low loss bakelite. Socket is $1\frac{23}{32}$" wide and $1\frac{9}{64}$" high. Full floating silver plated beryllium copper contacts designed to insure easy insertion of tubes and yet provided excellent electrical connections. For use with 5BP1 and 2AP1 type cathode ray tubes.

No.	Description	List Price
3M11	**Mica Socket**	**Each $6.60**
3R11	**Steel Mounting Ring**	**Each .46**



DIHEPTAL 14 PRONG

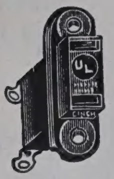
Molded from high dielectric black bakelite or mica-filled low loss bakelite. $2\frac{7}{32}$" wide and 1⅛" high. Possesses same features as Cinch Magnal socket shown above.

No.	Description	List Price
3B14	**Black Socket**	**Each $2.20**
3M14	**Mica Socket**	**Each 2.75**
3R14	**Steel Mounting Ring**	**Each .46**

CORONA SHIELDS

Specifically designed for Television and high voltage wiring. These cadmium plated brass shields will provide excellent protection at proper positions in electrical connections. Outside diameter .470. Hole diameter .136. Thickness .172.

No.	List Price
3C1	**Per C $3.03**

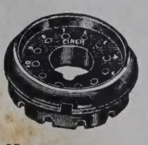


110-250 VOLT SOCKET

(Underwriters Listed)

When space is at a premium use this 110-250 volt 2 prong socket. Rated at 15 Amp., 110 V. or 10 Amp., 250 V. Molded from high dielectric black bakelite. Solder coated brass contacts on ½" centers designed to accept any 2 prong standard electric plug. Mounts in $\frac{25}{64}$" x $\frac{25}{32}$" hole. .144 diameter mounting holes on 1⅛" centers. Ideal for radio chassis and many other applications.

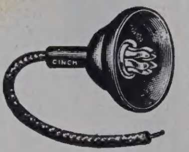
No.	List Price
2R2	**Each $ .22**



DUODECAL—12 PRONG

No larger in diameter than the tube base and only slightly longer than the tube pin. A new feature incorporates wire strain relief as an integral part of the contact. Molded from high dielectric black bakelite. For use with 10BP4, 2BP1, 5TP4, etc., type tubes.

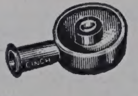
No.	List Price
3B12	**Each $ .88**



SECOND ANODE CONNECTORS

For television tubes—Silver plated snap button type plug well insulated by 1½" diameter rubber protective cap. Snaps into opening on side of tube. Available in three lengths wire leads.

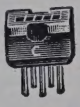
No.	Description	List Price
3A2	**12" Wire Lead**	**Each $ .99**
3A3	**15" Wire Lead**	**Each 1.16**
3A4	**18" Wire Lead**	**Each 1.38**



SECOND ANODE CONNECTOR

For diheptal based tubes. Cadmium plated brass contact surrounded by rubber insulator ¾" wide and $1\frac{3}{16}$" long. Snaps over .096 diameter prong on side of diheptal tubes.

No.	List Price
3A1	**Each $ .83**



SUB-MINIATURE HEARING AID SOCKETS

Used extensively for hearing aids, radio controlled model airplanes and numerous other applications which require sub-miniature tubes. Molded from mica-filled low loss bakelite with silver plated beryllium copper contacts. For Raytheon type CK series sub-miniature tubes. Available with 5, 6, or 7 contacts. Four prong tubes use No. 2H5 five prong socket.

ANTENNA PLUG

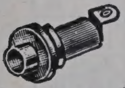
Motorola type. Nickel plated ⅛" tube pin extends $\frac{17}{32}$" from cadmium plated split brass shall whose 8 cutting edges provide positive grounded connection when inserted into a Cinch No. 81C or 81F connector.

No.	List Price
13B	**Each $ .13**

INSULATED PIN PLUG

Nickel plated ⅛" brass tube pin $\frac{9}{16}$" long, assembled to $\frac{13}{32}$" long fibre insulator. May be used with Cinch No. 81A and 81B type phono jacks or with No. 49 series contact strips illustrated in right column.

No.	List Price
13C	**Each $ .10**



STAND-OFF TERMINALS

Insulated terminals for television and other high voltage electronic equipment. Provides excellent insulation for passing high voltages with through chassis. Molded from mica-filled low loss bakelite. Available in two lengths: $\frac{9}{32}$" or $\frac{13}{32}$". Diameter of cylinder is .110. Mounts in $\frac{5}{32}$" dia. hole. Actual size illustration of No. 16L.

American Beauty

ELECTRIC SOLDERING IRONS

These electric soldering irons embody features of design and construction that specialized experience dating from 1894 in the exclusive manufacture of electric heating appliances has demonstrated to be desirable for efficient and lasting service. Hundreds of thousands are in use throughout the world in a wide variety of manufacturing plants; in service, maintenance and repair shops and in telephone, telegraph, radio and TV stations. Because of their proven dependability, durability and efficiency they are preferred by those who measure the value of a tool or mechanical device by the service rendered.

No. 3128—For servicing TV, electronic and radio equipment and similar light work.

No. 3138—For TV, electronic and radio production; also for telephone, telegraph and similar work.

No. 3158—For the same purposes as the No. 3138 but for work requiring an iron of greater capacity.

No. 3178—For use on still heavier work than that for which the Nos. 3138 and 3158 irons are adapted.

No. 3198—For use on very heavy soldering operations of all kinds.

Made in standard voltages and for 32 volts. No. 3138 also made for 6, 12, 24 and 55 volts. All sizes can be equipped with 3-conductor cord, one wire grounded, at slight additional charge. Separate heat-insulating stand supplied with each iron.

TERMINAL CONDUCTOR ASSEMBLY

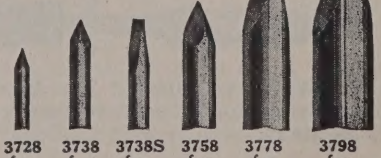
This illustration shows the Terminal Connector Assembly used in all American Beauty electric soldering irons. It is designed for use with either 2- or 3-conductor standard heater cord or rubber-covered cord—Types SJ, HSJ, etc.

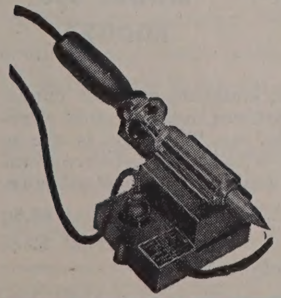
This assembly permits easy grounding for safety by a third conductor—particularly desirable when irons are used on 220-volt circuits or on metal benches accommodating groups of operators.

The cord is held firmly in place by a strain-clamp.

American Beauty COPPER TIPS

American Beauty Copper Tips are made from commercially pure, drawn bar copper rod and are heavily nickeled to resist corrosion and oxidation. Standard shaped tips with which various models are equipped are shown in illustration but pyramidal, instead of chisel type, and vice versa can be supplied when so specified without additional charge. For No. 3138 a special long, semi-chisel shaped tip (No. 3738-S) can be supplied for telephone, switchboard, television and radio work.





American Beauty TEMPERATURE REGULATING STAND

For use on (AC) Alternating Current Only

This is a thermostatically controlled device for the regulation of the temperature of an Electric Soldering Iron while at rest. Through an adjustment on bottom of stand the thermostat may be set for maintenance of any desired heat—from very low, or warm, to full working temperature. It is designed for use with Electric Soldering Irons up to 660 watts capacity and on circuits up to 240 volts.

MIDGET SOLDERING IRONS

FOR MANUFACTURING AND SERVICE OF RADIO AND ELECTRONIC EQUIPMENT

APPLICATION

This 8-inch, 1¾-ounce featherweight iron for close-quarter soldering with pin-point precision is used where conventional irons might cause damage . . . be clumsy to handle . . . be more expensive to operate. The Midget literally goes places with greater efficiency and less power . . . with no sacrifice in heat or speed. With its fingertip operation, this iron will help make an expert out of any solderer in a short time.

The Midget has Ironclad copper tips either ⅛- or 3/16-inch diameter, as desired.

THIS MIDGET DOES A BIG JOB IN

- Boosting Production Rates
- Increasing Operator Efficiency
- Cutting Down Employee Fatigue
- Saving on Repair and Maintenance
- Reducing Rejects
- Manufacturing and Repairing:
    - Radios and other electronic equipment
    - Meters
    - Instruments
    - Jewelry
    - Appliances

. . . and many other products
requiring precision soldering

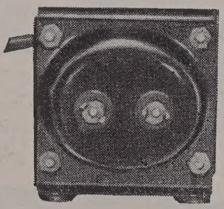
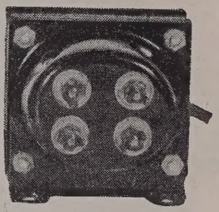
SPECIAL TRANSFORMERS (OPTIONAL) FOR G-E MIDGET SOLDERING IRONS



Single-tap, Cat. No. 6A362



Four-tap, Cat. No. 6A364

Specially designed 115-volt transformers are available as optional equipment in two types:

1. Single-tap 115/6 volts—for use where only one soldering heat is required
2. Four-tap 115/6.3/6/5.7/5.4 volts — gives wide range of heats (from 20 to 30 watts) for close temperature control of tips

Transformers are small, lightweight, but sturdy. Their 6-foot extension cords can be plugged in any 115-volt a-c circuit.

THE MIDGET OFFERS MAJOR ADVANTAGES

Low-cost soldering—Solders more efficiently, using only approximately one-fourth wattage normally used.

Fingertip operation—Only 8 inches long, weighs but 1¾ ounces. Styled for fingertip grip.

Quick, continuous heat—Famous G-E Calrod* heater built into Ironclad copper tip for rapid heat transfer.

Easy renewal—Ironclad tip and heater can be replaced as a unit merely by unscrewing from handle.

Long life, low maintenance—Low voltage permits use of heavy, long-lasting resistant wire. Reduced servicing with long-lasting Ironclad copper tip.

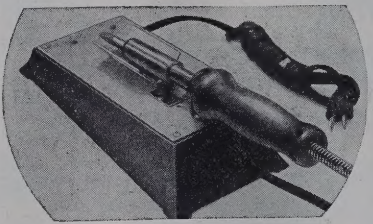
FOR FASTER SOLDERING . . . LONGER IRON LIFE

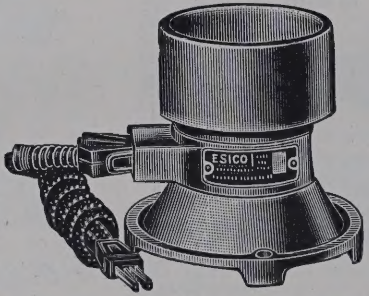
MAINTAINS DESIRED IRON TEMPERATURE BETWEEN JOBS • PREVENTS OVERHEATING SAVES ELECTRIC CURRENT • ADJUSTABLE TO ANY SIZE IRON SAVES TIME • NO LONG WARM-UP PERIOD



A practical, time and money saving device which accurately regulates and maintains soldering iron temperature between jobs. Lengthens iron life by reducing tip oxidation and amalgamation of tip with solder which increases with over-heating.

When placed on stand, iron rests in a copper cradle which conducts heat of iron and actuates a bimetal to open or close a switch. Temperature is easily regulated by an adjusting slide at bottom of stand. As iron is removed from stand, full current is instantly supplied. Stem rest adjustable to accommodate various lengths of irons. Stand is a heavy gray iron casting—stays firmly fixed without being fastened.

• SOLDERING POTS



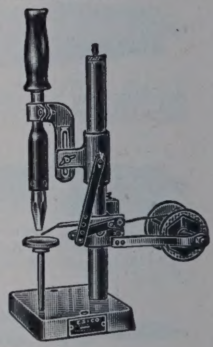
Ruggedly constructed, cast iron pots for production work. Elements are easily replaced even while pots are hot.

	Net Price
Cat. No. 12—1 1/2" dia. Cap. 3/4 lbs.	$ 4.95
Cat. No. 36—2 1/2" dia. Cap. 2 1/4 lbs.	6.05
Cat. No. 60—3 1/2" dia. Cap. 3 3/4 lbs.	7.15

• SPOT SOLDERING MACHINE

Model "F" is a treadle operated machine which feeds solder forward as the iron moves away from the work. Suitable for spot soldering where a mechanical connection has first been made. Net price $16.50

Model "N" is a treadle operated machine for the advancement of the iron, but without a solder feed attachment. Net price........................ $8.25



ESICO ELECTRIC GLUE POT

• GLUE POTS

The catalogue No. 700 Glue Pot is of two quart capacity. It is the water jacket type and has a gasket sealed element and thermostat completely protected from moisture. Thermostat is normally set at 150 degrees for use with glue, but can be set at various temperatures for use with wax, etc. Net price $20.35

Now a Single Heating Unit Does the Work of THREE!

Now — more versatility with Ungar ELKALOY TIPLETS plus two thread-in heating units: No. 535 for general soldering (23½ watts) and the new No. 1235 (37½ watts) for production-line industrial soldering where more heat is required. Now—Ungar Elkaloy Tiplets make the famed Ungar Soldering Pencil 3 times more efficient. They save (1) Time (2) Money (3) Strategic Copper. Made of Elkaloy "A" for perfect tinning, stepped-up heat conductivity, and extra resistance to pitting and corrosion, each of the three tips threads into either of the heating units. In turn the heating unit fits the famed light-as-a-feather Ungar Handle. YOU CONTINUE TO USE THE HEATING ELEMENT WITH TIP AFTER TIP!

Check These Improvements
in the Famous No. 776

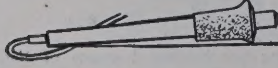
Ungar Handle

Now Better Than Ever!

Check these features: Extra length brass shell firmly engages all threads, keeps heating unit tight; Spring action rivet assures positive contact; Extra flexible cord protected with molded Neoprene sleeve; Cooler handle of durable molded plastic, perfectly balanced; Form-fit cork grip; Ceramic insulation for double safety; Underwriters' listed (110-120V. 37½ watts).
No. 776 Handle & Cord
Set only **$1.15** ea.

NEW PROTECTIVE
RUBBER SLEEVE
fits over cord and prevents wear.

NEW FORM-FITTED CORK BUSHING
keeps handle tilted at 10-degree angle — eliminates need for extra handle-rest — keeps hot tip pointed up, away from bench surface.



UNGAR ELKALOY TIPLETS SCORE THESE ADVANTAGES:

CONSERVES STRATEGIC MATERIALS. By substituting Elkaloy "A" for the tips, and iron for the heating units, we have helped solve the copper problem — and can assure you immediate delivery of heating units and Elkaloy Tiplets IN ANY QUANTITY. (Note: Nos. 537S, and 537C and 538 Tips have been discontinued until further notice.)

SAVES YOU MONEY because you no longer discard the heating unit when the tip has worn down. Long-lived heating units can be used over and over again.

EASIER TINNING. Elkaloy "A" requires no special tinning procedure. Does not oxidize as rapidly as copper. No flux or paste ever required. Eliminates unnecessary and costly maintenance.

EXCELLENT HEAT CONDUCTIVITY. Elkaloy "A" absorbs heat from heating unit — delivers it directly to point of contact.

INTERCHANGE TIPS EASILY AND QUICKLY. When Elkaloy Tiplet is worn down, simply unthread used tip with pliers and screw in new tip. Difference in co-efficient of expansion assures maximum heat conductivity — eliminates corrosion and gumming.

PETITE
SOLDERING IRON

in the home . . .

It's convenient. Because it cools as fast as it heats, you can put it in a kitchen drawer the minute you finish the job. It is always on hand for that quick repair job on a lamp, on jewelry, on utensils.

It eliminates fire hazards. You don't need a special rack to hold the iron while your hands are busy. Only the tip is hot, and the plastic handle keeps the tip from burning anything if you place the iron on carpet or table top.

It saves time. You don't need to wait ten or fifteen minutes for the iron to warm up for a job. Five seconds after you pick it up your *Quick-Heat* is ready to work.

in the shop . . .

It's a money-maker. Your service man can take his *Quick-Heat* with him on the job, plug it in anywhere, and get to work on radio or electrical appliance immediately . . . . without danger of damage to a customer's furniture or carpets.

It speeds the work. A special model for shop use contains a stand-by heating arrangement . . . a resistor cord that maintains partial heat between jobs. As soon as you press the trigger, the tip is at working heat level. For all-day use in a shop, the *Quick-Heat* offers the user instant service the very second he wants it.

in the factory

An extra bonus. Besides all the advantages that *Quick-Heat* provides for other users, it makes employees on assembly lines more comfortable and more efficient by reducing heat radiation drastically. Moreover, in regular assembly-line use it can cut your electricity bill by as much as 85 percent.

MULTICORE SALES CORPORATION • NEW YORK 13, N. Y.

Multicore
World's Finest
3 CORE SOLDER

THE ONLY SOLDER MADE WITH NON-CORROSIVE, EXTRA-ACTIVE ERSIN FLUX

Actual performance proves it melts more rapidly due to thin-wall construction. Removes surface oxides, prevents reforming and will bond difficult metals safely, surely and economically.

TECHNICAL ADVANTAGES

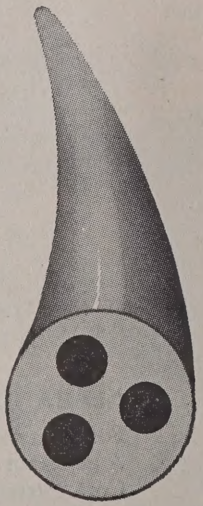
ERSIN FLUX

Ersin Flux is exclusive to Multicore and will not be found in any other solder. It is a high grade, water white rosin, homogeneously activated.

Ersin Flux has a vigorous fluxing action and possesses the non-corrosive and protective features of the original rosin. Soldered joints made with Ersin Flux do not corrode even after prolonged exposure to any degree of humidity. Ersin Flux reduces the surface tension of molten solder, causing it to wet metals rapidly, increasing speed of operation with resultant production economies.

Free from objectionable odor. Non-toxic in use.

Leaves nothing but pure rosin on the work after soldering, and may be used wherever plain rosin is specified.



MULTICORE SOLDER

Three separate cores of flux eliminate possibility of no flux in a portion of the wire, which may occur in single cored solder. Guaranteed continuity of the flux stream prevents "dry" joints, i.e., those having high electrical resistance.

Although there are three cores of flux in Multicore, the total percentage of flux to solder is less than many single cored solders.

Very rapid melting results from the multiple core construction which provides thinner walls of solder than are found in the same gauge single cored solder. Multicore's unique properties make perfect joints possible on difficult metalsand alloys, even if oxidized.

Ability to tin rapidly produces perfect joints with less solder. Greater coverage per pound.

PACKED BY "DECIMAL" SYSTEM

We have standardized our packages on the decimal system instead of in dozens, for ease in keeping inventory. All screwdrivers and nut drivers will be packed ten in a box, except where otherwise noted (exceptions are large sizes or slow moving items). Weights given above are correct to the nearest quarter-pound limit.

EASY TO SELECT SIZES. They are clearly marked on handles. For example, No. 144 means ¼″ dia. blade 4″ long. "R" or "S" signify round or square blades.

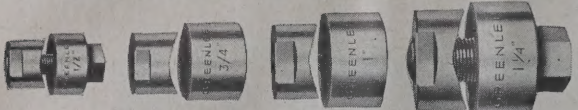
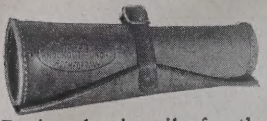
GREENLEE

KNOCKOUT PUNCHES AND CUTTERS

Greenlee Tool Co., Rockford, Illinois

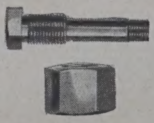




NO. 735 KNOCKOUT PUNCH SET

Designed primarily for the electrical trade to permit fast, easy enlarging of knockouts and cutting of holes for conduit in metal boxes and cabinets. Also excellent for automobile work where holes are needed for heater pipes and other accessories. Simply insert the tool in a knockout or small drilled hole and give the screw a few turns with an ordinary wrench. No. 735 set has four punches for cutting ⅞, $1\frac{3}{32}$, $1\frac{11}{32}$, $1\frac{11}{16}$-inch holes for ½, ¾, 1, 1¼-inch conduit. Set is neatly packed in leather case illustrated. The ½-inch punch will cut a ⅞-inch hole for ½-inch conduit where no standard knockout is provided when a $\frac{7}{16}$" hole is drilled.

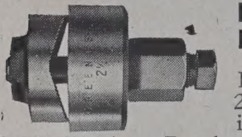
Heavy Duty Drive for ½" Punch



To increase length of service of the ½-inch Knockout Punch in cutting ⅞-inch holes in heavier-gauge sheet metals, the No. 1387 AV Drive Screw with No. 1388 AV Drive Nut illustrated is recommended.

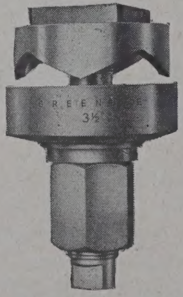
NO. 737 KNOCKOUT PUNCH SET

Similar to the No. 735 set, but consists of only two punches for cutting holes to accommodate 1½" and 2" conduit. Packed in leather case.



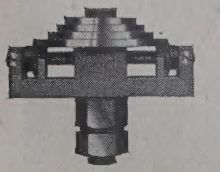
NOS. 738 AND 739 KNOCKOUT PUNCHES

For cutting holes to accommodate 2½" and 3" conduit. Design is similar to that of smaller GREENLEE Knockout Punches: insert in a knockout or drilled hole and turn drive nut with an ordinary wrench. Packed and sold individually.



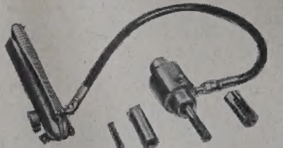
NOS. 741 AND 742 KNOCKOUT PUNCHES

For quickly making smooth openings for 3½" and 4" conduit. Hole is clean, no filing of burrs necessary. Operation is similar to that of other GREENLEE Knockout Punches. Simply insert in hole for 1" conduit and turn drive nut with an ordinary wrench.



No. 740 Knockout Cutter

Companion tool to GREENLEE Knockout Punches. Enlarges knockouts to take 1½, 2, 2½ and 3-inch conduit. Operation is simple since an ordinary wrench drives the tool. Cutting is done by the drive action of two wheel cutters. Special discs can be furnished for cutting odd sizes of holes from $1\frac{1}{16}$ to 3½-inch diameter. Packed in leather case.



NO. 7646 HYDRAULIC KNOCKOUT PUNCH DRIVER

A powerful portable hydraulic unit for driving all GREENLEE Knockout Punches. Also drives GREENLEE Radio Chassis Punches using ⅜" or larger drive screws. Quickly, easily cuts holes in 10-gauge metal. Excellent for use in tight places. Packed in metal case. List price complete, $86.50. Weight, 20 lbs.

WIDE SELECTION OF SHAPES AND SIZES

Shown above, are but a few of the many Rogan plastic knobs available to you from our regular stock molds. These are supplied without tool charge, resulting in considerable savings in cost, faster delivery. Choice of a wide selection of sizes, shapes and colors. Molded of phenolic or urea thermosetting materials, which will not soften, warp, or scratch easily. Heat resisting materials can be used so knobs can withstand 350-400° F. continuous heat. Most knobs supplied with 1/4" shaft hole and set screws. Special shaft hole sizes and means of fastening can be supplied to specifications at nominal cost.

KNOBS CAN BE BRANDED, AS REQUIRED

Rogan's famous "deep relief" branding process, applied after molding, provides sharp perfect marking at low cost. Any type marking, graduations or numerals can be branded on blank knobs to fit your requirements. Rogan knobs are available in black, brown or walnut, when molded of phenolic materials; and in all light pastel colors when molded of urea materials. Whatever your knob requirements may be, Rogan is equipped to supply you faster, better, more economically. The complete line of Rogan knobs with specifications is shown in the new Rogan catalog. Write for your copy now.

SNAP-ON DRAWER CO. MORROW, OHIO

Build Your Own Cabinets

WITH SNAP-ON DRAWERS

The sturdy, steel shells of the SNAP-ON DRAWER snap together on sides, top and bottom, with duplicate shells, to form a strong metal cabinet. No tools are required. Just place the metal buttons of one shell, directly over the holes, in the adjacent shell, and snap the buttons into place, one at a time.

If you wish to change the position of a drawer, the shells can be readily pried apart with a knife blade, and rearranged.

KLIPZON
TEST PRODS
WITH
MINI-PROD CONNECTORS

Type A

PRICE
$1.95

KLIPZON Type A Test Prods are designed for maximum time saving, convenience and safety. Self-holding jaws slip onto wires, lugs, terminals, and grip test points until pulled off. Streamlined, modern design adds minimum capacity to circuit; makes contact with inaccessible wires and terminals easy. Points fit into pin-jacks, sockets, binding posts; grip wires from finest to #12 B&S gauge. Points are needle sharp stainless steel in Duralumin holders. Handles, red and black, 4¾" long, of glossy Tenite. 4 ft., super-flexible rubber covered leads. With Type B Mini-prod Connectors as terminals. Solderless connection in handles.

Complete circuit diagram and instructions for use on reverse side of wrapper.

MINI-PROD CONNECTORS

Type V (MAROON) for VTVM
Type C (BLACK) for VOM

PRICE
$6.95

KLIPZON Type V&C High Frequency Crystal Probes bring added versatility to laboratory and service test equipment. Both types include Self Holding KLIPZON Test Points and Type B Mini-prod Connectors as terminals. Type V provides accurate means of measuring V.H.F. voltages with a vacuum tube voltmeter. Germanium crystal in low capacity. high impedance circuit, supplies rectified voltage to DC input. Complete shielding reduces hand capacity and antenna effect to minimum. Completely insulated. Reads to 200 Mc with 10% accuracy. Input capacity 3.5 Mmf, 400 V DC rating. Input resistance (approx.) .25 Meg-ohms @ 500 Kc, 150,000 Ohms @ 10 Mc, 25,000 Ohms @ 100 Mc. Reads .707 × positive peak of sinusoidal voltage. Type C adapts volt-ohm-milliammeters for indication and comparison of V.H.F. voltages. Has Gernanium crystal and suitable network of resistance and capacity for connection to DC circuit of VOM, with at least 200 Micro-amp. sensitivity.

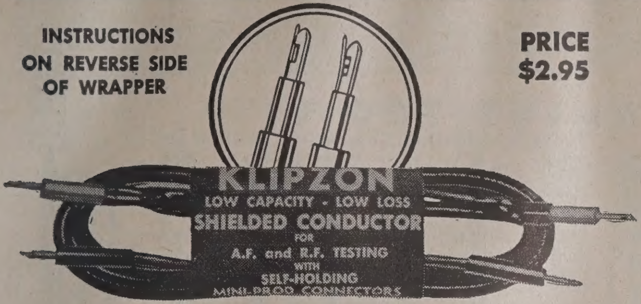
INSTRUCTIONS ON REVERSE SIDE OF WRAPPER



TYPE S

PRICE $2.95

KLIPZON Type S Shielded Leads provide a reliable means of piping audio or radio frequencies in laboratory or service work. Di-electric of air and poly-ethylene is proportioned to provide unusually low capacity and loss even at U.H.F. while retaining strength, durability and flexibility of the lead. Complete shielding of leads eliminates stray pickups, feed back and other undesirable coupling effects. Lead length is 3 ft., O.D. approximately 9/32", total capacity only 25 mmf. Provided with black Mini-Prod Connectors at each end of lead for complete grounding of shield and red Mini-Prods for connecting to circuit or instrument.

WALSCO Dial Cables and Cords are manufactured to meet the most rigid standards of the Government, Radio Industry and Engineering Laboratories. The finest raw materials are used and production is controlled to supply a uniform product with an absolute minimum stretch factor. All standard Cords are made with **NYLON** braid, known to have the highest abrasion resistance. These selected materials, plus special chemical treatment after fabrication, make WALSCO Cords the finest on the market. WALSCO Dial Cords are used by leading manufacturers as a standard component.

25-ft. and 100-ft. spools are packaged in clear plastic, re-usable storage boxes with sliding lids.

HEAVY CORD—Diameter .062″—Same as used on many Philco and Majestic sets. Very durable, and treated to prevent slipping.

No. 33	25 ft.	List Price $1.90
No. 33-1C	100 ft.	List Price 5.05

BRONZE CABLE—16-Strand Braided—Diameter .039″—Breaking Strength 50 lbs.—A braided cable with good flexibility and abrasion resistance. "Fiber-glass" is used as core material and the braid is constructed of special hard Cadmium bronze. Does not unravel.

No. 31	25 ft.	List Price $1.30
No. 31-1C	100 ft.	List Price 3.80
No. 31-5C	500 ft.	List Price 15.40

PHOSPHOR BRONZE CABLE—42-Strand—Diameter .032″—Breaking Strength 60 lbs.—A very flexible metal cable constructed of 42 strands of hard Phosphor bronze over a "Fiber-glass" core. Extremely durable. Used for replacement of dial cables and many special applications where a strong, stranded cable is required.

No. 30	25 ft.	List Price $1.65
No. 30-1C	100 ft.	List Price 5.50
No. 30-5C	500 ft.	List Price 22.00

SPECIAL THIN BRONZE CABLE—Diameter .022″—An extra-thin cable for dial drives, flexible connections, pigtails, and many other applications—wherever a thin, but strong cable is required.

No. 32	25 ft.	List Price $1.40
No. 32-1C	100 ft.	List Price 4.95
No. 32-5C	500 ft.	List Price 14.30

The following cords cover over 80% of the replacement demand. With one spool of each kind on hand, the serviceman has the proper size for practically any set manufactured since 1934. Constructed with "Fiber-glass" or linen core and "pre-stretched," these are the most efficient cords available. The braided sleeves are made of Nylon.

WALSCOLUB - B

Counteracts oxidation, prevents corrosion of metals and eliminates noise on band switches, push buttons, tuners, volume and other controls, as well as air-exposed electrical contacts, attenuators, etc. Will not change electrical properties. It is superior to any graphite compound for this purpose. Ideal on metal surfaces to prevent rust. Large, handy applicator tube.

Cat. No.	List Price
22—1¾ oz. tube	$0.65

Available also in 1 lb., 5-lb. and 25-lb. containers for industrial users. Prices on request.

WALSCO "LUBRIPLATE"

The latest development in chemicals for lubricating purposes. Much superior to ordinary greases because of its higher lubricating and lasting qualities. Its viscosity does not appreciably change with temperature. Used on phonograph motors, record changers, switches, and all appliances that require a grease-type lubricant. In large handy "applicator" tube.

Cat. No.	List Price
23-A—2 oz. tube	$0.65

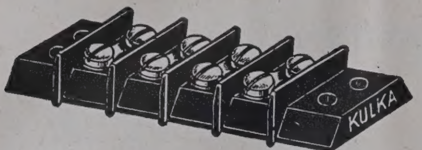
HEAVY DUTY BAKELITE BARRIER TERMINAL STRIPS

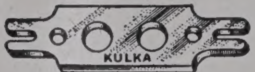


This latest type of construction of bakelite strip is made of molded bakelite of very high tensile strength. The barriers between each terminal prevent any possibility of short circuits and leakage between terminals. The terminals and screws are brass, nickel plated. The strips are manufactured by the KULKA ELECTRIC MFG. CO. INC., Design Patent No. 136, 762 and are exclusively distributed by us to the Radio Parts Distributors.

COLUMN A

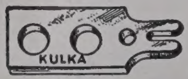
All the Barrier Terminal Strips enumerated in this column for the 600, 601, 602 and 603 series are made with the screw type terminals exactly as shown in the illustration at top of the page.

COLUMN B



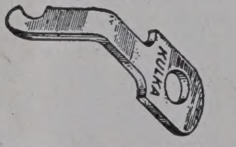
All the Barrier Strips enumerated in this column 600, 601, 602 and 603 series are supplied with the two-solder connection lug illustrated above.

COLUMN C



All the Barrier Strips enumerated in this column 600, 601, 602 and 603 series are supplied with the one-solder connection lug illustrated above.

COLUMN D



All the Barrier Strips enumerated in this column for the 600, 601 and 602 series are supplied with the bottom type connection lug illustrated above.

The 603 series of Barrier Strips not shown here are heavy duty strips with thick barriers and cross sections. They will take up to 35 amps of current and are ideal for heavy duty electrical control units such as spot welding machines, molding equipment, etc., or any place where a rugged heavy duty terminal block is needed for heavy amperage. Height: ¾", Width: 1 13/16" (incl. barrier), Terminals on Center: 11/16", Base (thickness): 7/16", Mounting Hole Spacing ⅝" (has 3 holes), Screws: 10-32 x ⅜" long with binding head.

No. 600 SERIES

Height 11/32", Width ⅞", Thickness ¼". Terminals are ⅜" on centers. Screws 5-40x¼" long, Binding Head.

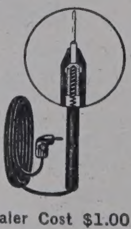
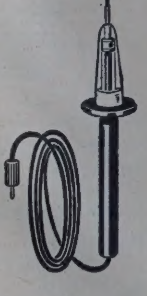
ICA SAFE-T-TESTER



A new, unique, non-shorting prod that makes contact only when pressure is applied to barrel. Ideal for cramped spaces where probing is necessary. Specially applicable to television needs.

No. 446..........................**Dealer Cost $1.00**

"KILOVOLTER" MULTIPLIER PROBE



A skilfully-made probe that combines the finest high voltage design principles with precision fabricating—a superb multiplier probe whose efficiency . . . sturdiness . . . popular price, is beyond compare.

Equipped with 15 K.V. range multiplier that provides full range PLUS existing meter voltage. For example, use of the ICA probe will increase the range of a 5,000 volt range voltmeter to 20,000 volts full scale.

The three (3) built-in 1% resistors (totaling 6 watts dissipation) are coaxially mounted, providing air-spacing to further assure heat dissipation and a completely insulated probe.

Highest grade components include sturdy thermo-plastic barrel with safety finger guard and sealed ends. Over-all length: 8½". Supplied with 5-ft. heavy duty lead with insulated phone tip.

No.		Dealer Cost
6167	20,000 ohms per volt (50 micro amps. meter movement)	$6.95
6168	10,000 ohms per volt (100 micro amps. meter movement)	6.95
6169	5,000 ohms per volt (200 micro amps. meter movement)	6.95

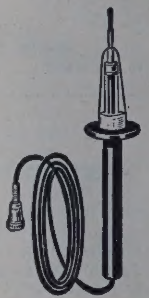
NOTE: Probe of special resistance values up to 2000 megohms are available on order to quantity users.

NEW 30-KV PROBE

Similar to the Insuline "Kilovolter" No. 6167 above, for 20,000 ohm per volt, 50 micro amp. meters only. A precision instrument . . . 600 megohms 2% high voltage multiplier

No. 6220..**Dealer Cost $7.95**

THE INSULINE "100 X" MULTIPLIER PROBE



A new 30KV to 50KV Multiplier Probe (Internal resistance 1090 megohms). For ALL 10 to 11 megohm input instruments.

This VTVM probe will multiply existing meter ranges by a factor of 100; thus, if the top range of the instrument is 300 volts, meter will read 30,000 volts with probe. If top range is 500 volts, meter with probe will read 50,000 volts.

A few of the most popular VTVM's with which this probe may be used follows:

30-KV TOP RANGE

RCA No. WV65A; WV75A; 165A Electronic Design
Heath No. V1; V2; V2A; V4 Radio City 664; Reiner 661; Triplett 2541

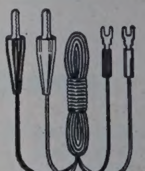
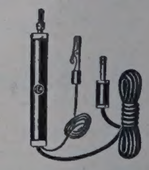
HEAVY DUTY "CLIP-ON" TEST LEADS



Heavy duty test leads of the "clip-on" type for use with binding post type instruments. Includes a heavy gauge nickel-plated brass insulated spade terminal which will fit screws or binding posts up to 3/16" in diameter. The sturdy battery-type spring clips are covered with protective sleeve for safe operation. The pair consists of a 48" red and black lead with tenite insulation.

No. 327..........................**Dealer Cost $1.20**

RF AND SIGNAL TRACER PROBE



Germanium Crystal Circuit. Assures accurate analysis of circuit defects. May be used with audio amplifier for audible tracing or with V.T.V.M. for RF and AF measurements. Low input capacitance. The ideal probe for the audio section of television circuits. The sturdy bakelite barrel has sealed tenite ends with solderless phone tip and includes 48" RG59/U coaxial cable with phone plug and 18" rubber covered ground lead with alligator clip.

No. 4310..........................**Dealer Cost $4.95**

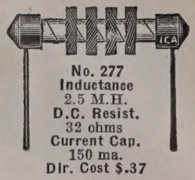
INSULEX R.F. CHOKE COIL

HIGH FREQUENCY. Consists of four narrow sections each universally wound spaced on an Insulex form. Designed especially for high frequency receivers.

Low distributed capacity. Supplied with wire leads for mounting. May be mounted in grid leak clips.



ICA INSULEX R.F. CHOKES

Can be used in any circuit or position. Designed particularly for short wave but equally effective over the broadcast band. Insulex forms are used with a special Radio Frequency Lacquer for impregnation and ample moisture proofing. Solder lugs for firm electrical and mechanical contacts.

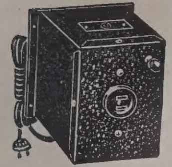
FILTERVOLT NOISE FILTER



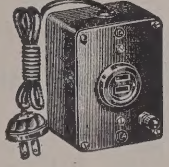
An efficient filter for disturbances caused by electrical appliances. For use with any all-wave or broadcast receiver.

Rated conservatively at 250 watts for 32, 110 and 220 volt AC or DC circuits. Can be installed either at the radio or at the source of disturbance.

Contains heavy duty R.F. chokes, large filter capacitor, and has a "PI" Filter circuit arrangement.

No. 338.............................**Dealer Cost $5.00**

ICA FILTERVOLT



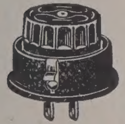
Improves extremely noisy radio reception due to interruptions in power line caused by electrical appliances, lights, etc.

No. 394

Dealer Cost $3.00

SIMPLEX FILTERVOLT

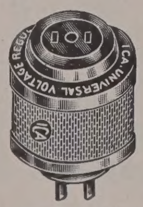
Eliminates Radio Noises Caused By—



- Electric Shavers
- Refrigerators
- Fans ● Elevators
- Motors, etc.

No. 90..............................**Dealer Cost $1.17**

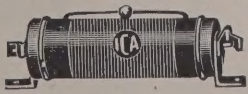
UNIVERSAL VOLTAGE REGULATOR



Voltage fluctuation often occurs not gradually but suddenly, thus bringing a tremendous strain on the tubes. This regulator protects tubes through scientific regulation of current fluctuations. Housing body and end rings are neatly constructed and of perforated japanned metal. For all Radio Sets, AC, DC.

No. 92..............................**Dealer Cost $1.17**

ICA 3-IN-1 RADIO TUNER



Functions as either an Antenna Tuner, Wave Trap, or Aerial Eliminator. Operates on any make or model radio set.

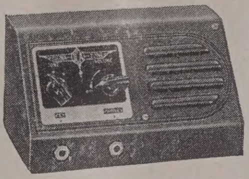
As an Antenna Tuner, it will improve the reception of a weak station. As a Wave Trap, it will separate interfering stations and improve selectivity. As an Aerial Eliminator, it makes unnecessary the outdoor aerial. Easily installed within a few minutes.

No. 93..................................**Dealer Cost $.60**

Complete with Instructions.

IMPROVED ICA DELUXE SIGNA-TONE

AUDIO OSCILLATOR — CODE PRACTICE SET — KEYING MONITOR



The ICA Signature is a perfected Audio Oscillator, having 3 different output frequencies and a continuously variable volume control. The Audio notes are similar to those of high quality commercial CW stations.

1. CODE PRACTICE SET—A number of phones and keys may be connected for intercommunication or for classroom or radio club instruction in code.

2. KEYING MONITOR—An invaluable aid in improving any ham's "fist." Will follow the "bug" at all speeds. No well-equipped station should be without this keying monitor. (A double pole keying relay is required for this function—one set of contacts for keying transmitter; other set for monitor.)

3. MODULATION SIGNAL—The steady note of the Signature is ideal for adjusting both the Modulator and modulated stages of your transmitter for 100% modulation.

4. SIGNAL TRACER—By feeding the output of the Signatone into each stage of your modulator and listening to the output of that stage, defects and "bugs" can easily be located. Complete with 50B5 and 35W4 tubes and self-contained speaker for 110 V AC-DC.

No. 4300—Dealer Net Cost...**$15.75**
No. 4301—Classroom Model (No Speaker)—Dealer Net Cost.......................... **13.50**

INSTRUCTIONS — FOR MEASURING BELTS

To determine size of belt. if the old belt is available, cut the belt and measure for stretched out length. This will be "cut length" of belt.

If old belt is not available or is worn out so that it cannot be properly measured, stretch a thin thread around belt pulleys on set. (Be sure to use thin thread as a thick cord will give an inaccurate reading.) Measure the thread, it will be our "circumference around pulleys." In measuring belts always remember that the **circumference around pulleys** is not the same as **stretched out or cut length.** A belt when cut, develops approximately 3/16" extra length when stretched out, depending on thickness of belt.

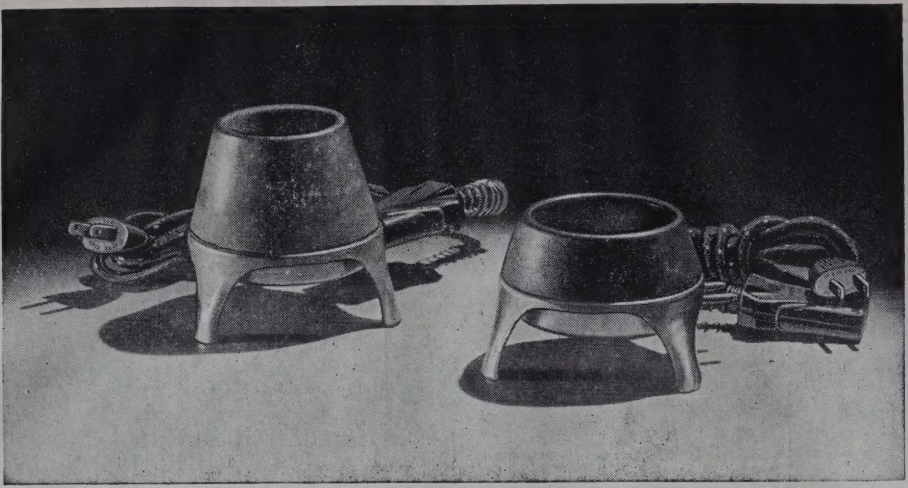
LECTROHM SOLDER POTS



FOR PRODUCTION-LINE TINNING OF SMALL WIRES and PARTS

- ***Individual Pots for Each Operator***
- ***Sturdy Construction***
- ***Two Sizes — 1¾ and 2 lb. Capacity***

Here at last is an electric solder pot good for long life in production-line tinning yet inexpensive enough for only occasional use. Available in 1¾ and 2 lb. capacities, these pots are ideal for continuous operation in radio, motor and other electrical equipment plants where individual solder pots are required. By using a rheostat, Lectrohm Solder Pots can be used from 100 watts, for melting waxes and compounds, to 450 watts for maintaining solder at 850° F. Only small amounts of solder need be melted at a time, depending upon your requirements.

Lectrohm Solder Pot is composed of cast iron pot mounted by a single screw on a cadmium-plated steel stand. Single-heat, porcelain nickel-chrome heating element (easily and inexpensively replaced) heats the pot. The unit operates on 110 v. AC or DC but can be had for any specified voltage. Furnished with 6′ Underwriters' approved cord and attachment plug. Spare elements of special wattages are available.

SPECIFICATIONS

No.	Solder Cap. in Lbs.	Height Overall	Diam.	Cup Depth	Wattage	Element

FUSED PLUGS

COMPLETE PROTECTION!

The Elmenco Fused Plug is like any standard plug, is light in weight, but easier to handle because of finger grips. However, it contains 2 small fuses which provides complete protection against damage to the appliance and to the main line. The blown fuse is easy to remove and simple to replace. Fits any standard wall outlet.

NEW MARKETS! GREATER VALUE!

Approved by Underwriters Laboratories and used by many of the largest manufacturers of radio and electronic equipment, battery chargers, washing machines, curling irons, lighting equipment, automatic relay equipment, motors of every description, and practically every other type of product that consumes electricity.
Every wired home, office and store is a prospect.

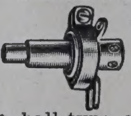
PLANETARY DRIVES



The ball-type planetary drive units on this page are useful whenever a compact device is needed for reduced-speed operation. Ratio approximately 5 to 1. May be used as auxiliaries or incórporated in new construction. All units have hubs to fit ¼" instrument shafts.

No. 599 is a precision device used for both military and civilian production. Can be used as a single-speed drive by omitting knob on the high-speed sleeve.
List Price $8.00

No. 27067 same as No. 599 described above except for threaded sleeve.
List Price $12.65

No. 6665 Knob fits either of the units above. Larger knob is anodized aluminum. Smaller knob is black butyrate with brass insert.
List Price $1.25
